

Massachusetts Department of Conservation and Recreation
Division of Water Supply Protection, Office of Watershed Management
Forest Management Project Summary

Project Title:

DWSP Harvest Permit Number: 3136
DCR Forest Cutting Plan File Number: 234-7336-15

Site Information

Watershed: Quabbin	Town(s): Petersham
Acres: 60	Nearest Road: Route 122
Natural Heritage Atlas overlap?: No	Public Drinking Water Supply Watershed?: Yes
Forest Types: Mixed Oak	ACEC?: No
Soils: Charlton Montauk loamy till with scattered granite-gneiss outcrops.	
Wetland Resources: None	
Vernal Pools present or within 200 feet of harvest: None	

Harvest Information

Harvest Start Date: After September 2016	Harvest End Date: December 7, 2018
Number of Wetland Crossings: None	Number of Stream Crossings: None

Best Management Practices Applied

Stream Crossings	There are no stream crossings.
Filter Strips	There are no filter strips.
Wetland Crossings	There are no wetland crossings.
Harvesting in Wetlands	There is no harvesting in wetlands.

DWSP Forester supervising this harvest

Name: Derek Beard
Forester License #: 14
Phone #: 978-544-6343
Email: derek.beard@state.ma.us

NARRATIVES

General Description/Forest Composition/History

This mix oak area is located on the west slope of Soapstone Hill roughly 3 miles south of gate 35 (Old North Dana Rd.). Scattered stone piles suggest the area was used as semi improved pasture prior to state ownership. The south end of Soapstone Hill is home to a vista accessed by a foot path traversing the ridge. An early 1980s salvage thinning removed gypsy moth infested oak. Understory consists of witch hazel, white pine and black birch.

Area substrate is a well drained rocky Charlton Montauk loamy till with scattered granite-gneiss outcrops.

Site Selection

The primary goal of the watershed forest management program is to create and maintain a forest that provides high quality drinking water to current users and future generations. In order to achieve this, DWSP has determined that the forest should contain a diversity of species in various stages of development (seedlings through large legacy trees). In addition, the forest should be vigorous; actively growing and regenerating. Forest in this condition is ideally suited to be resilient to and quickly recover from small and large scale disturbances such as disease, insect infestation, ice storms and hurricanes.

The area's mix oak forest has a very uniform overstory structure. Given the goal of structural diversity, this forest's lack of young or middle age development requires that some regeneration cutting begin.

Objectives

Diversifying the area's forest structure is the primary objective of the project. This will be accomplished by making a series of small forest openings randomly spaced through the area. Specifically, there are 29 openings covering 7.5 of the 60 acres with an average opening size of 1/3 acre. The well drained till soils are suited for hardwood regeneration. However, white pine is a possibility if the harvest is completed during a seed year.

Cultural Resources

There are several cellar holes in the vicinity of the log landing area. In addition, an old town marker was found on the northwestern edge of the project area. All features will be identified for protection during the operation.

Wildlife Resources

The harvest area does not overlap or abut any priority floral or faunal habitat as compiled by MA Fish & Wildlife's Natural Heritage & Endangered Species program. No unusual wildlife, or wildlife sign has been seen in, or adjacent to, the area. Maintenance of habitat mainly in the form of partially alive and dead standing trees, known as *snags*, will be a priority.

Landowner

Landowner Signature

The most important information on a cutting plan is the Landowner's objective, as this will determine which trees will be harvested and which will remain; this decision will also determine the future condition of the forest for decades to come. After having read the Massachusetts Forest Cutting Plan Information Sheet on page one, indicate your objective by checking the appropriate box below.

LT - Long-term Forest Management

Planned management of the forest to achieve one or more of the following objectives: produce immediate and maximize long-term income, enhance wildlife habitat, improve recreational opportunities, protect soil and water quality, or produce forest specialty products.

ST - Short-term Harvest

Harvest of trees with the main intention of producing short-term income with minimal consideration given to improving the future forest condition, which often results in a forest dominated by poor quality and low value species

I (we) have read the Massachusetts Cutting Plan Information Sheet, and am aware of my (our) management options.
 I (we) hereby certify that I (we) have the legal authority to carry out the operation described above.
 I (we) certify that I (we) have notified the Conservation Commission in the town in which the operation is to take place and the abutters of record within two hundred feet of the area to be harvested.
 I (we) understand that the volumes and values (Ch61 only) in this plan have not been independently verified by the service forester upon approval and will report final values and volumes to the Director or his/her agent if the final figures differ from those reported.

BMPs

Use this Section to provide further explanation or if Other (OT) was used in any category in the Best Management Practices Section on Page 3.

This group selection (small patch cuts) timber harvesting project consists of 27 canopy openings spread across 60 acres. Opening size ranges from one tenth acre to four tenths of an acre with an average of three tenths of an acre or 1/3 acre. The 27 openings cover a total of 7.5 acres.

A foot path bisects the harvest area. Skid roads cross the foot path in two locations. A 100 foot buffer either side of the foot path, where limited harvesting occurs, has been established (identified on the ground with neon pink flagging). Property line blazed and painted in 2014.

Designation of Trees

Use this Section to describe the types of trees to be harvested and/or retained if Other (OT) was used for "Designation of Trees" in the Stand Treatment Section on page 4.

Stand No.	Species to be Cut	Size of Trees to be Cut	Quality of Trees to be Cut	% BA/Acre Removed

Regeneration & Future Condition

Use this Section to describe how Chapter 132 requirements will be met if a non standard system (HG, DL, or OT) was used for the "Type of Cut" in the Cutting Standards Section on page 4.

Stand No.	Source of Regeneration (ex. AD, SE)	How will Regeneration be obtained/protected? If using AD - Describe the species present and how the regeneration will be protected If using SE - Describe the source of the seed and the number of seed trees/acre

Stand No. **Desired Future Condition**
Describe what the stand is expected to look like five years from the harvest, including the condition of the overstory & understory
