

# MASSACHUSETTS MOSQUITO CONTROL ANNUAL OPERATIONS REPORT

2007 Year of Report

Date of Report:

Project/District Name: **Norfolk County Mosquito Control Project**

Address: 61 Endicott Street, Building #34

City/Town: Norwood

Zip: 02062

Phone: (781) 762-3681

Fax: (781) 769-6436

E-mail: ncmcp@attglobal.net

**Report prepared by: John J. Smith, David Lawson, Caroline Haviland, Nate Boonisar & Elizabeth Donnell**

If you have a mission statement, please include it here: Commission Mission Statement: "The Norfolk County Mosquito Control Project Commission represents the interests of the member communities and their residents by providing oversight of Project activities. The Commissioners each live or work within a community serviced by the Project, were nominated by municipal authorities, and were evaluated and appointed to their posts by the State Reclamation and Mosquito Control Board. The Commission strives to ensure that the member communities receive services consistent with applicable laws and justified by tenets of public health, vector control, environmental safety and fiscal responsibility. The Commission invites input and questions from community officials and residents. The Project's website announces the Commission's monthly meetings and planned agendas, and hosts minutes from past meetings."

## ORGANIZATION SETUP:

Please list your staffing levels for the year of this report:

Full time: 10

Part time:

Seasonal: 2

Other: (please describe)

Please break these down into the following areas:

Administrative staff: 5

Field staff: 5 (2 seasonal)

Please check off all that apply, and list employee name(s) next to each category:

Public relations John Smith, David Lawson, Caroline Haviland, Nate Boonisar, Elizabeth Donnell

- Information technology Nathaniel Boonisar GIS
- Entomologist pending
- Wetland Scientist Caroline Haviland-Environmental/Wetland Science concentration
- Biologist Caroline Haviland-Environmental/Wetland Science concentration, John Smith, Director
- Education Website
- Laboratory John J. Smith, seasonal employee
- Operations David Lawson, Caroline Haviland, Brian Moore, Robert O'Halloran, David Foley, William Haviland, John Tuana
- Facilities
- Other (please list)

For the year of this report, we maintained:

18 vehicles

2 modified wetland equipment (list type) Linkbelt, Kobelco SK60 excavators

5 ULV sprayers (list type) 2 lecos, 3 Promist with Smart Flow and Datamaster II systems  
Larval control equipment (list type) hand applications only

Other (please be specific):

**Comments:** \_\_\_\_\_

### **INTEGRATED PEST MANAGEMENT (IPM):**

#### **Definition TBD**

Please check off all of the services that you currently provide to your member cities and towns as part of your IPM program; details of these services are in the next sections.

- Larval mosquito control
- Adult mosquito control
- Source reduction
- Ditch maintenance
- Open Marsh Water Management
- Adult mosquito surveillance
- Education, Outreach & Public education
- Research
- Other (please list):

**Comments:** \_\_\_\_\_

### **LARVAL MOSQUITO CONTROL:**

Do you have a larval mosquito suppression program? Yes

If yes, please describe the purpose of this program: Targeted preemptive control measures are the most cost effective, efficient and environmentally friendly way to

reduce mosquito populations. NCMCP applies insecticides to shallow water to control mosquitoes in their most vulnerable aquatic stages in an attempt to prevent the emergence of adult mosquitoes. A data base of mosquito larval development sites are checked and treated as necessary by means of hand and/or aerial application.

#### Aerial Larval Control Program:

Spring and summer flooding following snow melt and/or heavy rainfall creates a potential each year for significant mosquito larval development in various wetlands across Norfolk County. The predominate species which develop in the spring are *Ochlerotatus abserratus*, *Ochlerotatus excrucians* and *Ochlerotatus canadensis*. In the summer the predominate species following river flooding are *Ochlerotatus trivittatus*, *Aedes cinereus*, *Aedes vexans*, *Psorophora ferox*, *Ochlerotatus cantator* (saltmarsh), *Ochlerotatus sollicitans* (saltmarsh) and *Ochlerotatus canadensis*. All of these mosquito species are strong human biters and can create significant nuisance level populations during the late spring and summer months. During certain years some of the summer mosquito species, such as *Aedes vexans* and *Ochlerotatus canadensis*, may be involved in the transmission of Eastern Equine Encephalitis (EEE) from birds to humans. In an effort to proactively control these aggressive human biting species and in an environmentally responsible manner, the Norfolk County Mosquito Control Project conducts aerial larval control operation using a product called *Bacillus thuringiensis israelensis* (Bti). In small wetlands and in larval development sites proximate to homes aircraft are not suitable. In these areas hand applications using the same product at the same rates are utilized.

#### Rain Basin/Detention Basin Treatments:

NCMCP applies insecticides to catch (rain) basins, storm water structures, etc. to control primarily *Culex* mosquitoes in their aquatic stage. Catch basin treatments were added back into the larval control efforts of NCMCP with the identification of the West Nile virus (WNV) in the state during the summer of 2000. *Culex* species have been identified as likely vectors of WNV.

Please give the time frame for this program: mid-April through early September (Rain Basins early June through mid-August).

Describe the areas that this program is used: The typical wetlands treated during the spring are described as (Aerial applications greater than five acres) Palustrine - Forested - Broadleaf and Palustrine - Scrub/Shrub - Broadleaf wetlands as delineated on the National Wetland Inventory Maps. Summer applications are more typically conducted over river floodplain areas especially within wetlands adjacent to the Neponset and Charles Rivers. Maps of aerially targetted wetlands are available on the Projects website. Saltmarshes are treated during late spring and summer.

Rain Basin treatments typically occur in high basin areas around centers of towns and heavy residential/commercial areas.

Do you use:

**Ground applied (includes hand, portable and/or backpack)**

**Helicopter applications**

**Other (please list):**

**Comments:** \_\_\_\_\_

What products do you use in – (please use product name and EPA#)

**Wetlands:** Bti (*Bacillus thuringiensis israelensis*) granular (Vectobac G) EPA Reg. # 730 49-10

**Catch basins:** Methoprene (Altosid) EPA Reg No. 2724-421,  
VectoLex WSP EPA# 73049-20

**Containers:** Methoprene (Altosid) EPA Reg No. 2724-421,  
VectoLex WSP EPA# 73049-20

**Other (please list):**

Please list the rates of application for the areas listed above:

**Wetlands:** Vectobac G Spring 5 pounds/acre, Summer 7.5 pounds/acre

**Catch basins:** One Methoprene (altosid) - briquett/ rain basin, stormwater detention basins - one briquett/ 100 sq. ft

One VectoLex WSP pouch/rain basin, stormwater detention basins - one pouch/100 sq. ft

**Containers:** One Methoprene (altosid) briquett/ 100 sq. ft.

**Other:**

**Comments:** \_\_\_\_\_

---

### **ADULT MOSQUITO CONTROL:**

Do you have an adult mosquito suppression program? Yes

If yes, please describe the purpose of this program: When larviciding is not a viable option (example: *Coquillettidia perturbans*) and/or when adult mosquito populations reach levels which are either bothersome to residents and/or a public health concern is realized, targeted adulticiding applications are used. NCMCP makes decisions to use adulticides based on evaluations of the risks of EEE or WNV transmission to humans in collaboration with the Massachusetts Department of Public Health (MDPH) or based on evaluations of the nuisance level that residents report to NCMCP. NCMCP also bases

decisions to adulticide on mosquito surveillance and after careful analysis of predicted local weather conditions.

Please give the time frame for this program: Late May through mid-Septemeber depending on weather conditions.

Describe the areas that this program is used: These applications typically take place in residential areas. Maps of the areas to be treated are loaded on the Projects website by 3:30 P.M. the day before the scheduled application.

Do you use:

- Truck applications**
- Portable applications**
- Aerial applications**
- Other (please list):**

**Comments:** \_\_\_\_\_

Please list the names of the products used with EPA #:

- 1). Anvil 10+10 ULV (Sumithrin) EPA Reg. #1021-1688-8329
- 2).
- 3).
- 4).

Please list your application rates for each product:

- 1). 0.62 fluid ounces/acre
- 2).
- 3).
- 4).

Please describe the maximum amounts or frequency used in a particular time frame such as season and areas  
maximum frequency once per week (many times residential areas @ once per month or less)

**Comments:** \_\_\_\_\_

---

## **SOURCE REDUCTION**

Do you perform source reduction methods such as tire/container removal? Yes

If yes, please describe your program: The NCMCP advises residents in person or via phone or internet to empty any containers that may hold water on their property. When performing site visits, personnel will overturn containers or tires that hold water and may contain mosquito larvae.

**Comments:** The NCMCP also considers our Ditch Maintenance, FWWM and OMWM programs valuable methods of source reduction.

---

## **DITCH MAINTENANCE**

Do you have a ditch maintenance program? Yes

Please check all that apply:

- Inland/freshwater
- Saltmarsh

If yes, please describe: The NCMCP Ditch Maintenance (DM) program consists of clearing existing drainage ditches of silt, vegetation and debris in order to restore proper water flow, eliminate standing water, thus reducing mosquito larval development. The NCMCP has recently created a Fresh Water Water Management program (FWWM) This Program is fashioned after the OMWM program structure. Proposed projects that may not fit within standard ditch maintenance guidelines may be carried out under the strict review of the established FWWM Advisory Board. The NCMCP is interested in working with the regulatory community, within the legal thresholds, in order to implement source reduction practices that specifically improve our wetland resources or habitats for fish and wildlife. We seek to use approved strategies for performing this work. Accepted stream restoration techniques, removal of fish barriers, known and proven methods of invasive species control will be incorporated into this program to serve a dual purpose.

DM and FWWM work can reduce the amount of insecticide the Project has to use in order to reduce the nuisance/vector population of mosquitoes in the surrounding area. We refer to this type of work as source reduction work and consider such work to be an important part of an Integrated Pest Management (IPM) strategy. Data collection and surveillance measures are important elements of any mosquito IPM strategy. Data collected during insecticide applications is used to aid in the determination of future Water Management Project sites (DM or FWWM).

Please check off all that apply INLAND DITCH MAINTENANCE:

- Hand tools**
- Mechanized equipment**
- Other (please list):**

**Comments:** \_\_\_\_\_

Please check off all that apply SALTMARSH DITCH MAINTENANCE:

- Hand cleaning**
- Mechanized cleaning**
- Other (please list):**

**Comments:** \_\_\_\_\_

Please give an estimate of cumulative length of ditches maintained from the list above  
INLAND:

**Hand cleaning 203,534 feet checked of which 74,936 feet was cleaned**

**Mechanized cleaning 2,935 feet**

**Other (please list):**

**Comments:** \_\_\_\_\_

Please give an estimate of cumulative length of ditches maintained from the list above  
SALTMARSH:

**Hand cleaning 660 feet**

**Mechanized cleaning 1,705 feet**

**Other (please list):**

**Comments:** The Freshwater Water Management Program is listed under Ditch Maintenance

---

## **OPEN MARSH WATER MANAGEMENT**

Do you have an OMWM program? Yes

If yes, please describe: Open Marsh Water Management (OMWM) is a technique which provides a greater access to the salt marsh for small fish which eat mosquito larvae developing on the marsh. This greatly reduces the need for mosquito adulticiding in the immediate neighborhood. The work also reverses some of the changes that were done to the marsh when it was originally ditched. OMWM also prevents the encroachment of invasive plants and provides better habitat for waterfowl and other birds. OMWM was conducted on one saltmarsh - The Meadows Marsh - in Quincy this year.

Please give an estimate of total square feet or acreage: .

**Comments:** 8 acres

---

## **ADULT MOSQUITO SURVEILLANCE**

Do you have an adult mosquito surveillance program? Yes

Please check off all that apply:

- Gravid traps
- Resting boxes

- CDC light traps
- CDC light traps w/CO<sub>2</sub>
- ABC light traps
- ABC light traps w/CO<sub>2</sub>
- NJ light traps
- NJ light traps w/CO<sub>2</sub>

- Canopy
- Canopy
- Canopy
- Canopy
- Canopy
- Canopy

Other (please describe):

Please describe the purpose of this program:

CDC Light Traps: CDC Light Traps with CO<sub>2</sub> are used to determine the presence of adult mosquitoes, species and their density. CDC Light Traps with CO<sub>2</sub> are also used to monitor for EEE and West Nile Virus. Collections of mosquitoes (pools) are submitted weekly to the Massachusetts Arbovirus Surveillance Laboratory (MDPH) for the purpose of monitoring the presence of West Nile Virus and EEE in local mosquito populations.

Gravid Traps: These traps are used by NCMCP to collect primarily *Culex pipiens* and *restuans* mosquitoes for submission to the Massachusetts Arbovirus Surveillance Laboratory (MDPH) for WNV analysis. Gravid mosquitoes which are attracted to these traps are important to sample because they may have recently fed on a bird. The bird biting species are usually the first to pick up the virus since they feed primarily on birds where West Nile virus originates.

Do you maintain long-term trap sites in any of your areas? Yes  
If yes, please describe how you chose these long-term sites.

CDC Light Traps: CDC Light traps with CO<sub>2</sub> are placed for maximum collection of species of interest both for monitoring of human biting populations as well as for collection of species important in the transmission of EEE and WNV.

Gravid Traps: Gravid Traps are placed at locations for maximum collection of *Culex pipiens* and *restuans*. Traps are located in all 25 communities usually in the highest urbanized areas for maximum collections.

Please check off the species of concern in your service area:

- Oc. taeniorhynchus*
- Oc. triseriatus*

- Oc. trivittatus*
- Ps. ferox*
- Ur. sapphirina*

Other (please list):

Do you participate in the MDPH Arboviral Surveillance program? Yes

How many pools do you submit weekly on average? 60

Please check off the arboviruses found in your area in the past 5 years:

- West Nile Virus
- Eastern Equine Encephalitis
- Other Please list:

Did the above listed diseases cause human or horse illnesses? Yes

Please explain:

2005: Horse Case - Wrentham 8/24/2005 EEEV

2004: Horse Case - Walpole 8/25/2004 EEEV  
Human Cases - under 18, 8/23/2004 EEEV  
- under 18, 10/24/2004 EEEV

2003: Horse Case - Medway 10/11/2003 WNV  
Human Case - Weymouth age 25-44, 9/3/2003 WNV

2002: Human Cases - Weymouth age 65-84, 9/3/02 WNV  
- Weymouth age 65-84 10/5/02 WNV

Data from MDPH website.

At what arbovirus risk level did the year begin in your area? (If more than one please list)

**WNV: Moderate risk level for all of the county except for Dover, Walpole, Medfield, Millis, Medway, Franklin, Wrentham and Plainville which were classified as low risk. The Town of Bellingham risk level was classified as remote.**

**EEE: Moderate risk for Plainville, Wrentham, Norfolk, Walpole, Foxborough, Sharon, Stoughton, Canton, Avon, Randolph, Holbrook and Weymouth. The remainder of the towns were classified as remote risk.**

**Data from MDPH Arbovirus Surveillance Reports.**

---

At what arbovirus risk level did the year end in your area? (If more than one please list)

**WNV: All of the towns were classified as moderate risk except for Foxborough which was classified as high risk. Bellingham was classified as a remote risk.  
EEE: Same risk levels as noted at the beginning of the season (see above).**

**Data from MDPH Arbovirus Surveillance Reports.**

**Comments:** \_\_\_\_\_

---

## **EDUCATION, OUTREACH & PUBLIC RELATIONS**

Do you have an education/public outreach program program? Yes

If yes, please describe: NCMCP maintains a very informative website which is updated daily during the season. Maps depicting areas to receive larval/adult treatments are available to all residents of the county. Information on all the mosquito control products NCMCP uses are available on the website as well as links to regulatory agencies such as the Federal Environmental Protection Agency and the State Pesticide Bureau. The website also contains links to the Massachusetts Department of Public Health and the Centers for Disease Prevention and Control where residents can find up to date information on arbovirus activity in the county, the state as well as country wide. There is information available on how a resident may go about excluding their property from the Program as well as links which help guide daycare managers and school administrators through the some what complex compliance requirements of the Childrens and Family Protection Act. The website also provides rapid access to the Projects administrative personnel through the email link at the bottom of the websites main page. This website has proven invaluable in the area of public notification and education.

Please check off all that apply:

- School based program
- Website
- PR brochures/handouts
- Community events
- Other (please describe):

Please give an estimate of attendance/participants in this program: Community event fund raiser @ 600 attendees.

Please list some events you participated in for the year of this report: see above.

Please list training events your staff attended: \_\_\_\_\_

Northeastern Mosquito Control Association Annual Meeting, Plymouth, MA, December 2007.

American Mosquito Control Association Annual Meeting, Orlando, FL, April 2007.

Arboviral Disease Control Conference March 1, 2007 in Shrewsbury MA.

**Comments:** \_\_\_\_\_

---

### **BIOLOGICAL CONTROL EFFORTS**

Do you have a biological control program? Yes

If yes, please describe: OMWM...see comments in section above.

Is this program the introduction of mosquito predators or the enhancement of habitat for native predators? Enhancement of habitat for native predators

Please check off all that apply:

- Predatory fish
- Predatory invertebrates
- Other (please describe):

**Comments:** \_\_\_\_\_

### **INFORMATION TECHNOLOGY**

Does your program use (check all that apply):

- Computers
- GIS mapping
- GPS equipment
- Computer databases
- Aerial Photography
- Other (please describe):

Please describe your capabilities in these areas:

NCMCP uses GIS in various aspects of our work.

Spring aerial larvicide: GIS is a valuable tool in this aspect of our program. Using the Mass. DEP wetland layers, NCMCP identifies potential larval development areas that NCMCP personnel also dip (larval survey) on a yearly basis. The dip data is added to each wetland and NCMCP now has stored up to 5 years of mosquito larval development data on these wetlands. The wetland files can be directly converted and loaded onto aircraft, and treatment information (flight paths) from the aircraft can be

converted back into GIS shapefile format and stored. Coupled with this, NCMCP uses the wetland layers to determine ground larvicide sites and store larval development data for these as well.

ULV Applications: NCMCP regularly geocode (plots) request calls based on address and NCMCP plans ULV treatments around these calls. Paper maps are given to the field crew to aid in their work. As of 2007, NCMCP acquired GPS tracking devices for the ULV spray trucks. The GPS data can be converted into GIS format and stored on our system to monitor areas that were treated, to determine exclusion zone protection as well as time of treatment, and treatment rate. NCMCP is currently working on a project to plot request calls back 10 years. This will help NCMCP locate consistent problem areas and provide guidance as to what areas need more attention on a yearly basis.

Water Management: Using the layers provided by MassGIS, NCMCP can locate wetlands, streams, environmentally sensitive habitats, water supply areas, etc. and plan field work around these sites. Additionally, remote sensing using the aerial photographs (both real color and infrared) provides useful information on the areas. Some NCMCP Communities also have their own GIS layers including pipes, culverts, ditches, and 2-foot contour lines which provide an extremely detailed depiction of an area.

Please describe your current GIS abilities: Advanced

Give details if possible on your GIS abilities: We use ArcMap 8.3. NCMCP's Surveillance Tech continues to learn new capabilities of this software. His abilities include general map-making, geocoding, buffering, calculating acreages and lengths, analization using different colors/sizes of features based on associated data, and the ability to create professional looking maps. ArcMap has a wide variety of uses, and as NCMCP attempt new analization techinques, the Surveillance Tech learns more of the abilities of ArcMap.

**Comments:** \*The Surveillance Tech's GIS abilities are advanced relative to the general mosquito industry.

---

## REVENUES & EXPENDITURES

Please give a concise statement of revenues & expenditures for the prior fiscal year ending June 30.

Budget request for F/Y2007 \$1,269,385, Expenses \$1,204,185 (Rollover @ \$59,000)

Expenditures by Object Code:

AA-State Employee Compensation	508,571.75
B05-Conference Tranining	2,099.99
B08-Clothing Allowance	40.00
B10-Exigent Job-Related	4,155.45

D09-Fringe Benefits Reimbursement	119,399.09
D12 D14 D19 Insurance	6896.24
D20-Pension & Insurance	75,691.00
E01-Office & Administration	2,183.47
E06-Postage	184.40
E13-Advertising Expense	315.90
E15-Bottle Water	116.04
E22-Conference Incidentals Registration	1,400.00
F05-Laboratory Supplies	1,622.49
F09-Clothing & Footwear	157.20
F11-Laundry & Cleaning Supplies	340.33
F24-MV Maintenance & Repair Parts	4,084.28
G01-Space Rental	70,779.60
G03-Electricity	6,646.55
G05-Fuel for Vehicles	18,398.14
J62-Contrct Advrsy Board	7,614.57
L26-Rental Copier	1,111.56
L46-Service Agreement	6.43
L51-Heavy Equip Maint & Repair	13,064.96
L63-Program Equip Maint & Repair	622.00
N52-Facility Infrast Mnt Repair Tools	387.32
N60-Lawn & Garden Maintenance & Repair	1,995.32
N64-Garden Expense Tools & Supplies	235,386.20
N71-Exterminators Integrated Pest Mgmt	103,628.80
N72-Hazaradous Waste Removal Svcs	379.54
N73-Non Hazaradous Waste Removal Svcs	1,625.71
U02-Telecommunications Services	10,357.11
U03-Software & IT Licenses	368.12
U05-IT Consult. Independent Contractors	875.00
U07-IT Equipment Purchase	3,680.71

TOTAL EXPENSES 1,204,185.27

Revenues: None, assesments off cherry sheets...see DOR website for details

Comments: \_\_\_\_\_

## **LARGE AREA EXCLUSIONS**

Do you have large areas of pesticide exclusion, such as estimated or priority habitats?  
Yes

If yes, please explain, and include maps if possible. Our largest exclusion zone is the Massachusetts Audubon Society's Moose Hill Wildlife Sanctuary in Sharon. NCMCP does not adulticide or larvicide this area. Moose Hill accounts for approximately 11% of the Town of Sharon's wetland area.

Elsewhere, 14 out of our 25 towns had resident exclusion zones in 2007. Sharon contained the largest number with 16 exclusions, followed by Milton with 12 exclusions. The remaining 12 towns had fewer than 5 resident exclusions. All resident exclusion zones are located via parcel maps or geocoding, and a 300-foot buffer zone is placed around them. These areas are shown on the field crew ULV maps, along with the written address of the exclusion.

---

## **SPECIAL PROJECTS**

Do you perform any inspectional services such as inspections at sewage treatment facilities or review sub division plans? Yes

If yes, please elaborate NCMCP personnel frequently inspect and treat constructed wetlands (retention, detention ponds, remediation site, etc.). More frequently NCMCP has been contacted by town boards for input on subdivision plans. There is no legal mechanism to prevent the creation of mosquito larval development sites when developing a site. The NCMCP hopes future updates to the DEP Stormwater Manual will tackle such important issues.

Do you work with DPW departments or other local or state officials to address stormwater systems, clogged culverts or other areas that you have identified as man-made mosquito problem areas? Yes

If yes, please elaborate: NCMCP is in direct communication with local DPW departments with regard to clogged culverts and stormwater systems. NCMCP coordinates with many local DPWs annually to clean catch basins and drainage pipes of sand and debris that may eventually discharge into adjacent wetlands. Some town departments have assisted NCMCP by bearing the burden of disposing of sands and sediments NCMCP removes from drainage ditches and/or streams. NCMCP has communicated with several Conservation Agents and Planning Board members in recent years relative to review, advise and discussion of stormwater issues. This relationship continues to expand.

Have you worked with these departments on long term solutions? Yes

---

## **CHILDREN AND FAMILIES PROTECTION ACT**

Is your program impacted by the Children and Families Protection Act? Yes

If yes, please explain: Throughout the Projects service area, NCMCP has approximately 225 schools and 252 day cares that must comply with this law. Each school/day care has been located either through parcel maps, when available, or through geocoding, combined with aerial photography or Pictometry. A 300-foot buffer zone has been created around the school/day care property as well as any adjacent athletic fields. On the ULV maps the field crews navigate by, the streets within the buffer zone are shown in red (as an exclusion) along with a symbol indicating the location of the school/day care. The GIS layers are set in such a manner that a school or day care exclusion can be easily removed or replaced depending on compliance. The school and day care data are checked on a yearly basis for changes in status, and buffer zones updated accordingly. The exclusion zones are clearly marked on the ULV route maps that are post on the Projects website in an effort to keep the public informed of the exclusionary status of these areas.

If you have data on compliance with this Act and your program, please list here: NCMCP has a GIS layer showing points as locations of schools/day cares, and has a separate GIS layer depicting red lines as the exclusion zones around such properties.

If you had difficulties with implementation of your program due to this law, please elaborate here: NCMCP generally does not have widespread problems complying with this law, however there are, from time to time, issues which arise. In high density communities such as Quincy and Weymouth, the most common complaint received is from residents adjacent to schools, who question why they are in an exclusion zone. After explaining the law, the residents often express their frustration as to why their area

can not be treated with the early morning ULV applications especially when the school is vacant at these hours. NCMCP is concerned that many residents consider treating their own properties. NCMCP is concerned that this may cause an increase in non-professional applications of pesticides on properties within these exclusion zones. The situation is further exacerbated when mosquito borne viruses are identified in the area. Non-compliant schools, and some times parents, will call NCMCP to have the school property treated. Very often after explaining the law, the school (and the concerned parents) express frustration as to the burdensome process that must be completed in order to bring the school/day care into compliance. NCMCP has had some instances where a public school is in compliance with the law, but an adjacent private school or day care was not, and the overlapping buffer zone prevented NCMCP from treating the public school. Again, this creates frustration for school officials, parents, and mosquito control projects.

## **GENERAL COMMENTS**

Please list any comments or concerns not covered in this report:

Seasonal Timeline:

March through May:

- Water management activities March through early April
- Ground & Aerial larval control applications early April through May
- Ground ULV control applications late May
- Surveillance activities larval surveys March through May, adult surveys May
- Equipment maintenance on going as needed during period
- Off loading of pesticide products on going during period
- Data management and analysis, map preparation on going during period

June through September:

- Ground & Aerial larval control applications including rain basin treatments during period as needed
- Ground ULV control applications during entire period as needed
- Surveillance activities larval surveys & adult surveys during entire period including weekly submission of mosquito pools to MDPH
- Equipment maintenance on going as needed during period
- Data management and analysis, map preparation on going during period

October through early December:

- Surveillance activities adult surveys continue until mid to late October including weekly submission of mosquito pools to MDPH
- Water management activities resume during this period (most active period for this activity).
- Data management and analysis continue
- Equipment maintenance on going as needed during period

December through February:

- Employees encouraged to take vacation time during this period.
- Maintenance of facility and equipment (mainly during extreme weather events):

Equipment:

- winterize/de-winterize ULV sprayers
- fleet maintenance/repairs
- heavy equipment (excavators) maintenance/overhauls
- general equipment welding, repairs
- repairs and servicing of various surveillance equipment (CDC Light traps/Gravid traps/regulators, etc)

Facility:

- facility organization (vehicle storage areas, insecticide storage areas)
- cleaning and painting
- hazardous waste removal preparation activities (coordination with vendor)
- insecticide management (receiving of large inventory deliveries)
- training (including Operations training, Right-to-Know Law, etc)
- preparations for internal inspections
- snow removal when necessary

Office:

- review of complain call/fieldwork accomplished data bases for accuracy necessary for data analysis
- preparation of GIS data/overlays for next season aerial/ground larval control applications including meeting with contracted helicopter company/pilots
- securing permission for aerial landing zone sites, review of aerial vendor insurance documents, etc.
- review of and analysis of previous season surveillance data as feedback for next season larval/adult control efforts
- revision of endangered species habitat GIS layers as well as other exempt locations such as schools, daycares relative to the Children and Family Protection Act (these overlays are incorporated into the ULV units GPS navigation systems)
- staff training including attendance of regional and national mosquito control conferences as well as preseason strategy sessions with SRMCB & MDPH
- schedule time during off season with computer software/hardware vendors for off season maintenance of computer systems/software/network

The scheduling of these activities, although necessary each year, is usually reserved for extreme weather events such as heavy snow events and/or periods of extreme temperatures. The majority of the off season work is in support of the water management program. This involves the monitoring of/hand clearing of/brushing of and/or mechanized excavation of mosquito ditches. Even during extreme freezes work can normally continue in coastal salt marsh locations due to the lack of frozen conditions found year round in these areas.
