

SAFIS eTRIPS Responsive Design Updates

Modernizing the look of SAFIS, and creating an improved user experience on mobile devices and smaller screens.

Implementation: Monday, March 23, 2015

New Login Page

This update does not change the functionality of the website. The link is not changing, and everything will work as it did before, but the site will have a new, more modern look. This is a precursor to a larger redesign currently in development.

New Trip Reports Screen

Notice that instead of scrolling the entire screen to the right to see the all of the effort fields, you will now use the scroll bar within the effort section. The same is true for the catch section, and, on smaller screens, the trip header section.

Responsive Design Example

The most noticeable changes will occur on smaller screens. This is an example of what the home screen may look like on a smartphone. Objects on the page may reorder themselves to create the most functional design for the screen size. Again, the functionality and how the components and links work are the same, only the design has changed.
