**Division of Water Supply Protection, Office of Watershed Management**  
***Forest Management Project Summary***

**Project Title:**

<b>DWSP Harvest Permit Number:</b> 2046
<b>DCR Forest Cutting Plan File Number:</b> 024-7151-15

**Site Information**

<b>Watershed:</b> Quabbin	<b>Town(s):</b> Belchertown
<b>Acres:</b> 44	<b>Nearest Road:</b> Earley St.
<b>Natural Heritage Atlas overlap?:</b> No	<b>Public Drinking Water Supply Watershed?:</b> Yes
<b>Forest Types:</b> oak/hardwood, oak/white pine	<b>ACEC?:</b> No
<b>Soils:</b> Scituate fine sandy loams	
<b>Wetland Resources:</b> Lot abuts a wetland and small stream to the northwest and small stream to the north which drains east into the Quabbin Reservoir.	
<b>Vernal Pools:</b> None on lot.	

**Harvest Information**

<b>Harvest Start Date:</b> 7/27/2016	<b>Harvest End Date:</b>
<b>Number of Wetland Crossings:</b> None	<b>Number of Stream Crossings:</b> None

**Best Management Practices Applied**

<b>Stream Crossings:</b> There are no stream crossings.
<b>Filter Strips:</b> Variable width filter strip used.
<b>Wetland Crossings:</b> There are no wetland crossings.
<b>Harvesting in Wetlands:</b> There is no harvesting in wetlands.

<b>DWSP Forester supervising this harvest</b>
<b>Name:</b> Steven Wood
<b>Forester License #:</b> 257
<b>Phone #:</b> 413-323-6921 ext. 156
<b>Email:</b> Steven.Wood@state.ma.us

## **NARRATIVES**

### **General Description/Forest Composition/History:**

The area to be harvested is in the town of Belchertown on the east side of Earley St., just inside of Gate 4.

The stone walls on this lot attest to its history of clearing for agriculture, most likely for pasture. When the farmland was abandoned, probably in the late 19<sup>th</sup> or early 20<sup>th</sup> century, it reverted to forest.

The primary tree species present are mixed oaks (predominately red oak) and white pine. Other hardwoods include black and paper birch, red and sugar maple, beech, chestnut, chestnut oak, sassafras, hickory and several large spruce. Hemlock occurs in small groups, mainly as suppressed mid-story trees.

The soils on this lot are primarily Scituate fine sandy loams. These are moderately well drained soils with a hard pan 2'-4' below the surface, but normally with no frequent flooding or ponding.

### **Site Selection:**

The primary goal of the watershed forest management program is to create and maintain a forest that provides high quality drinking water to current users and future generations. In order to achieve this, DWSP has determined that the forest should contain a diversity of species in various stages of development (seedlings through large legacy trees). In addition, the forest should be vigorous; actively growing and regenerating. A forest in this condition is resilient to and can quickly recover from small and large scale disturbances such as diseases, insect infestations, ice storms and hurricanes.

### **Silvicultural Objectives:**

The goal of this harvest is to establish new tree seedlings and providing space for existing regeneration to expand and grow. The diversity of native species present is being maintained. This combination of structural and species diversity builds resistance and resilience into the forest.

The main treatment at this time is the removal of the overstory in small groups, up to ½ acre in size, in order to foster regeneration (new age class). Some groups were placed where there were clusters of trees that were declining or had weak stem form, often due to insect, disease, or storm damage. These vulnerable trees will be replaced with vigorous new seedlings, or with saplings where there is existing regeneration to be released.

Wherever possible wildlife habitat features, such as snags (dead trees) and trees with cavities or nests were retained and protected.

### **Cultural Resources:**

Stone walls are present on the southeast corner of the lot and don't need to be crossed but will be protected during felling operations. This is also where a permanent landing is located. Adjacent to

this are some foundations and wells which have been protected. Otherwise, this area has been determined not to be culturally or archeologically sensitive based on a review by the DCR Archaeologist.

**Wildlife/Rare or Endangered Species:**

The lot contains no critical habitats or known rare or endangered species, and no vernal pools. The area is home to a variety of wildlife including deer, turkey, coyote and moose. Great horned owls have been seen and heard in the northern section. Spruce cone middens indicate red squirrel activity.

Landowner

**Landowner Signature**

The most important information on a cutting plan is the Landowner's objective, as this will determine which trees will be harvested and which will remain; this decision will also determine the future condition of the forest for decades to come. After having read the Massachusetts Forest Cutting Plan Information Sheet on page one, indicate your objective by checking the appropriate box below.

**LT - Long-term Forest Management**

Planned management of the forest to achieve one or more of the following objectives: produce immediate and maximize long-term income, enhance wildlife habitat, improve recreational opportunities, protect soil and water quality, or produce forest specialty products.

**ST - Short-term Harvest**

Harvest of trees with the main intention of producing short-term income with minimal consideration given to improving the future forest condition, which often results in a forest dominated by poor quality and low value species.

I (we) have read the Massachusetts Cutting Plan Information Sheet, and am aware of my (our) management options.  
 I (we) hereby certify that I (we) have the legal authority to carry out the operation described above.  
 I (we) certify that I (we) have notified the Conservation Commission in the town in which the operation is to take place and the abutters of record within two hundred feet of the area to be harvested.  
 I (we) understand that the volumes and values (Ch61 only) in this plan have not been independently verified by the service forester upon approval and will report final values and volumes to the Director or his/her agent if the final figures differ from those reported.

Narrative Page (Effective Date: 1/1/04)

Use this page to provide further explanation or if Other (OT) was used in any category on pages 3 or 4.

Landowner DCR/DWSP

Town Belchertown

File Number 024-7151-15

BMPs

Use this Section to provide further explanation or if Other (OT) was used in any category in the Best Management Practices Section on Page 3.

Small wooded wetland west of the road is source to the intermittent stream flowing along the north end of the lot.

FS-1 is along this stream, variable width no trees are marked with in 50ft of this stream

Designation of Trees

Use this Section to describe the types of trees to be harvested and/or retained if Other (OT) was used for "Designation of Trees" in the Stand Treatment Section on page 4.

Stand No.	Species to be Cut	Size of Trees to be Cut	Quality of Trees to be Cut	% BA/Acre Removed

Regeneration & Future Condition

Use this Section to describe how Chapter 132 requirements will be met if a non standard system (HG, DL, or OT) was used for the "Type of Cut" in the Cutting Standards Section on page 4.

Stand No.	Source of Regeneration (ex. AD, SE)	How will Regeneration be obtained/protected? If using AD - Describe the species present and how the regeneration will be protected If using SE - Describe the source of the seed and the number of seed trees/acre

Stand No. **Desired Future Condition**  
Describe what the stand is expected to look like five years from the harvest, including the condition of the overstory & understory

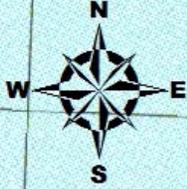

ST-1	Harvest is basically shelterwood, thinning hardwood establishment will depend on seedling establishment future entry will be to release advanced regeneration once established, Still Red Oak dominated stand
ST-2	Mixed species watershed protection forest, released/thinned pine should do well Reentry plans same as ST-1
ST-3	Stand may be managed for Sugar Maple tap lot along with other trees around the old home site here, depending on DCR policy

Notes to Service Forester DCR/DWSP lot 2046, inside gate 4, Early street Belchertown

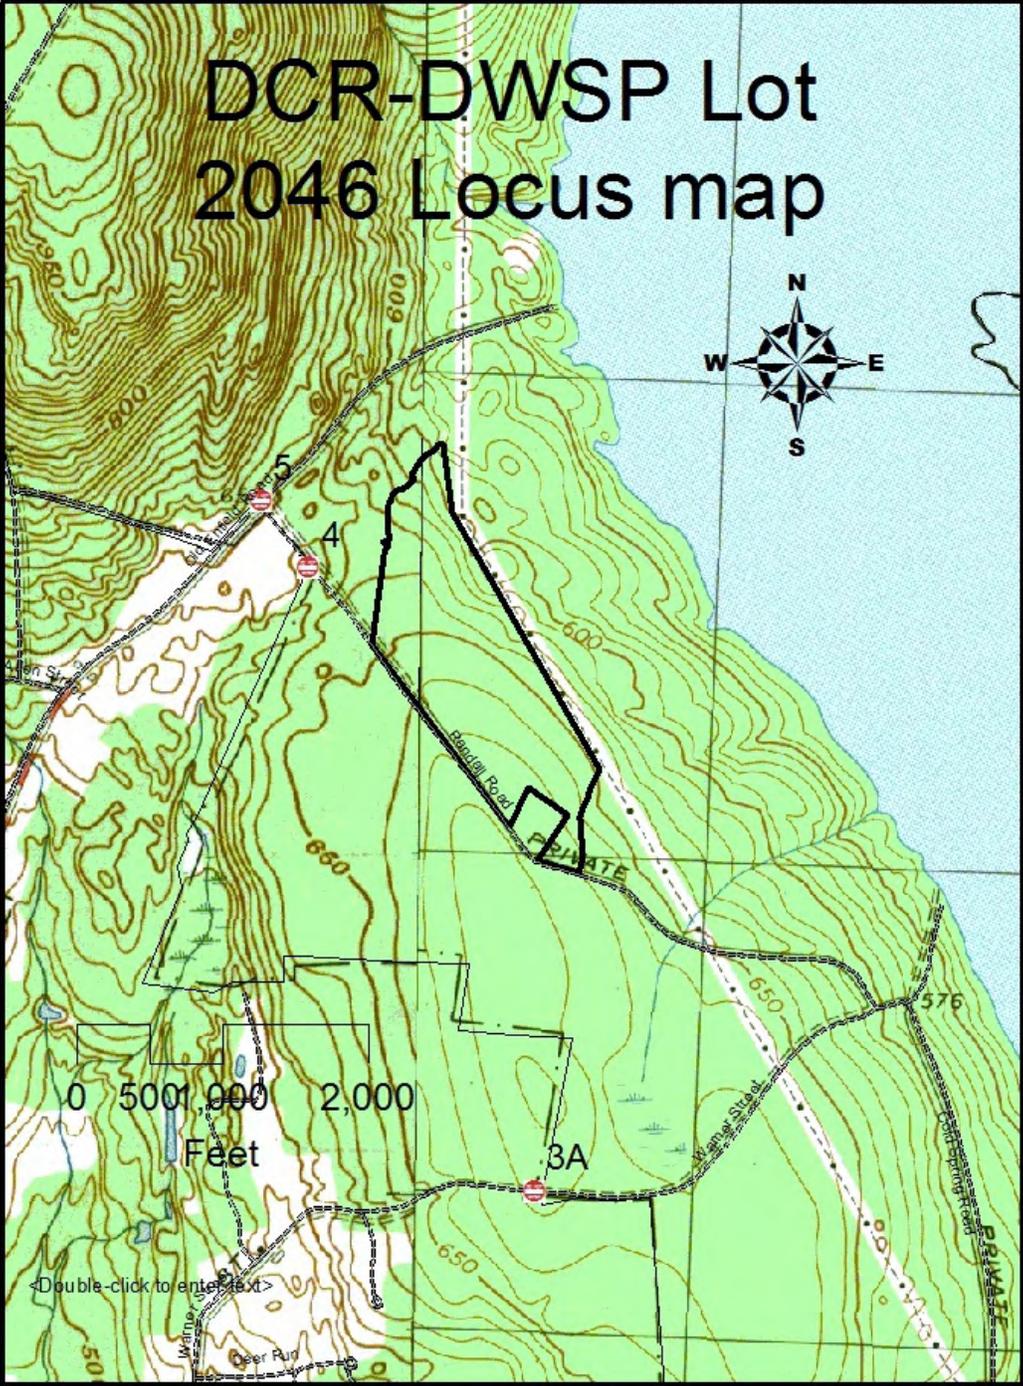

This is a remark of an old lot marking under different marking guidelines. CUT trees marked in "Orange". All others stay, this would include old red reserves, those blacked out and older faded paint. Lot is planned for cut to length systems Processors as well as hand felling allowed. Forwarder transport to landings required on the lot. Main roads flagged with black and orange strip flagging and orange painted arrows. Material will be decked along gravel road as well as on open landing sites. Locations where forwarder enters on the gravel road will be armored with Corduroy or other appropriate material ditch at road edge restored at end of the job. Eastern boundary of the lot along the power lines, Northern boundary the marked filter strip, Western boundary the gravel road, Southern boundary a woods road.

Goals for management Watershed protection forest, multiage structure as well as diverse species mix.
