---

Hello,

I would like to receive documentation on the topic. However, I would like it to me known that I oppose Solar Installation clearing forestry to benefit Developers.

Coupled with the risk of abandonment and environmental concerns stemming from aforementioned, I also (due to my career) understand the complications from the impacts to the Utility. Namely, costly upgrades that result from these installations, that may get ignored during Impact Studies but fall on the Utility (and therefore, customer bills) after the Sites go up and running.

Thank you,
James
