Chief Medical Officers
Chief Nursing Officers

FROM: Madeleine Biondolillo, MD, Bureau Director
Iyah Romm, Policy Director

SUBJECT: (1) Reducing or Eliminating the Need for Boarding of Patients in the Hospital
Emergency Department, and
(2) Authorization and Guidelines for Use of Alternate Space for Treatment of
Ambulatory Patients Presenting with Influenza-like Illness (ILI)

DATE: January 14, 2013

This flu season may prove to be especially challenging for all health care practitioners and facilities. Accordingly, It is recommended that all health care workers including emergency medical service personnel receive annual influenza vaccination.¹ As part of ongoing statewide preparations and to address the potential influx of patients with Influenza-like Illness (ILI) to hospital emergency departments (ED), the Department of Public Health (DPH) is issuing this guidance to acute care hospitals. Hospitals are reminded to review, test and update as necessary all applicable emergency management/disaster plans and protocols. To protect the essential functions of the ED to assess, stabilize and care for the acutely ill or injured, such protocols should include a plan to reduce or eliminate the need for boarding patients in the ED, and to triage stable flu patients to alternate space on the hospital premises for evaluation and treatment when volume necessitates.

Hospitals also should establish, test and update as necessary plans and mechanisms for ongoing communication with patients, health care providers, and state and local agencies to promote and increase situational awareness of ILI in Massachusetts and elsewhere. Hospitals also should consider establishing a "Flu Hotline" to help provide patient advice/direction and to avoid unnecessary visits to the ED.

(1) Reducing or Eliminating the Need for Boarding of Patients in the Hospital Emergency Department

Hospitals in the Commonwealth are expected to test and be prepared at all times to activate Code Help policies. A hospital's full census and emergency management/disaster plans and protocols should ensure timely discharge of inpatients, expedite the movement of admitted ED patients to alternative holding areas or hallway beds as necessary with appropriate coordination, and provide for the appropriate transfer of patients to other facilities and rescheduling of elective admissions and surgeries as the situation requires. The Code Help policy is intended to optimize patient flow throughout the hospital by redeploying staff and resources with the goal of moving all admitted patients out of the ED within thirty minutes.

If implementation of the Code Help policy does not eliminate the burden of admitted patients in the ED in a timely fashion, or if the severity of the initial situation warrants it, then the hospital must consider implementation of any necessary elements of the emergency management/disaster plans and protocols to create additional inpatient capacity. No request for Centers for Medicare and Medicaid Services waivers would be considered until after the above referenced measures have been implemented.

Please note, DPH surveyors may assess boarding of admitted patients in the emergency department and review Code Help plans as part of the hospital survey and complaint review process.

Over the past several years, DPH has issued letters to hospital administrators regarding best practices for helping to reduce patient boarding in the ED and to maximize patient flow throughout the hospital. Although earlier correspondence refers to ambulance diversion, which is no longer allowed in Massachusetts except under "code black", i.e., when a hospital is closed due to an internal emergency, there are many useful resources included in these documents. These letters can be accessed via the Division of Health Care Quality's web pages on www.mass.gov/dph/dhcq; under the section for Related Links, click on "Code Help Plans for Hospitals."

(2) Authorization and Guidelines for Use of Alternate Space for Treatment of Ambulatory Patients Presenting with Influenza-like Illness (ILI)

DPH has received requests from hospitals to use space not currently licensed for ED or outpatient use, on the hospital campus, to temporarily establish influenza-screening areas for the screening, evaluation and treatment of stable ambulatory patients in the event of a surge in patients presenting to the ED or outpatient clinics. As part of the hospital's emergency management/disaster planning, DPH encourages each hospital to identify appropriate, alternate space to accommodate a surge in patients requiring influenza screening. Hospitals may identify and use existing non-patient care space, or other outpatient or inpatient care space, for flu screening, evaluation and treatment, consistent with this letter and enclosed Guidelines.

DPH has developed the attached *Guidelines for Use Of Alternate Space for Treatment of Ambulatory Patients Presenting with ILI*, hereinafter referred to as Guidelines (Attachment A) for use when a hospital has available space located on the hospital's campus that can be used for screening, evaluating and treating ambulatory patients who are presenting to the hospital with influenza-like illness (ILI) during the 2013 influenza season (January through June 30,

2013). The Guidelines outline the conditions for temporary use of alternate space at the hospital to screen, evaluate and provide treatment to stable, ambulatory patients with influenza-like illness in the event such a need arises at your hospital. Each hospital should use the Guidelines to identify appropriate alternate screening space(s), if available. Through this letter, DPH authorizes use of alternate space(s) selected by the hospital for screening of influenza patients during the 2013 influenza season), provided that the hospital complies with the Guidelines. DPH is not requiring hospitals to submit a copy of their written plan for use of alternate space at this time. A hospital must, however, provide DPH with written documentation of its compliance with these Guidelines if requested by DPH.

Also, please refer to the attached Fact Sheet published by the Centers for Medicare & Medicaid Services (CMS) which provides important information concerning *Emergency Medical Treatment and Labor Act (EMTALA) & Surges in Demand for Emergency Department (ED) Services During a Pandemic*. The fact sheet is available on the CMS website at <http://www.cms.hhs.gov/SurveyCertificationGenInfo/> click "policy and memos to states" S&C-09-52 issued 8/14/09.

Attachment A: Guidelines for Use of Alternate Space for Treatment of Ambulatory Patients Presenting with Influenza-like Illness (ILI)

ATTACHMENT A – Updated January 11, 2013

Guidelines for Use of Alternate Space for Treatment of Ambulatory Patients Presenting with Influenza-like Illness (ILI)

(Effective, unless rescinded, amended or superseded)

Purpose: Alternate use space is provided as an option to more efficiently evaluate and provide care to ambulatory individuals who present to the hospital ED or outpatient clinic(s) with ILI. **The alternate space is limited to use for influenza screening during the 2013 influenza season. The hospital must ensure that the following conditions are met:**

The hospital must have written guidelines that address the following:

- 1) Criteria to activate use of identified alternate-use space and to de-activate use of the space
- 2) A staffing plan with staff qualifications, including appropriate orientation and training
- 3) Protocols defining patient selection criteria for screening in alternate space: inclusions/exclusions
- 4) Patient flow systems addressing triage, screening exam, treatment, transport to ED/inpatient, etc.
- 5) Policy for security of patients, facilities, supplies, pharmaceuticals / crowd management

The physical space must conform to the following requirements:

- 6) Limited to on-campus locations only
- 7) Limited to existing non-patient care space, or inpatient or outpatient care space
- 8) Limited to use by ambulatory care patients only
- 9) Space cannot be accessed through inpatient units
- 10) Minimum four-foot aisles maintained between patient exam chairs
- 11) Convenient access to waiting areas and toilet facilities
- 12) Immediate access to hand wash sinks or other forms of hand hygiene
- 13) Reasonably sized workspace with privacy considerations for patient screening examination and treatment
- 14) Provision for environmental cleaning, sanitization and appropriate decontamination
- 15) Access to supplies, including emergency supplies, as necessary
- 16) Space, cabinets or carts for storage of supplies and specimens
- 17) Provision for medical recordkeeping, including measures to ensure patient confidentiality

- 18) Conveniently accessible communication systems
- 19) Considerations for fire safety e.g., egress not obstructed, staff trained in fire evacuation plan
- 20) Signage to direct patients to the alternate use space

If you have any questions regarding these guidelines, please contact:
