

Massachusetts Department of Conservation and Recreation
Division of Water Supply Protection, Office of Watershed Management
Forest Management Project Summary

Project Title:

DWSP Harvest Permit Number: 5298
DCR Forest Cutting Plan File Number: 282-32500-22

Site Information

Watershed: Wachusett	Town(s): Sterling
Acres: 75	Nearest Road: Justice Hill Road
Natural Heritage Atlas overlap?: No	Public Drinking Water Supply Watershed?: Yes
Forest Types: white pine/oak, Mixed hardwoods	ACEC?: No
Soils: Paxton fine sandy loam, Woodbridge fine sandy loam	
Wetland Resources: Wetlands and an intermittent stream	
Vernal Pools: One potential vernal pool	

Harvest Information

DWSP Permit Start Date: 08/27/2021	DWSP Permit End Date: 08/27/2023
Number of Wetland Crossings: 0	Number of Stream Crossings: 0

Best Management Practices Applied

Stream Crossings	One
Filter Strips	One variable width filter strip
Wetland Crossings	Two
Harvesting in Wetlands	None

DWSP Forester supervising this harvest
Name: Greg Buzzell
Forester License #: 025
Phone #: 774-261-1841

NARRATIVES

General Description/Forest Composition/History:

This proposed lot is the remnants of two previously reviewed proposed lots...WA-10-141 and WA-17-248. WA-10-141 was marked and sold as Lot #5248 in 2014 and was operated from June to November of 2016. Work only occurred in the portion of the lot south of the stone wall that divides this area in half. No cutting occurred in the 22 acres north of the wall.

WA-17-248 was marked and sold as Lot 5264 in 2016 and was operated in May and June of 2017. Work primarily occurred in the north and north-central part of this area. Within the 51 acres in the south and southeast side of the lot, 3 of 9 overstory removal areas were completed. Since the remaining portions of these two lots directly abut each other, it seemed reasonable to combine them into one new operation.

Here's the description for WA-17-248:

This working unit is part of the large Davis Farm property that was acquired in 1996. This specific piece of the Davis Farm is known as the Stuart Pasture and as is typical for abandoned pastures as it is dominated by low quality white pine. A timber sale in the early 1990s seems to have removed the best quality pines and left the trees with multi-stemmed crowns. Along with white pine, the overstory is dominated by black birch, red oak, red maple and black cherry. Paper birch and bigtooth aspen are found as well and are especially prevalent in the western part of the area. The logging in the early 1990s has led to a well developed midstory of black birch, red maple, red oak and paper birch poles. There is good advance regeneration present as well and is comprised of red oak, red maple, white pine, white oak, hickory, black cherry and white ash. Sampling found adequate regeneration in 66% of the plots with marginal regeneration in 17% of the plots. Oak regeneration was present in 75% of the plots.

The description for WA-10-141 is similar as it has a similar history as a former pasture and was logged prior to MDC acquisition leading to good advance regeneration. In general, the quality of the white pine is better than in the other area and there is some very good quality red oak on the northeast facing slope.

Site Selection:

The ideal watershed protection forest is one which best serves the function of the land as a producer of high quality drinking water in both short- and long-term. This forest must be vigorous and diverse in tree species and ages, be actively accumulating biomass and actively regenerating. Such a forest will be ideally suited to be resilient to and quickly recover from small- and large-scale disturbances such as diseases, insect infestations, ice storms and hurricanes.

Silvicultural Objectives:

The plan for the remainder of Lot 5264 (WA-17-248) is to complete the harvesting of the overstory openings that remain. There are 9 openings ranging in size from 1/3rd to 1.5 acres that total 8.6 acres. Three openings totaling 4.7 acres were cut in 2017. Following this operation there will be 13.3 acres (8.6+4.7) of young forest in these 51 acres which is 26% of the area.

Lot 5248 was proposed for FY 2010 and the intent was to create overstory openings in the typical size range from about 1/5th to 2 acres in size in order to release advance regeneration resulting in a new young age cohort on up to 1/3rd of the area. When this lot was finally marked and sold in 2014 we were under silvicultural restrictions coming out of the moratorium that resulted in the STAC report and our response in the "From Here Forward" document. This temporary restriction limited all overstory openings to less than 1/2 acre. This restriction was lifted in time for the FY 2015 round of lot proposals. Given how faded

the marking paint is in this area is, the prudent course is to mark all-new openings in these 22 acres. As was the original intent for this area, the advance regeneration will be released by removing the overstory in patches that range from 0.5 to 2 acres in size totaling 7.6 acres resulting in young forest present on 33% of the area.

Cultural Resources:

This area has been assessed by the DCR Archeologist for both known sites of cultural or archeological importance as well as for potential use by pre-Contact Native Americans.

Wildlife/Rare or Endangered Species:

Moose sign is routinely found on this hill.

Landowner Signature

The most important information on a cutting plan is the Landowner's objective, as this will determine which trees will be harvested and which will remain; **this decision will also determine the future condition of the forest for decades to come.** After having read the Massachusetts Forest Cutting Plan Information Sheet on page one, indicate your objective by checking the appropriate box below.

**LT - Long-term Forest Management**

Planned management of the forest to achieve one or more of the following objectives: produce immediate and maximize long-term income, enhance wildlife habitat, improve recreational opportunities, protect soil and water quality, or produce forest specialty products.

**ST - Short-term Harvest**

Harvest of trees with the main intention of producing short-term income with minimal consideration given to improving the future forest condition, which often results in a forest dominated by poor quality and low value species.

I (we) have read the Massachusetts Cutting Plan Information Sheet, and am aware of my (our) management options.

I (we) hereby certify that I (we) have the legal authority to carry out the operation described above.

I (we) certify that I (we) have notified the Conservation Commission in the town in which the operation is to take place and the abutters of record within two hundred feet of the area to be harvested.

I (we) understand that the volumes and values (Ch61 only) in this plan have not been independently verified by the service forester upon approval and will report final values and volumes to the Director or his/her agent if the final figures differ from those reported.

Landowner: _____

Town: _____

File Number: _____

B M P s	<p><u>WC-1 is on the powerline access gravel road. Gravel or poles will be placed on this crossing.</u></p> <p><u>SC-1 (Rocky Brook)/WC-2 are on a powerline road that has preexisting gravel and is regularly wet and SC-1 will require bridging. The approaches to the stream will be protected with gravel and/or poles unless the ground is adequately frozen or snow-covered.</u></p> <p><u>WC-3 is an isolated unmapped wetland area at the base of a slope on a preexisting road and will be protected with wood (corduroy and/or tops) as needed if it is not dry or frozen.</u></p> <p><u>SC-2 does not originate from a wetland but will be treated as if it were. This SC-2/WC-4 crossing (on a preexisting road) will only be utilized if the is dry, frozen, or snow packed. Otherwise a haul road North of the stream will be used.</u></p>
Silviculture	<p><u>In order to release advance regeneration, 13 openings in the overstory are being created, covering 14 acres. These openings range from .42 acre to 2 acres in size with an average of 1.1 acres. They are well distributed throughout the area taking advantage of the advance regeneration comprised of white pine, oaks, and other hardwoods. No thinning will occur between any of these patches.</u></p>
Object	<p><u>The objective of this operation is to diversify the age structure of the forest by removing the overstory in patches thereby releasing the advance regeneration. The current age structure is limited with an insufficient component of young forest.</u></p>
Other	<p><u>The landing of this site will be right next to timber sale #282-22531-20. An alternate landing is located about 3700' to the west on Justice Hill Road. This site has been used as a landing several times previously.</u></p> <p><u>The powerline has several wet spots in the road that will be graveled, or tops may be place to fill them in. Some water bars may be installed on the powerline as needed.</u></p> <p><u>All haul roads between openings have been flagged along with the crossings. The haul road from the western landing has not been flagged. It follows the path that has been used for previous operations in this area and then follows skid trails through Lot 5264 (CP #282-8469-17) that was cut in 2017.</u></p> <p><u>FS-1 No cutting will take place.</u></p>
