

Massachusetts Department of Conservation and Recreation
Division of Water Supply Protection, Office of Watershed Management
Forest Management Project Summary

Project Title:

DWSP Harvest Permit Number: 5256
DCR Forest Cutting Plan File Number:039-7701-16

Site Information

Watershed: Wachusett	Town(s): Boylston
Acres: 43	Nearest Road: Main St. (Rt. 70)
Natural Heritage Atlas overlap?: Yes	Public Drinking Water Supply Watershed?: Yes
Forest Types: White pine-oak/ Mixed oak	ACEC?: No
Soils: The Hinckley sandy loam, an excessively drained soil of outwash origin	
Wetland Resources: There are none within the sale area.	
Vernal Pools: None	

Harvest Information

DWSP Permit Start Date: 10/01/15	DWSP Permit End Date: 12/01/17
Number of Wetland Crossings: 0	Number of Stream Crossings: 0

Best Management Practices Applied

Stream Crossings	There are no stream crossings.
Filter Strips	While the sale area is bordered by the Wachusett Reservoir, no trees are marked within the distance from the reservoir that would necessitate the establishment of a filter strip.
Wetland Crossings	There are no wetland crossings.
Harvesting in Wetlands	There are no wetlands.

DWSP Forester supervising this harvest
Name: Greg Buzzell
Forester License #: 25
Phone #: 508-792-7806 x317

NARRATIVES

General Description/Forest Composition/History:

This area is located in Boylston on Sawyer's Bluff inside Gate 8 off of Main Street (Rt. 70). This is typical dry site, mixed oak and white pine forest. An early MDC map from about 1900 describes this area as "Burned-over sproutland: chestnut and oak" and "thick stand of red oak and chestnut, 2" to 6" . The entire area was interplanted with white pine seedlings in 1931. Much of this pine survives today. As is typical for stands of oak and pine growing on gravel soils, the pine is of good quality and vigor and is noticeably taller than the much slower growing and often, carpenter ant infested oaks. Most of the oak here is black oak although red and white oaks are present along with some red maple and the occasional hemlock. There is an excellent understory of regeneration due, in large part, to a harvest operation in 1993 in the area. The focus of this operation was to remove the poorest quality oaks while benefitting the white pines with the goal of establishing white pine regeneration.

Site Selection:

The ideal watershed protection forest is one which best serves the function of the land as a producer of high quality drinking water in both short- and long-term. This forest must be vigorous and diverse in tree species and ages, be actively accumulating biomass and actively regenerating. Such a forest will be ideally suited to be resilient to and quickly recover from small- and large-scale disturbances such as diseases, insect infestations, ice storms and hurricanes.

This area was selected for management because both within the forest of these 43 acres as well as in the forest of the much larger area from which water flows into the Wachusett Reservoir, there are too few acres of young forest. There is no young forest in this area and only 10% of the forest in this subwatershed, of which the DCR owns 1,086 manageable acres, is comprised of young trees less than 20 years old. The ideal protection forest would have closer to 1/3rd of the area growing young trees.

Silvicultural Objectives:

Given the excellent advance regeneration throughout this area, openings will be made in the overstory thereby releasing the young trees from the shade of the older and taller trees and creating a more diverse forest. Given the superior quality and growth rates of white pine compared to oaks on this site, the focus will be to create these openings where the pine regeneration is best. Throughout this area, 16 openings have been marked totaling 14.1 acres, ranging in size from 0.2 to 1.7 acres with an average size of 0.9 acres. These openings are well distributed with adequate spacing between the patches to allow for future patches of a similar range of sizes. Standards regarding green retention (live trees left within patches for structure and seed) have been followed.

Cultural Resources:

There are no known or documented significant historic or archeological resources in this area. This area has been determined to be "Not Sensitive" for the possible presence of Native American resources by the DCR Archeologist.

Wildlife/Rare or Endangered Species:

This treatment area falls within a NHESP Priority Habitat of Rare Species due to the presence of nesting loons and eagles at Wachusett Reservoir. Review of the planned operation by the NHESP program has determined that no negative impact to these species will occur.

Forest Products

Products to be Harvested*

Table with 4 columns: Species, Mbfs/Cds, Species, Mbfs/Cds. Rows include White Pine, Red Pine, Pitch Pine, Hemlock, Spruce, Other Sftwd., White Ash, Beech, White Birch, B & Y Birch, Black Cherry.

*Note: Volumes and values indicated in the Plan are as reported by the plan preparer and have not been independently verified by the service forester upon approval. Mbf = thousand board feet.

Stand Treatment

Cutting Standards

Table with 5 columns: Indicate location on map, ST-1, ST-2, ST-3, ST-4. Rows include Forest Type, Acres, Landowner Objective, Designation of Trees, Type of Cut, Source of Regeneration.

Landowner

Landowner Signature

The most important information on a cutting plan is the Landowner's objective, as this will determine which trees will be harvested and which will remain; this decision will also determine the future condition of the forest for decades to come.

[X] LT - Long-term Forest Management

Planned management of the forest to achieve one or more of the following objectives: produce immediate and maximize long-term income, enhance wildlife habitat, improve recreational opportunities, protect soil and water quality, or produce forest specialty products.

[] ST - Short-term Harvest

Harvest of trees with the main intention of producing short-term income with minimal consideration given to improving the future forest condition, which often results in a forest dominated by poor quality and low value species.

I (we) have read the Massachusetts Cutting Plan Information Sheet, and am aware of my (our) management options. I (we) hereby certify that I (we) have the legal authority to carry out the operation described above. I (we) certify that I (we) have notified the Conservation Commission in the town in which the operation is to take place and the abutters of record within two hundred feet of the area to be harvested. I (we) understand that the volumes and values (Ch61 only) in this plan have not been independently verified by the service forester upon approval and will report final values and volumes to the Director or his/her agent if the final figures differ from those reported.

Codes

Table with 4 columns: Forest Types, Designation of Trees, Type of Cut, Source of Regeneration. Lists various codes and their corresponding descriptions.

*If Other (OT) or a non-standard system is used an explanation must be given on attached narrative page pg 4 of 5

Forest Cutting Plan

Narrative Page

Use only if further explanation is required of information on pages one or two or if "other" was used in any category.

Landowner: _____

Town: _____

File Number: _____

BMPs	<p><u>There are no streams or wetlands on this excessively drained site. The landing(s) will be accessed by the excellent forest road frontage that is throughout this site.</u></p> <p><u>While the sale area intersects with the filter strip of the Wachusett Reservoir, there are no trees marked within the necessary distance from the reservoir to necessitate the establishment of a filter strip.</u></p>
Silviculture	<p><u>In order to release advance regeneration, 16 openings in the overstory are being created, covering 14.1 acres. These openings range from less than a 0.2 acres to 1.7 acres in size with an average of 0.9 acres. They are well distributed throughout the area taking advantage of the excellent advance regeneration comprised of white pine, oaks and other hardwoods. One area of thinning (1.3 acres) will occur on the northern side of the western block that will remove some oaks in order to daylight some pole size pine trees.</u></p>
Objectives	<p><u>The objective of this operation is to diversify the age structure of the forest by removing the overstory in patches thereby releasing the advance regeneration. The current age structure is limited with an insufficient component of young forest.</u></p>
Other	<p><u>The Natural Heritage GIS layer comes into the sale area (Priority Habitat # 779) approximately 500 feet all along the shoreline. This layer encompasses the entire reservoir and is due, at least in part, to the presence of nesting loons and eagles.</u></p>

Figure 3. General locus map showing the location of the proposed timber harvest

Figure 4. Pre-Harvest Photographs, A-C

A. The lot will be accessed through Gate 8 on Main St. (Rt. 70) in Boylston.

B. The white pine and oak overstory is being removed to release this thick understory which is dominated by young white pine saplings.

C. Another view of the thick white pine regeneration which will be released with the removal of this portion of the overstory. The larger white pine in the center-right of the photo is being retained in order to provide a more diverse structure to the forest.
