Date sent: Tue, 21 Oct 2003 10:39:41 -0500

Gary,

Any thoughts on what's a reasonable max rating to use for these assets.

The market system warns meter readers if they've submitted a value that's 1.25 times the max rating (This is only thing the max rating is used for).

Go Green!

Dave

<<NSTAR Green final draft.doc>>

00306

FINAL DRAFT

NSTAR TO ADD GREEN POWER OPTION TO LIST OF CUSTOMER CHOICES

NSTAR Green to meet 25 percent of electricity needs from new renewable sources

(Boston, MA. October 16, 2003). NSTAR today filed with the Massachusetts Department of Telecommunications and Energy (DTE) to offer customers a new, environmentally-sound energy option for their homes or businesses. If approved, *NSTAR Green* would meet 25 percent of a customer's electricity needs from new, renewable energy resources. Choosing green power sources, including wind, solar and hydro, reduces reliance on fossil fuels to meet the region's power needs.

"*NSTAR Green* is a significant step forward in promoting renewable energy options," said Joseph R. Nolan, NSTAR's Senior Vice President of Customer Care & Corporate Relations. "NSTAR is committed to offering our customers an increasing number of choices to meet their electricity and customer service needs."

NSTAR responded to customer requests for a green power offering and has worked to make *NSTAR Green* a one stop shopping option. Once approved by the DTE, participation will be as easy as calling NSTAR to enroll. NSTAR is administering *NSTAR Green* by partnering with regional green power providers. Customers can continue to contact NSTAR for all their customer service needs.

NSTAR Green is available to NSTAR residential and small commercial customers who receive either Standard Offer Service or Default Service. NSTAR is currently negotiating with green electricity suppliers for the best possible price for this premium service. As with current Standard Offer and Default Service rates, NSTAR will make no profit on the *NSTAR Green* option.

To further promote renewable resources, NSTAR also announced plans to install 2,000 watts of solar panels on the roof of their Westwood office building. This commitment to promoting green power technology will also provide a training site for the solar power industry, as well as opportunities for future technology development.

NSTAR is Massachusetts' largest investor-owned electric and gas utility. NSTAR, headquartered in Boston, transmits and delivers electricity and natural gas to 1.4 million residential and business customers in more than 100 Eastern and Central Massachusetts communities. For more information about NSTAR, visit: www.nstaronline.com.

Subject: RE: pricing on 2004 wind certificates?

Anna,

Thanks for thinking of us, but we don't anticipate having any available. We hope that our green power sales efforts through National Grid, and our continued sales of New England Wind to small consumers will account for all of our current Hull wind supply. I will let you know if there are any changes.

On another note, I am interested to know what pricing you are seeing for new landfill gas at some point. Do you have access to any LFG certificates?

In an attempt to solidify the implementation of the pending green power offering.

There has been several discussions regarding different approaches but have not been feasible do to $$ involved...

We are currently examining a stop gap process that may allow the program to be implemented in "transition"....

I would urge you or a representative attend to have all business functions sign off.

We would like to schedule a meeting ASAP..
We have 1:30 blocked for meeting in SW3F ...
Could you let me know your availability....

A second choice would be later this afternoon..3:30 or 4:00....

Sorry for the short notice

Thanks

Steve

Dave

The earliest we would need the assets up and running would be Jan 1, 2004. But we are still unsure if the product will be ready for a January 1 roll-out, or if it will be pushed to February (or later).

Is the Jan 1 date still achievable from your perspective?

00324

NSTAR GREEN POWER ADJUSTMENT

DEFINITIONS

"Customer" shall mean any person, partnership, corporation, or any other entity, whether public or private, who obtains Distribution Service at a Customer Delivery Point and who is a Customer of record of the Company.

"Customer Delivery Point" shall mean the Company's meter or a point designated by the Company located on the Customer's premises.

"Default Service" shall mean the service provided by the Distribution Company to a Customer who is not receiving either Generation Service from a Competitive Supplier or Standard Offer Service, in accordance with the provisions set forth in this tariff.

"Distribution Company" or "Company" shall mean Boston Edison Company.

"Distribution Service" shall mean the delivery of electricity to the Customer by the Distribution Company.

"Generation Service" shall mean the sale of electricity, including ancillary services such as the provision of reserves, to a Customer by a Competitive Supplier.

"M.D.T.E." shall mean the Massachusetts Department of Telecommunications and Energy.

"NE-GIS" shall mean the New England Generation Information System, which includes generation information database and certificate system operated by the New England Power Pool.

"NE-GIS Certificates" shall mean documents produced by the NE-GIS that identifies the relevant Genration Attributes of each mwh accounted for in the NE-GIS.

"NSTAR Green" shall mean the service provided by the Distribution Company to customers who selects a generation mix of renewable power.

"New Renewable Generation" shall mean the electrical energy output of a New Renewable Generation Unit or that portion of the electrical energy ouput of a Generation Unit that qualifies under a Vintage Waiver, pursuant to 225 CMR 14.05 (2), or a Co-firing with Ineligible Fuel Waiver, pursuant to 225CMR 14.05 (3).

"New Renewable Generation Unit" shall mean a generation unit that has received a Statement of Qualification from the Massachusetts Division of Energy Resources..

NSTAR GREEN POWER ADJUSTMENT

DEFINITIONS (continued)

"Standard Offer Service" shall mean the service provided by the Distribution Company to a Customer who is not receiving either Generation Service from a Competitive Supplier or Default Service, in accordance with the provisions set forth in the Company's Standard Offer Service tariff, on file with the M.D.T.E.

AVAILABILITY

NSTAR Green service shall be available to any residential or small commercial & industrial Customer (rate classes R-1, R-2, R-3, R-4, G-1, G-2, T-1, S-1, S-2 and S-3) who is receiving Standard Offer Service or Default Service. Service under this rate to any Customer is subject to both the Company's printed requirements and the Company's Terms and Conditions - Distribution Service, each as in effect from time to time.

APPLICABILITY

Electricity delivered under this Rate Schedule shall be used solely by the Customer on the Customer's own premises for all purposes.

CHARACTER OF SERVICE

Electric service delivered hereunder shall be single or three phase, alternating current, at a nominal frequency of sixty hertz, and at a locally available primary or secondary distribution voltage.

RATE ADJUSTMENT

The rate adjustment for NSTAR Green service, effective January 1, 2004, shall be equal to [X] per kilowatt-hour which shall be added to the applicable supplier services rate for Standard Offer Service or Default Service.

INITIATION OF NSTAR GREEN SERVICE

A Customer that elects the NSTAR Green service provided under this tariff, must notify the Company two (2) or more business days before the next scheduled meter read date to initiate service. If notification is fewer than two (2) days before the Customer's next scheduled meter read date, the NSTAR Green service shall be initiated concurrent with the Customer's subsequent scheduled meter read date.

NSTAR GREEN POWER ADJUSTMENT

TERMINATION OF NSTAR GREEN SERVICE

NSTAR Green service may be terminated by a Customer concurrent with the Customer's next scheduled meter read date provided that notice of termination service by a Customer or Competitive Supplier is received by the Company two (2) or more business days before the next scheduled meter read date, in accordance with the Company's Terms and Conditions for Competitive Suppliers.

If the Company receives the notice of termination of NSTAR Green service by the Customer or the Competitive Supplier fewer than two days before the Customer's next scheduled meter read date, NSTAR Green service shall be terminated concurrent with the Customer's subsequent scheduled meter read date.

There shall be no fee for terminating NSTAR Green service.

Gary.....

I looked over that material and added several definitions.
I have attached a copy of the revised tariff (see red inserts).

However, I am not sure this is what Ellen had in mind. I think she mentioned that there might have been some language in the rfp that would support our "green power"....

let me know what you think.....

Steve

00328

NSTAR GREEN POWER ADJUSTMENT

DEFINITIONS

"Customer" shall mean any person, partnership, corporation, or any other entity, whether public or private, who obtains Distribution Service at a Customer Delivery Point and who is a Customer of record of the Company.

"Customer Delivery Point" shall mean the Company's meter or a point designated by the Company located on the Customer's premises.

"Default Service" shall mean the service provided by the Distribution Company to a Customer who is not receiving either Generation Service from a Competitive Supplier or Standard Offer Service, in accordance with the provisions set forth in this tariff.

"Distribution Company" or "Company" shall mean Boston Edison Company.

"Distribution Service" shall mean the delivery of electricity to the Customer by the Distribution Company.

"Generation Service" shall mean the sale of electricity, including ancillary services such as the provision of reserves, to a Customer by a Competitive Supplier.

"M.D.T.E." shall mean the Massachusetts Department of Telecommunications and Energy.

"NE-GIS" shall mean the New England Generation Information System, which includes generation information database and certificate system operated by the New England Power Pool.

"NE-GIS Certificates" shall mean documents produced by the NE-GIS that identifies the relevant Genration Attributes of each mwh accounted for in the NE-GIS.

"NSTAR Green" shall mean the service provided by the Distribution Company to customers who selects a generation mix of renewable power.

"Renewable Generation" shall mean the electrical energy output of a Renewable Generation Unit.

"Renewable Generation Unit" shall mean a generation unit that uses any of the fuels, energy resources or technologies set forth in 225 CMR 14.05 (1)(a), Naturally Flowing Water and Hydroelectric, or waste-to-energy that is a component of conventional municipal solid waste plant technology in commercial use.

NSTAR GREEN POWER ADJUSTMENT

DEFINITIONS (continued)

"Standard Offer Service" shall mean the service provided by the Distribution Company to a Customer who is not receiving either Generation Service from a Competitive Supplier or Default Service, in accordance with the provisions set forth in the Company's Standard Offer Service tariff, on file with the M.D.T.E.

AVAILABILITY

NSTAR Green service shall be available to any residential or small commercial & industrial Customer (rate classes R-1, R-2, R-3, R-4, G-1, G-2, T-1, S-1, S-2 and S-3) who is receiving Standard Offer Service or Default Service. Service under this rate to any Customer is subject to both the Company's printed requirements and the Company's Terms and Conditions - Distribution Service, each as in effect from time to time.

APPLICABILITY

Electricity delivered under this Rate Schedule shall be used solely by the Customer on the Customer's own premises for all purposes.

CHARACTER OF SERVICE

Electric service delivered hereunder shall be single or three phase, alternating current, at a nominal frequency of sixty hertz, and at a locally available primary or secondary distribution voltage.

RATE ADJUSTMENT

The rate adjustment for NSTAR Green service, effective January 1, 2004, shall be equal to [X] per kilowatt-hour which shall be added to the applicable supplier services rate for Standard Offer Service or Default Service.

INITIATION OF NSTAR GREEN SERVICE

A Customer that elects the NSTAR Green service provided under this tariff, must notify the Company two (2) or more business days before the next scheduled meter read date to initiate service. If notification is fewer than two (2) days before the Customer's next scheduled meter read date, the NSTAR Green service shall be initiated concurrent with the Customer's subsequent scheduled meter read date.

NSTAR GREEN POWER ADJUSTMENT

TERMINATION OF NSTAR GREEN SERVICE

NSTAR Green service may be terminated by a Customer concurrent with the Customer's next scheduled meter read date provided that notice of termination service by a Customer or Competitive Supplier is received by the Company two (2) or more business days before the next scheduled meter read date, in accordance with the Company's Terms and Conditions for Competitive Suppliers.

If the Company receives the notice of termination of NSTAR Green service by the Customer or the Competitive Supplier fewer than two days before the Customer's next scheduled meter read date, NSTAR Green service shall be terminated concurrent with the Customer's subsequent scheduled meter read date.

There shall be no fee for terminating NSTAR Green service.

Gary....
I got a call from your "boss" Ellen....

She said the only comment the AG had about the tariff
is there was no definition regarding the certificate...

She mentioned you or James would have it and it should reference
225 cmr 14 (I think that is what she said)..

Steve

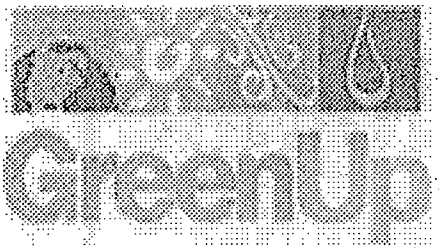
Patriot Ledger (Quincy)
September 19, 2003

Energy program aims to aid environment

By Justin Graeber



Mass. Electric CEO Cheryl LaFleur introduces the GreenUp program in Quincy yesterday. The program allows customers to choose to have some of their energy come from renewable sources.

Quincy – In what Quincy Mayor William Phelan called a first step toward cleaner energy, Massachusetts Electric launched its GreenUp program yesterday. The program, the first of its kind in New England, will allow Mass Electric customers to choose whether some of their energy comes from renewable sources such as wind, biomass, solar or small hydroelectric power plants.

Mass. Electric customers will receive an insert in next month's bill explaining the GreenUp program. For an extra $6 to $12.50 a month, consumers can choose to have some of their energy sources provided by one of four companies: CET & Conservation Services Group, Inc.; Community Energy; Mass. Energy Consumers Alliance; and Sterling Planet.

Massachusetts Electric does not profit from providing GreenUp for customers.

"The goal of the project is to make it as easy as possible," Mass. Electric CEO Cheryl LaFleur said.

Larry Chretien, executive director of Massachusetts Energy Consumer Alliance, said, "It's going to take some time to educate people about renewable energy. We find that the more people understand it, the more they want to support it."

Chretien, a former Quincy city councilor, is no stranger to environmental activism. Several years ago, he helped create Quincy's recycling program, which as since become a model for neighboring communities. He cites the pro-environment policies of former President Jimmy Carter as a major influence.

"In college, I was reading books saying that by the 1980's renewable energy was going to be prevalent," Chretien said. "We're not where we should be."

Phelan is one of the first customers to sign up for the program. "It's appropriate that individuals are now able to purchase renewable energy," he said.

The program also applies to small businesses. Several speakers at the launch of the program yesterday praised Quincy for its recycling program and for the cleanup of Wollaston Beach.

"Quincy has a proud tradition of individuals who are environmentally sensitive," Phelan said. "They really stepped up to the plate."

Phelan arrived at the Thomas Crane Public Library in a gas/electric hybrid car.

Robert Varney, regional administrator of the Environmental Protection Agency's New England office, spoke of a "dual-track" approach to cleaner energy. The first track is to clean up older power plants. Varney said 26 new plants in Massachusetts are operating under stricter emissions regulations. The second approach is to promote renewable energy sources as an alternative to fossil fuel consumption and nuclear power.

"The Commonwealth of Massachusetts has been a real leader," Varney said. "But there is so much more we can do."

Douglas Foy, chief of the Office of Commonwealth Development, was introduced as "one of the Founding Fathers" of renewable energy policy by LaFleur.

Foy spent 25 years as president of the Conservation Law Foundation.

"Climate change is the ultimate environmental problem," Foy said.

"One kilowatt hour of power from fossil fuels produces one pound of carbon dioxide," he said. "One trillion kilowatt hours of wind power produces zero pounds of carbon dioxide."

The GreenUp program is a byproduct of a 1997 state law called the State Renewable Portfolio Standard. The law mandates that at least 1 percent of a company's energy pool must come from renewable sources. That percentage must increase to 4 percent by 2009.

Participating in the program does not mean that the energy running through a consumer's home will come from renewable sources. Chretien likened the energy pool to a bathtub. "What gets put into that bathtub depends on what the consumer chooses," he said.

Chretien noted that the four energy suppliers will be on their own to drum up customer support.

"Today was a first pitch of the ball game," he said. "Everyone's aware we have an energy crisis, but most aren't aware what they can do about it."

The amount of renewable energy that groups can supply depends on consumer interest.

"For about 50 cents a day, you can make a dramatic difference in the environment," Chretien said.

NSTAR

NSTAR Green

A New Choice for NSTAR Customers

September 26, 2003

000398

What is NSTAR Green?

- Offering for residential and small commercial customers
- Standard offer and default customers
- Green energy represents 25% incremental of customers' energy usage

The program design offers our customers a simple choice.

NSTAR

00339

Why Offer NSTAR Green?

Surveys and focus groups indicated customers -

- Want to do their part
- Need easy ways to participate
- Have not seen other offerings
- Nationwide programs have seen success, typically with participation at 1%

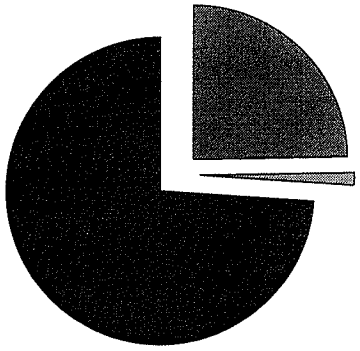
We believe our unique demographics support a higher percentage of customers choosing green options.

NSTAR

00340

How will NSTAR Green Work?

- Customers who enroll will have 25% of their electricity come from new renewable resources. A minimum of 5% will come specifically from solar and/or wind



- Customers can add or drop this optional service by notifying NSTAR up to 3 days prior to the next meter read

- Premium may be eligible for a federal tax deduction

NSTAR

00341

How Does NSTAR Green Support the Green Market?

- Consists only of New Renewable generation
- Minimum of 5% solar and/or wind
- Increases customer participation and awareness
- Supports development of robust renewables market

NSTAR Green will create demand for additional green generation in New England.

00342

NSTAR

How Does NSTAR Green Support Restructuring?

- Raises customer awareness by the introduction of more choice
- NSTAR Green will be a stimulus for the residential competitive market
- Consistent with DTE policy by only offering to residential and small commercial
- Provides a catalyst for additional innovative products from competitive suppliers

Choice creates awareness, awareness fosters competition

NSTAR

NSTAR Green based on Massachusetts Standards

- NSTAR Green is defined as certificates created through New England – Generation Information System (NE – GIS) that qualify as New Renewable Generation under 225 CMR 14.00
- NSTAR will purchase incremental certificates equal to 25% of the load of each participating standard offer or default supply customer
- Certificates will be procured annually through a competitive bidding process

Use of existing standards facilitates supplier understanding

NSTAR

Relies on Existing Infrastructure

- All qualifying generation including solar photovoltaic, solar thermal, wind, ocean thermal, wave or tidal energy, eligible fuel cells, landfill, digester gas, and eligible low emission biomass can satisfy requirements
- Minimum requirement of 5% solar or wind
- Certificates will be matched with customer load on a quarterly basis
- Distinct Energy Labels will be created for the NSTAR Green customer reflecting their energy mix

Use of existing infrastructure facilitates tracking

NSTAR

00345

In Closing…

- Supports development of robust new renewable energy market
- Serves as market catalyst to help create a competitive market
- Offers a simple option for customers to 'do their part'

NSTAR is in the business of serving our customers well.

Date sent: Wed, 24 Sep 2003 16:37:48 -0500

To all,

Revised action items with comments included.

1) Meet with AIM, MassPIRG, and CLF to discuss potential issues and support (and possible endorsement) for filing -- Mark Reed

2) Meet with MTC to discuss potential issues and support for filing -- James Daley, Bob Werlin, Jack Habib
3) Meet with AG and DOER to discuss potential issues and support for filing -- Penni Conner and Ellen Angley
4) Sample Rate Calculation (Agreed no bad debt, Marketing or Admin costs included in rate) -- Steve Chiara (Agreed that pricing will be premium price solicited for the "green power" and a sample calculation will not be required)

5) Terms and Conditions of Filing to include the removal of delinquent customers -- Bob Werlin/Jack Habib
6) Prepare Press Release (or Press Conference) -- Mike Durand

Current due date is still 9/30/03.

Please let me know if there are any further questions/comments.
