Good Morning! I am compelled to write you today in opposition to any program that does NOT encourage renewal resources.

And while solar is ONE of our best bets currently, regarding out climate crisis, it is imperative that we do it responsibly.

Rural areas are being targeted by out of state Big Solar companies, to sell off our woodlands for solar.

This is HUGELY WRONG!!!!

We need our older trees, as they do the biggest job in sequestering the carbon that is killing us and our planet.

Please act with wisdome & foresight and only allow solar to be out on top of buildings and parking lots, where our natural world is only minimally compromised.

Please look at the Bigger Picture.. the time is Neigh!!!!

Thank You!
Shelley
