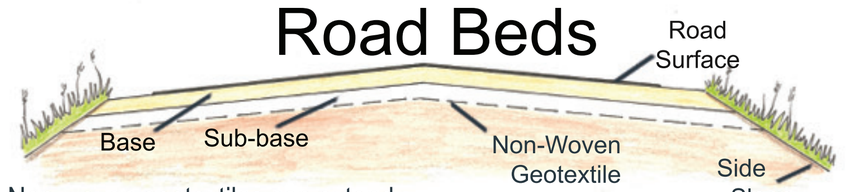
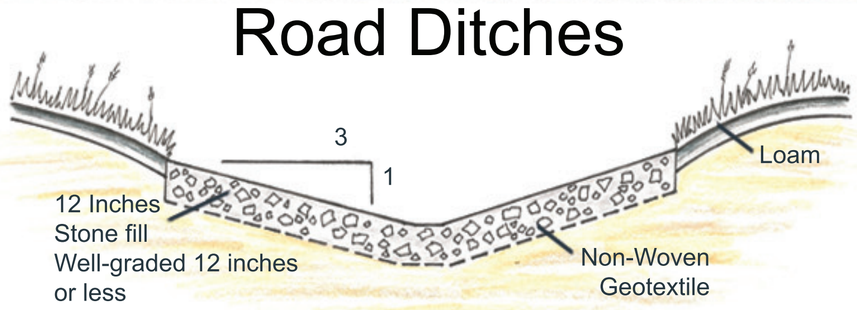
The NON-Slippery Slope of Gravel Road Stabilization

Road Beds



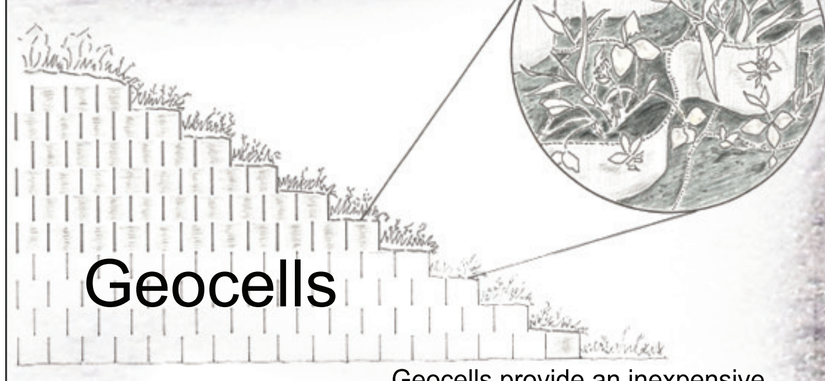
Non-woven geotextiles can extend the functional life of a road or ditch.

Road Ditches



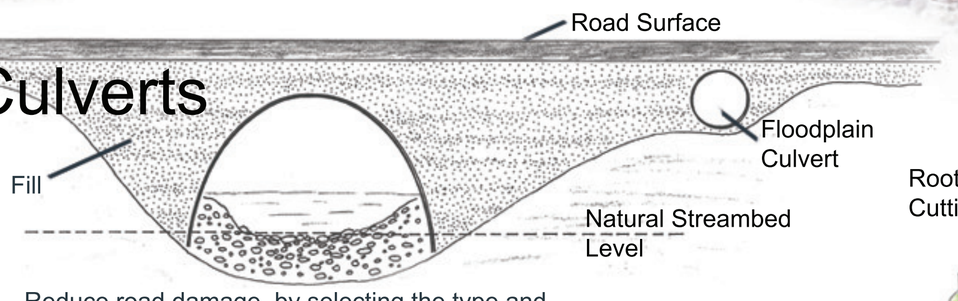
When choosing ditch protection, consider the slope and soils.

Geocells



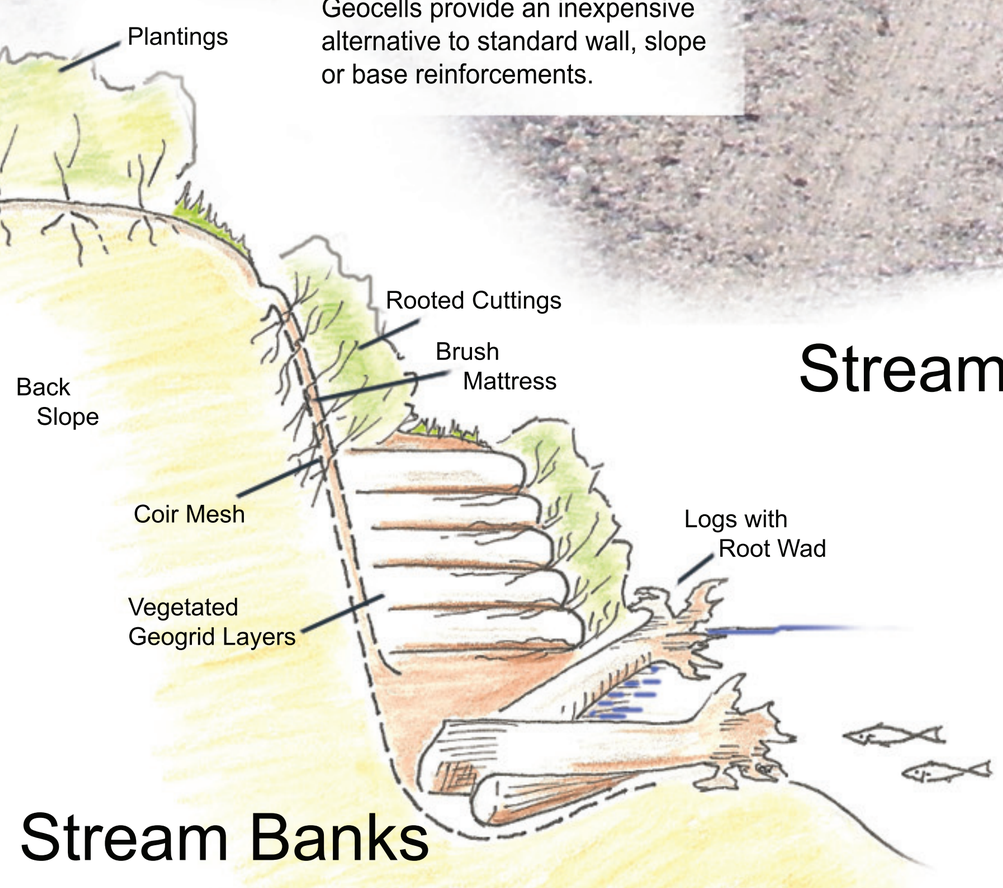
Geocells provide an inexpensive alternative to standard wall, slope or base reinforcements.

Stream Culverts



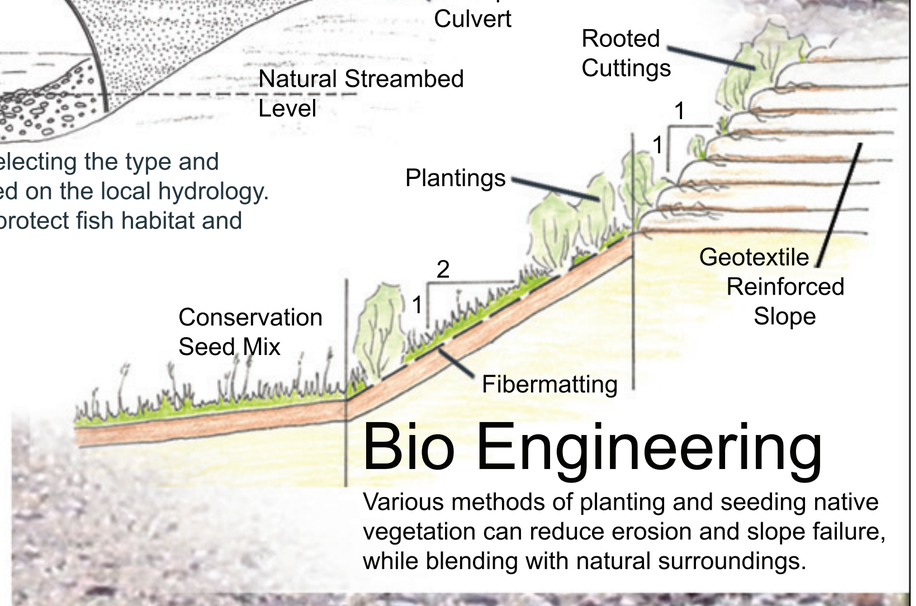
Reduce road damage by selecting the type and size of culvert to install based on the local hydrology. Properly designed culverts protect fish habitat and prevent stream erosion.

Stream Banks



Stabilize stream banks by using natural materials that improve wildlife habitat and which may lower construction costs.

Bio Engineering



Various methods of planting and seeding native vegetation can reduce erosion and slope failure, while blending with natural surroundings.
