Asnacomet (Comet) Pond, Hubbardston

General Information

Asnacomet Pond, commonly called Comet Pond, is a 136-acre Great Pond located just north of the junction of Routes 68 and 62 in Hubbardston. The average depth of Comet Pond is 29 feet with a maximum depth of 54 feet. The water is exceptionally clear and infertile, and aquatic vegetation is sparse. Around half of the shoreline is developed with year-round homes and summer cottages. Cold, clear water, little aquatic vegetation, and an abundance of deeper areas make Comet Pond a destination trout fishery.

Recreational Access

The Department of Conservation and Recreation (DCR) manages a concrete boat ramp and paved 40 car parking lot (71°58'45.383'W 42°26'54.835N) off Route 62. Shoreline access is good and extends up the southeastern shore. In the spring and fall, shore access is also available at the swimming beach off of Route 68. There is a 20 horsepower limit for 2-stroke engines and a 25 horsepower limit for 4-stroke engines. Please contact the offices of Dunn State Park for additional information and/or restrictions pertaining to public access of Comet Pond.

Fish Populations

The following fish species were found during MassWildlife surveys: Smallmouth Bass, Largemouth Bass, Chain Pickerel, Yellow Perch, Pumpkinseed, Bluegill, Rainbow Smelt, Brown Bullhead, Banded Killifish, White Sucker, and Golden Shiner. Asnacomet Pond is also stocked with trout each spring and fall.

Fishing

Comet Pond maintains a layer of cold oxygenated water throughout the warm summer months which enables trout to holdover for multiple seasons. While an occasional large (2lb+) trout is taken, anglers will be mostly fishing for recently stocked fish, which are plentiful. The pond's elongated shape is ideal for trolling, and there are lots of spots on shore where fishermen can cast. Comet Pond also freezes early, holds ice late, and is a popular icefishing location. As a result, Comet Pond can be a busy location regardless of season. Comet Pond has produced Black Crappie, Brown Bullhead, Brown Trout, Brook Trout, Rainbow Trout, Tiger Trout, and Yellow Perch that meet minimum sizes for recognition by the Freshwater Sportfishing Awards Program.
