RE: Public Comment on Proposed Revisions to Renewable Energy Portfolio Standard (225 CMR 14.00)

Dear Mass DOER board,

My name is Robin Unger and I attended the meeting in Boston on June 28th, 2006 and spoke with you about my concern in allowing C&D to be used as a "Clean" and "Eligible" fuel source for Biomass plants. I am disturbed that Massachusetts would even be consider allowing this to happen and I ask you to follow New Hampshire's lead and not allow our state to become a dumping ground for the profit of a few, allowing insurmountable harm to the Residents of Massachusetts. As I mentioned at the Meeting on June 28th, the air quality in Massachusetts is already zoned a grade "F", the lowest grade given by the American Lung Association. It does not make sense to down grade our air quality an even lower standard, just to benefit the few. I understand that C&D has to go somewhere but burning it cannot be considered one of those options. Your board needs to remember the most vulnerable residents and imagine your child, grandchild, parents, grandparents, or even yourself as an abutter to the Biomass plant that would burn treated waste pallets and C&D. You would be exposing your family to harmful toxic chemicals that in no way can be burned safely. On behalf of all Massachusetts Residents, I implore you not to allow such a travesty. Our future rests in your hands.

THANK YOU,

Robin L. Unger
