      Stancel Riley, Executive Director, Board of Registration in Medicin
      Jean Pontikas, Director, Division of Health Profession Licensure
      Rula Harb, Executive Director, Board of Registration in Nursing
      Sally Graham, Executive Director, Board of Registration of Physician
      Assistants
      Abdullah Rehayem, Director, Office of Emergency Medical Services

DATE: February 4, 2010

Introduction:

This is to notify you of a demonstration program to implement a MOLST (Medical
Orders for Life-Sustaining Treatment) process and form in select Worcester area health
care settings, starting in early spring, 2010.

In its April 2008 Annual Report, the Massachusetts Health Care Quality and Cost
Council (“MHCQCC”) recommended that Massachusetts establish a pilot program to
improve communication across health care settings regarding patient preferences about
end of life treatments. In its report, the MHCQCC found widespread evidence that
many patients nearing the end of life lacked awareness of treatment options and had not discussed their preferences for treatment and care with their clinicians. Further, the MHCQCC noted that even when such discussions did occur and the clinician documented patient treatment choices in the patient’s medical chart, the medical system lacked a mechanism to ensure that such documentation would be communicated and honored by clinicians across health care settings. Following this recommendation, in August, 2008, the Legislature enacted Chapter 305, Section 43 of the Acts of 2008, which, in part, requires that the Executive Office of Health and Human Services (“EOHHS”) establish a pilot program to test the implementation of a POLST Paradigm program “to assist individuals in communicating end-of-life care directives across care settings in a least 1 region of the commonwealth.”

Although the demonstration program will be implemented in select health care facilities located in the Worcester area, the Department of Public Health (“DPH”) is circulating this announcement state-wide to provide clinicians with background information about the MOLST process, form, and the Massachusetts Medical Orders for Life-Sustaining Treatment demonstration program (“MA MOLST program”).

**MA MOLST Demonstration Program:**

The MA MOLST Program is being coordinated and managed by the UMass Medical School-Commonwealth Medicine Center for Health Policy and Research, with oversight from a 30-member broad-based Steering Committee, chaired by representatives from DPH and the Office of Elder Affairs. The goals of the MA MOLST Program are: 1) to facilitate discussions between clinicians and their patients nearing the end of life about treatment options and preferences for care; and 2) to provide clinicians and their patients with a mechanism for translating these preferences into portable signed medical orders (through the use of a MOLST form) which travel with the patient and can be honored across health care settings.

Modeled on a nation-wide initiative known as the POLST (Physician Orders for Life-Sustaining Treatment) Paradigm Program\(^1\), the MA MOLST Program is similar to programs currently in effect in all or parts of twenty (20) states within this country. Such programs are grounded on well-established legal and ethical principles involving patient self-determination and a patient’s right to accept or refuse medically-indicated treatments, including life-sustaining treatments. MOLST is intended for voluntary use by patients nearing the end of life due to serious advancing medical conditions, including but not limited to life-threatening diseases, chronic progressive diseases, life-threatening injuries or medical frailty. Clinicians can collaborate with the patient, health care agent or guardian to complete a concise document—the MOLST form—that reflects the patient’s preferences for medically-indicated treatments. When completed and signed by the patient and attending physician, nurse practitioner or physician assistant, the patient’s MOLST form constitutes an actionable medical order that can be recognized and honored across treatment settings.

\(^1\) See [www.polst.org](http://www.polst.org) for more information.
Attached is a sample form entitled Massachusetts Medical Orders for Life-Sustaining Treatment (MOLST) that will be used in the MA MOLST demonstration program. The front side of the form is designed to be easily accessible to all health professionals and particularly useful to EMS personnel in emergency settings. The form is similar to the form currently honored by EMS personnel under the Comfort Care/Do Not Resuscitate (“CC/DNR”) Verification protocol established by DPH’s Office of Emergency Medical Services (“OEMS”). Please note that because the MOLST processes and form are not being implemented state-wide at this time, the CC/DNR Verification protocol will remain valid in the MOLST demonstration area and throughout the Commonwealth.

The MOLST form contains instructions relating to three treatment options: A) cardiopulmonary resuscitation in the case of cardiac or respiratory arrest (either “do not resuscitate” or “attempt resuscitation”); B) intubation and ventilation (“do not intubate and/or ventilate” or “intubate and/or ventilate” and C) transfer to hospital (“do not transfer to hospital, unless needed for comfort” and “transfer to hospital”) and requires the signatures of both the clinician and the patient or health care agent/guardian. The back side of the MOLST form contains the patient’s preferences about other medically-indicated treatments that may be offered in a clinical setting, including respiratory support, dialysis, artificial nutrition, artificial hydration and any other preferences the patient chooses to document.

The DPH, the Boards of Registration in Nursing and Physician Assistants and the MA Board of Registration in Medicine support the use of the MOLST process and form as an appropriate way to meet the standard of care for communicating patient preferences regarding life-sustaining treatment options. Further, given the intent of the MOLST demonstration project, DPH, the Boards of Registration in Nursing and Physician Assistants and the MA Board of Registration in Medicine encourage all health professionals to honor valid MOLST forms as bona fide medical orders.

**Implementation Plan:**

The MA MOLST demonstration program will be implemented in the following health care settings: UMass Memorial Medical Center, St. Vincent Hospital; Shrewsbury Nursing and Rehabilitation Center; Notre Dame Long Term Care Center and Hospice; Jewish Healthcare Center and Hospice; UMass Memorial Home Health & Hospice; VNA Care Hospice; Fallon Clinic, and EMS services in Worcester County. It is expected that the actual MOLST process and form will go into use within the implementation sites by late March, 2010.

In order to fully prepare for this activation, the MA MOLST Program, together with DPH staff and other EOHHS representatives are proceeding with the following steps:

- Training MOLST signatories (physicians, nurse practitioners and physician assistants) and other health professionals (nurses, EMTs, social workers, and other staff) in the demonstration sites about the MOLST process and form;
• Conducting outreach and education to other health providers and stakeholders in the greater Worcester area that may encounter patients with MOLST forms;

• Conducting outreach and education to inform potential consumers (patients, their families and caregivers) in the demonstration sites and Worcester area about the MOLST program;

• Convening a MOLST launch event for Worcester-area health professionals, consumers, and other interested stakeholders, on February 10 in Worcester;

• Posting MOLST information, resources and materials to a MOLST website (at: www.molst-ma.org) to be accessible by March 2010;

• Finalizing the design of the evaluation and quality improvement measures to be utilized to test the efficacy of the demonstration program and to make recommendations for a state-wide expansion of the MOLST process and form;

• Submitting a report to the Legislature regarding the findings of this demonstration program and recommendations for state-wide implementation of MOLST by December 2010.

Conclusion:

In closing, we want to acknowledge the tremendous amount of work that has already been accomplished to develop a MA MOLST demonstration program that is tailored to patient needs and the Massachusetts health care system. We would like to thank all those who have participated in this effort. We also would like to extend our appreciation to the demonstration sites that have agreed to implement the MOLST process and form with their patients. We thank you for your participation and for all of your work to further this important patient-centered care initiative.
