SECTION E. OPERATIONS

21. Provide a summary of the RMD's operating procedures for the cultivation of marijuana for medical use.

We designed our cultivation procedures in order to comply with safety and the DPH standards. The floor plan was designed to eliminate problems before they can arise and and efficient flow of operation. We designed a fully equipped changing and sanitation room for cultivation employees to prevent contaminants from entering the cultivation areas. All employees must leave all personal items outside the cultivation area and wear protective clothing at all times while inside this area. We have divided the cultivation area into multiple grow rooms to prevent cross contamination. Each compartment is fitted with steel commercial grade tables to prevent the growth or mold, mildew, and rot. Each compartment is controlled to a precise temperature, humidity, and proper lighting by a central control system which is programmed to the plants needs. Our cultivation is consistent with the USDA Organic Requirements. We are going to use nutrients that are approved for the organic production of food. We are going to use a drip irrigation system to minimize the amount of water used as well as to prevent a large amount of runoff of wastewater. All water used for cultivation will be filtered through a Reverse Osmosis system so that solids and contaminants will be removed from the water prior to its use. There will be frequent visual inspection of each plant to ensure it is healthy and and pest free. Carbon dioxide will be used to increase the plants health and size and help them to be more pest and pathogen resistant. We will utilize high-capacity fans to maximize the flow of air. Plants are tracked through out their growth and information is entered into our tracking system which we are using through MJ Freeway.
