Hello SMART program,

I would like to voice my opinion about changing regulations to incentivize solar installations.

I am all for solar. Massachusetts, the nation, and the world need to move fast to limit the climate catastrophe. However, that urgency does not mean we should be creating incentives to build solar in green fields. Every landfill, parking lot, and shopping center in the commonwealth should be blanketed with solar before we touch any functional ecosystems for large scale solar.

Please bear this in mind while designing your regulations.

Also please try to structure regulations to encourage solar development by local companies. Enough of the economy has already been farmed out to giant corporations. Let's keep the money local!

Thanks for your attention to these vital matters.
