As a homeowner who installed rooftop solar 5 years ago, I am interested in expanding my production to provide for increased electric energy use because of a planned purchase of an electric vehicle in the next year or two. Incentives to make this purchase affordable are very important to me.

In addition, I feel the state should continue to be a leader in this field for environmental, economic and energy independence reasons.

Please do all you can to promote the continued development of this clean source of renewable energy that allows homeowners to be part of the solution for global climate change.
