Importance:	High

To Whom It May Concern:

I am very concerned about the problem caused by people who install solar panels which generate electricity for which they are credited by the utility at retail electric rates.
The effect of allowing this practice is that such people are not paying for the cost of maintaining the electric power grid upon which they rely when the sun is not shining. As the
number of people who install solar panels increases, the cost of maintaining the electric power grid will increasingly fall upon those people and businesses that have not
installed solar panels which will be disproportionately impact the poor. All electricity users should be paying for maintaining the power grid that we all reply upon.
