Re: Wayland
Sewer Connection Permit
Transmittal No. X235884

Dear Mr. Dougherty:

In response to your application for a sewer extension/connection permit to discharge into the sewer system at 400 Boston Post Road in Wayland, MA, and after due public notice, the Massachusetts Department of Environmental Protection (MassDEP) hereby issues the attached final permit.

As you are aware, MassDEP received extensive comments on the sewer connection permit application during the course of the public comment period and at a public hearing held at Wayland Town Hall on May 19, 2011. As a result of the public comments received, MassDEP has made several changes to the draft sewer connection permit issued on February 15, 2011. These changes include:

1. Modification of Special Conditions to address proper operation and maintenance of the proposed pump station, since the Wayland Wastewater Management District Commission (WWMDC) has not agreed at this time to accept responsibility for ownership, operation, and maintenance of the facility.
2. Modification of Special Conditions to include proper permitting of any industrial waste generated on the project site.
3. Modification of Special Conditions to include a requirement for grease traps at any and all restaurants on the project site.
4. Changes to the language in Special Conditions 3-7 to be more prescriptive on requirements for separation of wastewater and drinking water supply piping, and to prevent pollutants from affecting wetland resources.
5. Modifications to the Section 61 findings consistent with the changes noted above.

Since MassDEP received comments objecting to the issuance of the sewer connection permit, pursuant to 314 CMR 2.08, the attached final permit shall take effect 30 days from the issuance date.

This Permit is an action of the Department. Aggrieved parties may request an adjudicatory hearing. A Notice of Claim for an Adjudicatory Hearing must be made in writing and postmarked within thirty (30) days of the date this permit was issued. Pursuant to 310 CMR 1.01(6), the Notice of Claim shall state clearly and concisely the facts which are grounds for the proceeding and the relief sought.

The Notice of Claim, along with a valid check payable to the Commonwealth of Massachusetts in the amount of one hundred dollars (\$100.00), must be mailed to:

Commonwealth of Massachusetts
Department of Environmental Protection
P.O. Box 4062
Boston, MA 02211

The Notice will be dismissed if the filing fee is not paid, unless the appellant is exempt or granted a waiver as described in 310 CMR 4.00. If you have any questions regarding this matter, please contact me at 978-694-3236.

Sincerely,

Kevin Brander, P.E.

Important: When filling out forms on the computer, use only the tab key to move your cursor - do not use the return key.

The original of the transmittal form and this application, signed by the appropriate municipal official, should be submitted along with one copy to the appropriate Regional Office. The signature of the design engineer or other agent will be accepted only if accompanied by a letter of authorization. A copy of the transmittal form and fee (if applicable) should be submitted to the Boston Office.

If connection is to be made to the MWRA sewerage system, indicate "MWRA" in item 11.

If the project includes sewers, pumping stations, force mains, or siphons, construction plans must be submitted with the application.

If additional space is required to properly answer any questions, please attach additional sheets and refer to the attachments in the space provided.

10. Does the discharge contain any industrial waste? Yes No

If yes, list any pollutants which you know or have reason to believe are discharged or may be discharged. For every pollutant you list, please indicate its approximate concentration in the discharge and any analytical data in your possession which will support your statement. Additional wastewater analysis may be required as part of this application.

Pollutant	Concentration	Analytical Data
_____	_____	_____
_____	_____	_____
_____	_____	_____

11. Does the discharge contain any industrial waste containing substances or materials which could harm the sewers, wastewater treatment process, or equipment; have an adverse effect on the receiving water; or could otherwise endanger life, limb, public property, or constitute a nuisance?

Yes No

B. Project Information:

8. Project Description: The project proponent, Twenty Wayland, LLC proposes to develop a 372,500+/- sf mixed use development project, known as "Wayland Town Center" on a 56.5ac parcel of land situated north of RT 20 and west of RT 27 in Wayland, MA. The subject site is partially developed and is currently occupied by a 410,000sf vacant commercial building with associated parking formerly occupied by the Raytheon Company and currently connected to the Town's wastewater treatment plant. The wastewater treatment plant is located within the northern portion of the property and has a permit to treat approximately 52,000gpd of sewage (average daily flow). Treated effluent is discharged via a thirty six inch (36") pipe to the Sudbury River. The Project Proponent has an agreement with the Town of Wayland that the Wayland Town Center project has the right to discharge 45,000gpd of sewage to the wastewater treatment plant.

All of the sanitary sewage generated by the Wayland Town Center project to be discharged to the town's wastewater treatment plant will be collected and conveyed via a new eight (8") inch gravity sewer main that will be constructed as part of the Wayland Town Center project. Sanitary Sewage will flow via gravity to the southern portion of the property to a sewer pump station located approximately one hundred and ninety feet (190') easterly of Building 3-A. The proposed on-site sewer pump station will be constructed by the Applicant but ultimately owned and operated by the Wayland Wastewater Management District Commission. Sewage will be pumped to the Town of Wayland's wastewater treatment plant for treatment and disposal.

D. General Conditions

1. General Conditions

- a. All discharge authorized herein shall be consistent with the terms and conditions of this permit and the approved plans and specifications. The discharge of any wastewater at a level in excess of that identified and authorized by this permit shall constitute a violation of the terms and conditions of this permit. Such a violation may result in the imposition of civil and/or criminal penalties as provided for in Section 42 of the State Act.
- b. After notice and opportunity for a hearing, this permit may be modified, suspended, or revoked in whole or in part during its term for cause including, but not limited to, the following:
 - (1) Violation of any terms or conditions of the permit;
 - (2) Obtaining a permit by misrepresentation or failure to disclose fully all relevant facts; and
 - (3) A change in conditions or the existence of a condition which requires either a temporary or permanent reduction or elimination of the authorized discharge.
- c. In the event of any change in control or ownership of facilities from which the authorized discharges originate, the permittee shall notify the succeeding owner or operator of the existence of this permit by letter, a copy of which shall be forwarded to the Director. Succeeding owners or operators shall be bound by all the conditions of this permit, unless and until a new or modified permit is obtained.

BRP WP 55, 71, 74

D. General Conditions (continued)

- d. The issuance of this permit does not convey any property rights in either real or personal property, or any exclusive privileges; nor does it authorize or relieve the permittee of any liability for any injury to private property or any invasion of personal rights; nor any infringement of Federal, State, or local laws or regulations; nor does it waive the necessity of obtaining any local assent required by law for the discharge authorized herein.
- e. The provisions of this permit are severable, and the invalidity of any condition or subdivision thereof shall not make void any other condition or subdivision thereof.
- f. All information and data provided by an applicant or a permittee identifying the nature and frequency of a discharge shall be available to the public without restriction. All other information (other than effluent data) which may be submitted by an applicant in connection with a permit application shall also be available to the public unless the applicant or permittee is able to demonstrate that the disclosure of such information or particular part thereof to the general public would divulge methods or processes entitled to protection as trade secrets in accordance with the provisions of M.G.L. c.21, s.27(7). Where the applicant or permittee is able to so demonstrate, the Director shall treat the information or the particular part (other than effluent data) as confidential and not release it to any unauthorized person. Such information may be divulged to other officers, employees, or authorized representatives of the Commonwealth or the United States Government concerned with the protection of public water or water supplies.
- g. Transfer of Permits
 - (1) Any permit issued pursuant to these regulations is valid only for the person to whom it is issued, unless prior to transfer:
 - (a) The current permittee notifies the Department at least 30 days in advance of the proposed transfer date; and
 - (b) The notice includes a written agreement between the existing and new permittees containing a specific date for transfer of permit responsibilities and liability to the new permittee.

SPECIAL CONDITIONS

PERMIT NO. X235884

1. This permit authorizes a discharge of up to 45,000 gallons per day (gpd) from the project specified within the permit, subject to the following phasing and restrictions:
 - a) While the permittee may construct facilities to collect and convey wastewater from the Twenty Wayland LLC project site to the Wayland Wastewater Management District Commission (WWMDC) treatment facility, no wastewater may be discharged, until such time as the work to upgrade the WWMDC treatment facility is completed, unless otherwise approved by MassDEP in writing.
 - b) Phase I of the Twenty Wayland LLC project shall be limited to 28,000 gallons per day (gpd) in design flow, as included in the permit application and documented below:

Use	Flow basis	Units	Flow (gpd)
Supermarket	97 gpd/1,000 ft ²	45,000 ft ²	4,365
Office	75 gpd/1,000 ft ²	10,000 ft ²	750
Retail	50 gpd/1,000 ft ²	52,700 ft ²	2,635
Restaurant	35 gpd/seat	350 seats	12,250
Residential	110 gpd/bedroom	72 bedrooms	8,000
		Total Flow:	28,000 gpd

- c) Phase II of the Twenty Wayland LLC project includes the discharge of an additional 17,000 gpd of design flows. The permittee may request MassDEP approval to connect discharges from Phase II at any time after establishing actual wastewater flows from Phase I, subject to the sole discretion of MassDEP as to the satisfactory documentation of actual flows and compliance with 314 CMR 7.00. Any request for approval to connect flows from Phase II shall include, at a minimum, the following information:
 - i. A detailed summary of actual flows from Phase I facilities and associated occupancy, which shall be collected over a period adequate to characterize average and peak flows from the Phase I facilities.
 - ii. A summary of flow data from the WWMDC treatment facility to document remaining treatment facility capacity.
 - iii. A summary of design flows for Phase II facilities, which shall be limited to a total of 17,000 gpd of additional flow.

MassDEP's determination to approve or deny the request to connect flows from Phase II of the Twenty Wayland LLC project will rely on any and all issues considered essential to ensuring compliance of the WWMDC treatment facility with its National Pollutant Discharge Elimination System (NPDES) discharge permit, or any draft or final WWMDC groundwater discharge permit. This review will include, but not be limited to, actual average day and peak day flows at the treatment plant; actual flows from the Twenty Wayland LLC Phase I project; design flows associated

with projects which have received approval from WWMDC and/or MassDEP for future connections to the treatment facility; construction of facilities to support a groundwater discharge permit; issuance of a groundwater discharge permit to WWMDC; and compliance history of the WWMDC facility with the terms and conditions of its NPDES permit.

2. The project shall be constructed according to the plans received by the Department dated January 5, 2011 unless otherwise directed by this permit. The plans consist of nine sheets and are titled as follows:

Title: WAYLAND TOWN CENTER

Location: 400 – 440 BOSTON POST ROAD

Municipality: WAYLAND

Applicant: TWENTY WAYLAND, LLC.

Engineer: R.J. O'CONNELL AND ASSOCIATES

Date: 12 NOVEMBER 2010 REVISED 1/5/2011

Any deviation from the approved plans shall require review and written approval from the Department.

3. Sewers shall be kept remote from public water supply wells or other potable water supply sources and structures. Wherever feasible, sewers shall be laid at a minimum of 10 feet, horizontally, from any existing or proposed water main. Should local conditions prevent a lateral separation of 10 feet to a water main, the water main shall be laid in a separate trench and the elevation of the crown of the sewer placed at least 18 inches below the invert of the water main.
4. Whenever the sewer must cross under water mains, the sewer shall be laid at such an elevation that the crown of the sewer is at least 18 inches below the invert of the water main. When the elevation of the sewer cannot be varied to meet this requirement, the water main shall be relocated to provide this separation or constructed with mechanical-joint pipe for a distance of 10 feet on each side of the sewer. One full length of water main shall be centered over the sewer so that both joints will be as far from the sewer as possible.
5. Solid, gasketed and lockable manhole covers shall be used in areas designated as a buffer zone of any wetlands or in any area designated as a 100-year flood plain.
6. All sewer piping and/or structures crossing within the buffer zone (100 feet) of any wetlands shall be built using watertight construction methods and materials.

7. All sewer piping and/or structures crossing under or within 100 feet of any surface waterbody or stormwater impoundment shall be built using watertight construction methods and materials.
8. The pump station shall have an alarm system that will transmit real-time warning of a malfunction at the facility to a manned facility or an auto-dialer.
9. The pump station shall be provided with a source of emergency stand-by power.
10. Ballast shall be provided, as necessary, to assure the pump station will not float when empty and the groundwater level is at grade.
11. At least 60 days prior to startup of the pump station, the permittee shall submit to MassDEP documentation that there will be provisions assuring proper operation and maintenance of the pump station. Such documentation shall consist of:
 - a. A written agreement between the permittee and the Wayland Wastewater Management District Commission (WWMDC) to transfer ownership, and responsibilities for operation and maintenance to WWMDC, and the schedule for doing so; or
 - b. An Operation & Maintenance Plan for the pump station, which shall include, at a minimum:
 - i. A list of contacts who will be in responsible charge of the operation of the pump station;
 - ii. A schedule for routine inspections and maintenance of the pump station facilities, including the emergency generator;
 - iii. Protocols for responding to pump station malfunctions, or alarm conditions; and
 - iv. A financial assurance mechanism, in the form of an escrow account in the amount of 15% of the pump station construction cost, to establish and secure funds necessary for any immediate repair needs.
12. Thrust blocks shall be provided at all bends and changes of direction of the force main.
13. The construction of the proposed sewer project shall be completed within five (5) years of the date of issue of this permit.
14. An application for permit renewal shall be submitted in a timely manner, if the construction of the proposed sewer project will extend beyond the five (5) year period as indicated in Special Condition No. 13.
15. Any future connection, extension, modification or increase in flow to the sewer appurtenances that are covered by this permit are subject to the provisions of 314 CMR

7.00 and may require a separate sewer connection permit application or certification as may be specified by 314 CMR 7.00 and 310 CMR 4.00.

16. Any transfer of this permit in whole or in part shall be in accordance with 314 CMR 7.13.
17. Discharge of industrial wastewater is prohibited, unless otherwise permitted in accordance with MassDEP regulations at 314 CMR 7.00, and subject to any additional requirements of the Wayland Wastewater Management District Commission.
18. Grease traps shall be installed at any connections to restaurants, supermarkets with prepared foods, and any other facilities on the project site which use or generate significant quantities of fats, oil, and grease, pursuant to the requirements of MassDEP, the state plumbing code, and the Wayland Wastewater Management District Commission.
19. The permittee shall comply with the mitigation measures described in the attached Section 61 Findings.

**MASSACHUSETTS DEPARTMENT OF ENVIRONMENTAL PROTECTION
M.G.L. c.30, S 61 FINDINGS MADE PURSUANT TO 301 CMR 11.00.**

EOEA PROJECT NAME: TWENTY WAYLAND/TOWN CENTER PROJECT

PROJECT PROPONENT: TWENTY WAYLAND, LLC

MUNICIPALITY: WAYLAND

EOEA NUMBER: 13844

INTRODUCTION

The Department of Environmental Protection (DEP) makes these Section 61 findings for the project noted above, in accordance with the provisions of M.G.L. c. 30 Section 61 and 301 CMR 11.00.

PROJECT DESCRIPTION:

The proposed project (the "project") consists of a mixed use development on a site formerly occupied by the Raytheon Company on Boston Post Road (Route 20) in Sudbury, MA. The project includes 155,000 square feet of residential space (100 units); 177,000 square feet of non-residential area, which includes a maximum of 156,750 square feet of retail space and a maximum of 22,000 square feet of office space. In addition, the Town of Wayland will be deeded a parcel within the development for construction of a 40,000 square foot Municipal Building.

MEPA REQUIREMENTS:

An Environmental Notification Form (ENF) for the project was filed and the Secretary of Energy and Environmental Affairs (the Secretary) issued a Certificate on the ENF specifying the scope for an Environmental Impact Report (EIR) on August 25, 2006. Both the Draft and Final EIR required the project proponent to discuss and recommend alternatives for wastewater management for the project. During the comment phase, MassDEP had expressed concerns in its written comments submitted to the Massachusetts Environmental Policy Act (MEPA) Office about the remaining capacity at the Wayland Wastewater Management District Commission (WWMDC) wastewater treatment plant, and limitations posed by on-site wastewater disposal systems. The FEIR was filed with the Secretary and on March 28, 2008 and a certificate on the Final EIR was issued by the Secretary of Energy and Environmental Affairs, which stated that the project adequately and properly complied with MEPA (G.L. c. 30, ss. 61-62H) and its implementing regulations (301 CMR 11.00).

DEP SEWER PERMIT AND MITIGATION:

It is anticipated that the project, including the Town's parcel, will generate up to 54,900 gallons per day of wastewater flow. It is the project proponent's intention to discharge 45,000 gallons of wastewater per day to the Town's sewer system, and to discharge 9,900 gallons per day to an on-site system, regulated under 310 CMR 15.000 (Title 5). The on-site system will be subject to the review and approval of the Town of Wayland Board of Health. The discharge of 45,000 gallons per day to the Town's sewer system will be subject to a MassDEP sewer connection permit. Given the capacity constraints under the National Pollutant Discharge Elimination System (NPDES) permit for the Town's wastewater treatment plant, MassDEP will be phasing authorization of discharges under the sewer connection permit to ensure compliance with the flow limits in NPDES permit. Any flows determined to be above the NPDES flow limit must be properly managed and permitted in accordance with the terms and conditions of the MassDEP sewer connection permit, and any other federal, state, or local permit required by law.

This project will employ several on-site water conservation techniques which will reduce the estimated project demand and have a corresponding reduction in wastewater generation. Some of these techniques include use of low consumption showerheads, 1.6 gallon water closets, and 1.5 gallon per minute flow controllers on faucets. Special Conditions of the sewer connection permit require that emergency stand-by power for the pump station be provided and watertight construction be employed of all sewer piping and/or structures crossing within 100 feet of any surface waterbody or stormwater impoundment, and that the pump station be properly operated and maintained.

The Certificate issued by the Secretary on the FEIR directed the proponent to consult with the Massachusetts Historical Commission and the Wayland Historical District Commission in implementing the project. Such actions should also precede the construction of the proposed sewer system and sewer connection to the WWMDC.

SECTION 61 FINDINGS:

The Department has reviewed and commented on the MEPA documents and the documents submitted in connection with the application for a permit. Based upon its review, the Department finds that implementation of the terms and conditions of this permit constitute all feasible measures to avoid damage to the environment and will minimize and mitigate such damage to the maximum extent practicable. Implementation of the mitigation measures will occur in accordance with the terms and conditions set forth in this permit.
