

Summary Results of Recent Lead and Copper Drinking Water Testing at Mass. Schools - Current as of 06/16/2017

This list summarizes sampling results for lead and copper in drinking water at schools and early education & childcare facilities (EECFs) that have been reported to MassDEP through its electronic data reporting system (eDEP). It is sorted alphabetically by town. It includes schools and EECFs that have sampled fixtures as part of the Commonwealth's Assistance Program for Lead in School Drinking Water, as well as other sampling conducted at schools via other efforts. These results may not reflect all samples taken at each school or early education & childcare facility (EECF) because the laboratory may not have completed their work and/or the school may collect additional samples. Check back for updates that cover any additional results. A school's status may change as additional results are reported to MassDEP. As this is a summary of all results, if a school or EECF at any time detects lead and/or copper above the action level the results column will indicate "... Above the Action Level" regardless of follow-up sampling below the action level. For a more accurate and current status of lead and copper sampling at schools and EECF refer to the details fixture-by-fixture spreadsheet at <http://www.mass.gov/eea/agencies/massdep/water/drinking/lead-and-copper-in-school-drinking-water-sampling-results.html>. Data is made available to the public two weeks after sampling results are submitted to MassDEP through eDEP. This allows schools and EECFs time to post all remediation actions taken at fixtures with lead and/or copper action level exceedances in the Lead and Copper Reporting Tool. This list will be updated on a weekly basis.

For detailed fixture-by-fixture sampling results, go here:

For a more accurate and current status of lead and copper sampling at schools and EECF refer to the details fixture-by-fixture spreadsheet at <http://www.mass.gov/eea/agencies/massdep/water/drinking/lead-and-copper-in-school-drinking-water-sampling-results.html>. Data is made available to the public two weeks after sampling results are submitted to MassDEP through eDEP. This allows schools and EECFs time to post all remediation actions taken at fixtures with lead and/or copper action level exceedances in the Lead and Copper Reporting Tool. This list will be updated on a weekly basis.

For detailed fixture-by-fixture sampling results, go here:

<http://www.mass.gov/eea/agencies/massdep/water/drinking/lead-and-copper-in-school-drinking-water-sampling-results.html>

Summary Results of Recent Lead and Copper Drinking Water Testing at Mass. Schools - Current as of 06/16/2017

This list summarizes sampling results for lead and copper in drinking water at schools and early education & childcare facilities (EECFs) that have been reported to MassDEP through its electronic data reporting system (eDEP). It is sorted alphabetically by town. It includes schools and EECFs that have sampled fixtures as part of the Commonwealth's Assistance Program for Lead in School Drinking Water, as well as other sampling conducted at schools via other efforts. These results may not reflect all samples taken at each school or early education & childcare facility (EECF) because the laboratory may not have completed their work and/or the school may collect additional samples. Check back for updates that cover any additional results. A school's status may change as additional results are reported to MassDEP. As this is a summary of all results, if a school or EECF at any time detects lead and/or copper above the action level the results column will indicate "... Above the Action Level" regardless of follow-up sampling below the action level. For a more accurate and current status of lead and copper sampling at schools and EECF refer to the details fixture-by-fixture spreadsheet at <http://www.mass.gov/eea/agencies/massdep/water/drinking/lead-and-copper-in-school-drinking-water-sampling-results.html>. Data is made available to the public two weeks after sampling results are submitted to MassDEP through eDEP. This allows schools and EECFs time to post all remediation actions taken at fixtures with lead and/or copper action level exceedances in the Lead and Copper Reporting Tool. This list will be updated on a weekly basis.

Summary Results of Recent Lead and Copper Drinking Water Testing at Mass. Schools - Current as of 06/16/2017

This list summarizes sampling results for lead and copper in drinking water at schools and early education & childcare facilities (EECFs) that have been reported to MassDEP through its electronic data reporting system (eDEP). It is sorted alphabetically by town. It includes schools and EECFs that have sampled fixtures as part of the Commonwealth's Assistance Program for Lead in School Drinking Water, as well as other sampling conducted at schools via other efforts. These results may not reflect all samples taken at each school or early education & childcare facility (EECF) because the laboratory may not have completed their work and/or the school may collect additional samples. Check back for updates that cover any additional results. A school's status may change as additional results are reported to MassDEP. As this is a summary of all results, if a school or EECF at any time detects lead and/or copper above the action level the results column will indicate "... Above the Action Level" regardless of follow-up sampling below the action level. For a more accurate and current status of lead and copper sampling at schools and EECF refer to the details fixture-by-fixture spreadsheet at <http://www.mass.gov/eea/agencies/massdep/water/drinking/lead-and-copper-in-school-drinking-water-sampling-results.html>. Data is made available to the public two weeks after sampling results are submitted to MassDEP through eDEP. This allows schools and EECFs time to post all remediation actions taken at fixtures with lead and/or copper action level exceedances in the Lead and Copper Reporting Tool. This list will be updated on a weekly basis.

For detailed fixture-by-fixture sampling results, go here:

<http://www.mass.gov/eea/agencies/massdep/water/drinking/lead-and-copper-in-school-drinking-water-sampling-results.html>

Worcester	Abby Kelley Foster Charter Public School	Both Lead and Copper Above Action Level
Worcester	Greendale Head Start	Lead and Copper Below Action Level
Worcester	Millbury Street Head Start	Lead and Copper Below Action Level
Worcester	Mill Swan Head Start	Lead and Copper Below Action Level
Worcester	Adult Learning Center (Fanning Building)	Both Lead and Copper Above Action Level
Worcetser	Claremont Academy	Lead and Copper Below Action Level
Worthington	R. H. Conwell	Lead and Copper Below Action Level

Summary Results of Recent Lead and Copper Drinking Water Testing at Mass. Schools - Current as of 06/16/2017

This list summarizes sampling results for lead and copper in drinking water at schools and early education & childcare facilities (EECFs) that have been reported to MassDEP through its electronic data reporting system (eDEP). It is sorted alphabetically by town. It includes schools and EECFs that have sampled fixtures as part of the Commonwealth's Assistance Program for Lead in School Drinking Water, as well as other sampling conducted at schools via other efforts. These results may not reflect all samples taken at each school or early education & childcare facility (EECF) because the laboratory may not have completed their work and/or the school may collect additional samples. Check back for updates that cover any additional results. A school's status may change as additional results are reported to MassDEP. As this is a summary of all results, if a school or EECF at any time detects lead and/or copper above the action level the results column will indicate "... Above the Action Level" regardless of follow-up sampling below the action level. For a more accurate and current status of lead and copper sampling at schools and EECF refer to the details fixture-by-fixture spreadsheet at <http://www.mass.gov/eea/agencies/massdep/water/drinking/lead-and-copper-in-school-drinking-water-sampling-results.html>. Data is made available to the public two weeks after sampling results are submitted to MassDEP through eDEP. This allows schools and EECFs time to post all remediation actions taken at fixtures with lead and/or copper action level exceedances in the Lead and Copper Reporting Tool. This list will be updated on a weekly basis.
