Overview

The Commonwealth has a long history of trying to combat addiction. We began to address the harm of opioids in 2004, when 456 individuals died of an opioid overdose. Since 2004, more than 6,600 members of our community have died, and behind those deaths are thousands of hospital stays, emergency department visits, and unquantifiable human suffering.

We are in the midst of an epidemic. Our response requires a strong partnership between the medical community, law enforcement, the judiciary, insurers, providers, health and human services agencies, elected officials, and the public. Our law enforcement agencies are a critical part of the opioid solution; however, we cannot arrest our way out of this epidemic. These recommendations aim to ensure access to pain medication for individuals with chronic pain while reducing opportunities for individuals to access and use opioids for nonmedical purposes.

The Commonwealth must build upon and accelerate the prevention, intervention, treatment, and recovery support strategies recommended by prior task forces and commissions and acted upon by the legislature. Equally important, we must implement BOLD NEW STRATEGIES. To that end, the working group developed more than 65 actionable recommendations for the administration to consider for implementation.

The challenge is great. Addiction is a complex disease. There are no easy or quick solutions, nothing short of a comprehensive approach to this opioid epidemic will turn the tide of overdose deaths and reduce the harms that opioids are inflicting upon individuals, families and our communities.
Objective
Produce actionable recommendations to address the opioid epidemic in the Commonwealth

Goals
• Reduce the magnitude and severity of harm related to opioid misuse and addiction
• Decrease opioid overdose deaths in the Commonwealth

To Meet the Objective the Working Group
• Hosted 4 listening sessions in Boston, Worcester, Greenfield, and Plymouth
• Held 11 in person meetings
• Received and examined documents and recommendations from more than 150 organizations
• Heard from more than 1,100 individuals from across the Commonwealth
• Reviewed academic research, government reports, and reports of previous task forces and commissions
Opioid-Related Deaths, Unintentional/Undetermined
Massachusetts: 2000-2014

MA Department of Public Health Data Brief, April 2015
Unintentional Opioid-related Overdose Deaths vs. Motor Vehicle-related Injury Deaths
Massachusetts 2000-2013

MA Department of Public Health Data, February 2015
1. **Create new pathways to treatment**
   Too many individuals seeking treatment utilize acute treatment services (ATS) as their entry point, even when a less acute level of treatment may be appropriate. By creating new entry points to treatment and directing individuals to the appropriate level of care, capacity will be managed more efficiently and the Commonwealth will be better able to meet the demand for treatment.

2. **Increase access to medication-assisted treatment**
   Medication-assisted treatment for opioid use disorder (e.g. methadone, buprenorphine, naltrexone) has been shown to reduce illicit opioid use, criminal activity, and opioid overdose death. Increasing capacity for long-term outpatient treatment using medications as well as incorporating their use into the correctional health system, can be a life-saving intervention.

3. **Utilize data to identify hot spots and deploy appropriate resources**
   By the time DPH receives overdose death data from the medical examiner, the data is stale. The Commonwealth should partner with law enforcement and emergency medical services to obtain up-to-date overdose data, which can be used to identify hot spots in a timely manner and allocate resources accordingly.

4. **Acknowledge addiction as a chronic medical condition**
   Primary care practitioners must screen for and treat addiction in the same way they screen for and treat diabetes or high blood pressure. This will expedite the process for timely interventions and referrals to treatment.

5. **Reduce the stigma of substance use disorders**
   The stigma associated with a substance use disorder (SUD) is a barrier to individuals seeking help and contributes to: the poor mental and physical health of individuals with a SUD; non-completion of substance use treatment; higher rates of recidivism; delayed recovery and reintegration processes; and increased involvement in risky behavior.

**The Working Group’s KEY STRATEGIES:**
The Working Group’s KEY STRATEGIES:

6. **Support substance use prevention education in schools**
   Early use of drugs increases a youth’s chances of developing addiction. Investing in the prevention of youth’s first use is critical to reducing opioid overdose deaths and rates of addiction.

7. **Require all practitioners to receive training about addiction and safe prescribing practices**
   Opioids are medications with significant risks; however, safer opioid prescribing practices can be accomplished through education.

8. **Improve the prescription monitoring program**
   The Commonwealth’s prescription monitoring program (PMP) is an essential tool to identify sources of prescription drug diversion. By improving the ease of use of the PMP and enhancing its capabilities, it will no longer be an underutilized resource.

9. **Require manufacturers and pharmacies to dispose of unused prescription medication**
   Reducing access to opioids that are no longer needed for a medical purpose will reduce opportunities for misuse.

10. **Acknowledge that punishment is not the appropriate response to a substance use disorder**
    Arrest and incarceration is not the solution to a substance use disorder. When substance use is an underlying factor for criminal behavior, the use of specialty drug courts are effective in reducing crime, saving money, and promoting retention in drug treatment. It is important that treatment occur in a clinical environment, not a correctional setting, especially for patients committed civilly under section 35 of chapter 123 of the General Laws.

11. **Increase distribution of Naloxone to prevent overdose deaths**
    Naloxone saves lives. It should be widely distributed to individuals who use opioids as well as individuals who are likely to witness an overdose.

12. **Eliminate insurance barriers to treatment**
    Removing fail first requirements and certain prior authorization practices will improve access to treatment. By enforcing parity laws, the Commonwealth can ensure individuals have access to behavioral health services.
In order to reduce opioid deaths, the Commonwealth must use all the tools in the toolkit.

**Prevention**
- School based prevention education
- Parent education about signs of addiction
- Community coalition initiatives
- Local drug-free school initiatives
- Prescriber and patient education
- Drug take-back programs
- Public awareness

**Intervention**
- Evidence-based screening for risk behaviors and appropriate intervention methods
- Prescription monitoring program
- Civil commitment
- Utilization of data to identify hot spots
- Access to naloxone
- Recovery coaches in Emergency Departments

**Treatment**
- Continuum of treatment from acute inpatient services to outpatient services
- Civil commitment: court-ordered SUD treatment
- Medication assisted treatment
- Outpatient counseling
- Emergency services
- Central database of treatment resources

**Recovery Support**
- Residential rehabilitation programs
- Alcohol and drug free housing
- Family and peer support
- Recovery high schools
- Resource navigators and case management
FINDINGS AND RECOMMENDATIONS

**Recommendations appearing in red are included in the Governor’s action plan**
The Working Group’s Findings:

1. Individuals in crisis cannot access the right level of treatment at the right time
2. Youth drug use and addiction trends must be addressed through prevention education
3. Pregnant women and mothers with a substance use disorder need specialized care
4. Opioid medications must be safely managed by prescribers, pharmacists, and patients
5. The stigma associated with a substance use disorder is a barrier to treatment and recovery
6. Lack of transparency and accountability hinder our ability to respond to the opioid crisis
7. Courts and Jails should not be the primary mode of accessing long-term treatment
8. Recovery resources are insufficient and difficult to access
9. Increasing access to Naloxone will save lives
10. Insurance barriers prevent individuals from receiving treatment
11. The opioid crisis is a national issue that requires both state and federal solutions
The Commonwealth must realign the treatment system to reflect the nature of opioid use disorder as a chronic disease to allow for multiple entry points to treatment.

Finding 1: Individuals in crisis cannot access the right level of treatment at the right time.
Focusing on patient care can increase access without having to add beds

In 2014, **4,524 individuals** utilized ATS services 3 or more times

Two individuals utilized ATS services **23 times**

In 2014, if these individuals had received ongoing treatment, at least **16,000 additional** individuals could have received ATS services

**Finding 1: Individuals in crisis cannot access the right level of treatment at the right time**
**Number of Adult Treatment Beds & Licensed Programs for a Substance Use Disorder**

Bed & Program data from May, 2015
Recommendations Related to Treatment

• Realign Treatment System to Reflect Nature of Opioid Use Disorder as a Chronic Disease with Periods of Acute Needs and Periods of Stability
  • Increase points of entry to treatment, eliminating the need for individuals to access other levels of care only through acute treatment services (ATS) and clinical stabilization services (CSS)
  • Establish and promote a longitudinally based treatment system and continuum of care

• Increase Treatment Access by Matching Demand and Capacity
  • Develop a real-time, statewide database of available treatment services, making information available via phone and the internet
  • Increase the number of post-ATS/CSS beds (transitional support service, residential recovery homes)
  • Fund patient navigators and case managers to ensure a continuum of care
  • Pilot a program that provides patients with access to an emergent or urgent addiction assessment by a trained clinician and provides direct referral to the appropriate level of care
  • Establish revised rates for recovery homes, effective July 1, 2015

Finding 1: Individuals in crisis cannot access the right level of treatment at the right time
Recommendations Related to Treatment

• Increase Access to Evidence-Based Medication-Assisted Treatment
  • Increase the number of office-based opioid treatment programs and the number of practitioners prescribing buprenorphine and naltrexone
  • Enforce and strengthen the requirement that all licensed addiction treatment programs accept patients on an opioid agonist therapy

• Promote Integration of Mental Health, Primary Care, and Opioid Treatment
  • Create a consistent public behavioral health policy by conducting a full review of all DPH and DMH licensing regulations for outpatient primary care clinics, outpatient mental health clinics, and BSAS programs removing all access barriers
  • Explore state mechanisms to establish opioid treatment programs as Health Homes
  • Conduct a review of the license renewal process for programs accredited by The Joint Commission or Commission on Accreditation of Rehabilitation Facilities (CARF) and evaluate whether Massachusetts should implement a “deemed status” for BSAS license renewals
  • Permit clinicians to hold an individual with a substance use disorder involuntarily in order to conduct an assessment of whether release poses a likelihood of serious harm

Finding 1: Individuals in crisis cannot access the right level of treatment at the right time
Addiction is a Developmental Disease

Studies demonstrate that youth begin to use alcohol and drugs as early as 10 years old.

Finding 2: Youth drug use and addiction trends must be addressed through prevention education.

• Universal evidence-based preventive interventions can effectively and efficiently reduce nonmedical prescription opioid use.

• According to a 2012 National Survey, parents generally do not discuss the dangers of prescription pain relievers with their teens.

• 74% of individuals with a substance use disorder began substance use at the age of 17 or younger; 10.2% initiated use at the age of 11 or younger.

• 40% of kids who begin drinking at age 15 will become alcoholics, while only 7% of those who begin drinking at age 21 become alcoholics.

• Adolescent males who participate in sports may have greater access to opioid medication, which puts them at greater risk to misuse these controlled substances.

Finding 2: Youth drug use and addiction trends must be addressed through prevention education
Recommendations Related to Youth & Parent Education & Interventions

- Support the implementation of substance use prevention curricula in schools. School districts should have the autonomy to choose the evidence-based curricula and the grade level that it is implemented in their district. Programs must be proven to reduce nonmedical opioid use. Examples of programs include: LifeSkills and All Stars
- Integrate information about the risks of opioid use and misuse into mandatory athletic meetings and trainings for parents, students, and faculty
- Increase the use of screenings in schools to identify at-risk youth for behavioral health issues
- Develop targeted educational materials for school personnel to provide to parents about closely monitoring opioid use if their child is prescribed opioids after an injury, as well as, signs and symptoms of drug and alcohol use
- Partner with state universities that have strong education programs to develop substance use prevention curricula for school districts throughout the Commonwealth
- Require state universities that educate teachers to integrate screening and intervention techniques as well as substance use prevention education into the curriculum

Finding 2: Youth drug use and addiction trends must be addressed through prevention education
The Department of Children and Families (DCF) received 2,376 reports of a substance exposed newborn (SEN) between March, 2014 and March, 2015

A SEN designation is given when 1 or more of the following occurs:
- A positive toxic screen on the newborn;
- A positive toxic screen on the mother during her pregnancy or at delivery;
- A newborn has been diagnosed with Neonatal Abstinence Syndrome (NAS);
- Evidence of withdrawal symptoms from alcohol or drugs on the mother or the baby;
- A newborn shows signs of Fetal Alcohol Syndrome (FAS);
- A newborn tests positive for methadone, buprenorphine (Subutex), or buprenorphine with naloxone (Suboxone); or
- A self report by the mother or a verifiable report from a treatment provider that during pregnancy the mother used illicit drugs.

Finding 3: Pregnant women and mothers with a substance use disorder need specialized care
Recommendations Related to Neonatal Abstinence Syndrome, Prenatal Care & Neonatal Care

- Outreach to prenatal and postpartum providers to increase training about: screening, intervention, and care for women with a substance use disorder
- Promote early identification and proper treatment, raise awareness of NAS within the public health and medical communities
- Review the costs and benefits of mandating testing for in utero exposure to alcohol and drugs at every birth
- Ensure adequate capacity for pregnant women in the treatment system
- Develop and institute a training program focused on NAS and addiction for Department of Children and Families staff
- Work with health care providers to ensure all infants with NAS are referred to early intervention by the time of hospital discharge
- Partner with early intervention (EI) leadership and developmental experts to study the value of increasing automatic EI eligibility for infants with NAS from one year to two years

Finding 3: Pregnant women and mothers with a substance use disorder need specialized care
Finding 4: Opioid medications must be safely managed by prescribers, pharmacists, and patients
Finding 4: Opioid medications must be safely managed by prescribers, pharmacists, and patients

**SURVEY: REASON FOR PRESCRIPTION PAINKILLER MISUSE**

<table>
<thead>
<tr>

Enrollment of Providers and Delegates in the MA Online PMP (March, 2015)

- 25% of enrolled prescribers have logged into the PMP and searched for a patient at least 1 time in the past year
- Over 50% of enrolled prescribers have never logged into the system
- 58% of prescribers enrolled in the PMP issued more than 10 Schedule II-V prescriptions during 2014

<table>

* This number represents an estimate of all registered pharmacists that are licensed in MA. Many licensed pharmacists do not work in retail pharmacy settings and are not dispensing controlled substances; therefore, the percentage enrolled for this provider category will be biased on the low side.

Finding 4: Opioid medications must be safely managed by prescribers, pharmacists, and patients
In a 2015 survey, individuals who, in the past 2 years, **HAD** taken a strong prescription painkiller, such as Percocet, OxyContin, or Vicodin that was prescribed by a doctor for more than a few days, were asked the following question:

“Before or while you were taking these strong prescription painkillers, did you and your doctor talk about the risk of prescription painkiller addiction, or haven’t you talked about that?”

Only 36% of Massachusetts residents said “yes”, compared to 61% nationally.
Recommendations Related to Prescriber & Safe Disposal Practices

- Mandate pain management, safe prescribing training, and addiction training for all prescribers as a condition of licensure (physician assistants, nurses, physicians, dentists, oral surgeons, and veterinarians)
- Allow partial refills across all payers with a one-time co-payment
- Eliminate prescription refills by mail for schedule II medications
- Improve the Prescription Monitoring Program (PMP):
  - Increase utilization by improving ease of use and expanding abuse alerts from the PMP to prescribers
  - Ensure data compatibility of the PMP with other states & interface the PMP with electronic health records
  - Enforce mandatory use of the PMP
  - Require PMP data to be submitted within 24 hours by pharmacies
  - Improve data analytics and educate prescribers about how to utilize the information
- Implement electronic prescribing for opioids
- Partner with the medical and provider community to improve and increase educational offerings for prescribers and patients to promote safe prescribing
- Promote awareness and support for alternate pain therapies
- Appoint individuals with expertise in addiction to the medical profession licensing boards
- Develop universal distribution of easy to read materials at pharmacies on the safe use of medications
- Expand and promote drug take-back days and permanent drug take-back locations, financed by pharmacies and manufacturers
- Require practitioners, including dentists, to educate patients on the risks and side effects associated with opioids and document such discussions at the point of prescribing
- Increase screening for substance use at all points of contact in the medical system
- Appoint members to the drug formulary commission established under Chapter 258 of the Acts of 2014

Finding 4: Opioid medications must be safely managed by prescribers, pharmacists, and patients
The Harms of Stigma Associated with a Substance Use Disorder:

- Stigma is a barrier to individuals seeking help\(^1\)
- Stigma contributes to the poor mental and physical health of individuals with a SUD\(^2\)
- Stigma contributes to non-completion of substance use treatment\(^2\)
- Stigma delays recovery and reintegration processes\(^2\)
- Stigma increases involvement in risky behavior (e.g. needle sharing)\(^2\)

Recommendations Related to Reframing Addiction as a Disease

- Create a public awareness campaign, with messaging that targets various ages, focused on:
  - Reframing addiction as a medical disease
  - Promoting medication safety practices
- Promote the Good Samaritan law
- Reduce stigma among medical and treatment professionals\(^1\)

---

Finding 5: The stigma associated with a substance use disorder is a barrier to treatment and recovery
Recommendations Related to Enhancing the Utilization of Data to Improve Transparency

• Require and support universal and timely reporting of overdose deaths, through a partnership between the Department of Public Health, the Attorney General’s Office, the Massachusetts State Police, the District Attorneys, local police departments, emergency medical services, hospitals, and others
• Make EMS overdose data available
• Utilize overdose reports to identify geographical hot spots for targeted intervention and to alert law enforcement, public health entities, community coalitions, and the public
• Create a unified EOHHS privacy policy and implement a process for sharing confidential data

Recommendations Related to Government & Provider Accountability

• Establish a single point of accountability for the Commonwealth, Director of Addiction and Recovery Policy
• Enhance provider accountability by requiring treatment programs at all levels (inpatient and outpatient) to report on outcomes
• Incentivize and support providers to develop and test innovative treatment approaches
• Create provider accountability for the successful transition from one level of care to the next and incentivize providers to reduce re-admissions; the current "system" inadvertently "rewards" providers for repeat detoxes and rehabs
• Require the Department of Public Health to advance standards of care by establishing industry benchmarks

Finding 6: Lack of transparency and accountability hinder our ability to respond to the opioid crisis
Recommendations Related to the Courts

• Increase drug and specialty court capacity
• Increase access to beds for patients who are civilly committed under section 35 of chapter 123 of the General Laws and provide a roster of currently available beds to judges for section 35 commitments
• Review and revise discharge policies for section 35 patients; facilities must be required to follow the law and issue a written determination that release will not result in a likelihood of serious harm when individuals are discharged from the facility
• Improve the continuum of care for patients committed under section 35
• Ensure notification to the Court when a section 35 patient escapes from treatment

Recommendations Related to Policing & Correctional Institutions

• Transfer responsibility for civil commitments from the Department of Corrections to the Executive Office of Health and Human Services
• Suspend, rather than terminate, MassHealth coverage during incarceration
• Partner correctional facilities with community health centers to ensure individuals can access treatment upon release
• Analyze treatment spending in correctional facilities
  • Inmates should be able to continue medication-assisted treatment while incarcerated
  • Inmates should be able to begin treatment while incarcerated and be connected to treatment upon release
• Encourage and support alternatives to arrest, making police a partner in obtaining treatment for individuals
• Bulk purchase opioid agonist and naltrexone therapies for county corrections

Finding 7: Courts and Jails should not be the primary mode of accessing long-term treatment
Recommendations Related to Recovery & Support

- Leverage and increase support for community coalitions to address the opioid crisis
  - Create an online repository of resources and best practices for community coalitions
  - Improve statewide coordination and information sharing among coalitions
- Expand peer and family support organizations such as Learn to Cope
- Pilot recovery coaches in emergency rooms and hot spots
- Implement a process to certify alcohol and drug free housing to bring accountability and credibility to this recovery support system
- Partner with businesses to remove employment barriers that recovering individuals experience, specifically review regulations related to CORI checks
- Incentivize employers to hire individuals in early recovery
- To improve outcomes for recovery, explore the benefits and costs associated with issuing certificates of recovery

Finding 8: Recovery resources are insufficient and difficult to access
Recommendations Related to Naloxone

- Investigate the feasibility of having Naloxone in public spaces
- Improve affordability of Naloxone
  - Through bulk purchasing agreements
  - By eliminating all copayment requirements
- Encourage Naloxone to be co-prescribed with opioids

<table>
<thead>
<tr>

Finding 9: Increasing access to Naloxone will save lives
Recommendations Related to Insurance

- Require the Division of Insurance to implement guidance for commercial insurers about the implementation of chapter 258 of the acts of 2014 prior to October 1, 2015
- Eliminate insurance barriers that impede integration of addiction and mental health care into the primary care setting
- Require consistent coverage and prior authorization practices and policies throughout all MassHealth programs
- Bring meaning to federal and state behavioral health parity laws through enforcement actions to remove inappropriate barriers to treatment
- Encourage insurers to support non-opioid pain therapies
- Prepare a public report on what non-pharmacological treatments for pain are covered by all private and public insurers
- Encourage insurers to support recovery coaches for individuals with a substance use disorder
- Encourage insurers to support new pathways to treatment

**Finding 10:** Insurance barriers prevent individuals from receiving treatment

Data provided by the Center for Health Information and Analysis, the Department of Public Health, and MassHealth
Recommendations Related to Federal-State Partnerships

- Partner with federal leaders to recommend that the American College of Graduate Medical Education adopt requirements for pain management and substance use disorder education for all medical and residency programs (i.e. surgical, pediatrics, internal medicine, family medicine, obstetrics, and gynecology)
- Partner with federal leaders to recommend that the Commission on Dental Accreditation adopt requirements for education on safe opioid prescribing practices for all dental programs
- Partner with federal leaders to recommend that the American Veterinary Medical Association adopt requirements for education on safe opioid prescribing practices for all veterinary programs
- Partner with federal leaders to increase support for substance use prevention, intervention, treatment, and recovery efforts uniquely tailored for our Veterans

Finding 11: The opioid crisis is a national issue that requires both state and federal solutions
Recommendations Related to Federal-State Partnerships

- Request the Drug Enforcement Agency (DEA) to permit medical residents to prescribe buprenorphine under an institutional DEA registration number, thus allowing residents to learn how to manage patients with an opioid addiction
- Implement nationwide standards for pharmaceutical take back programs
  - Require manufacturers and pharmacies nationwide to finance the disposal of unused prescription medication
- Change the laws and regulations related to prescribing buprenorphine
  - Increase the cap - the number of patients a physician can treat - or remove it entirely
  - Permit nurse practitioners and physician assistants to prescribe buprenorphine
- Facilitate the interoperability of prescription monitoring programs nationwide
- Review 42 CFR Part II to ensure that it facilitates integrated care and the use of electronic health records and does not exacerbate the stigma associated with a substance use disorder
- Request that the Pain Management Question from the HCAHPS not be linked to hospital reimbursement

Finding 11: The opioid crisis is a national issue that requires both state and federal solutions
## Summary of Short-Term Action Items (6 months to 1 year)

### Prevention
- Increase educational offerings for prescribers and patients to promote safe prescriber practices
- Develop targeted educational materials for schools
- Appoint members to the drug formulary commission
- Integrate information about the risks of opioid use and misuse into school athletic programs
- Conduct a public awareness campaign

### Intervention
- Improve the PMP
- Outreach to prenatal and postpartum providers to increase screening for women with a substance use disorder
- Improve reporting of overdose death data
- Enhance data transparency, including EMS data
- Encourage naloxone to be co-prescribed with opioids
- Amend civil commitment process
- Identify hot spots for targeted intervention, using EMS, hospital, and police data
- Promote the Good Samaritan law
- Consider mandating testing for in utero exposure to alcohol and drugs at every birth
- Encourage and support alternatives to arrest
- Expand availability of Naloxone

### Treatment
- Develop a central statewide database of available treatment services
- Transfer section 35 civil commitment responsibility from DOC to EOHHS
- Increase the number of office based opioid treatment programs
- Require DOI to issue bulletins on chapter 258 of the Acts of 2014 prior to Oct. 2015
- Pilot recovery coaches in emergency rooms and hot spots
- Bulk purchase opioid agonist and naltrexone therapies for correctional facilities
- Add 100 new ATS/CSS beds
- Open Recovery High School in Worcester
- Review capacity in the treatment system for women/families
- Analyze treatment spending in correctional facilities
- Increase the number of stepdown beds and services

### Recovery
- Promulgate chapter 257 rates for recovery homes effective July 2015
- Establish a single point of accountability for addiction and recovery policy at EOHHS
- Suspend rather than terminate MassHealth coverage during incarceration
- Certify alcohol and drug free housing
- Enforce the requirement that BSAS treatment programs accept patients on an opioid agonist therapy
- Strengthen connections between law enforcement and community providers for individuals upon release
- Explore issuing certificates of recovery
- Review and revise discharge/court notification policies for section 35
Summary of Mid-Term Action Items (1 year to 3 years)

**Prevention**
- Support substance use prevention curricula in schools
- Mandate pain management, safe prescribing and addiction training for all prescribers
- Partner with federal government regarding graduate medical education
- Require manufacturers and pharmacies to dispose of unused prescription medication
- Require prescribers to discuss opioid side effects at point of prescription
- Allow partial refills across all payers
- Eliminate prescription refills by mail for schedule II medications
- Amend the curriculum for teachers as state universities to include training on screening and intervention techniques
- Have state universities develop substance use prevention curricula for schools

**Intervention**
- Improve the PMP to ensure data compatibility with other states
- Develop training on neonatal abstinence syndrome and addiction for DCF staff
- Improve affordability of Naloxone
- Increase access to beds for section 35 patients
- Implement electronic prescribing for opioids
- Increase screening for substance use at all points of contact in the medical system
- Increase the use of screenings in schools to identify at-risk youth for behavioral health issues

**Treatment**
- Create a consistent public behavioral health policy through licensing reforms
- Pilot providing patients with access to an emergent/urgent addiction assessment by a trained clinician and direct referral to the appropriate level of care
- Increase points of entry to treatment
- Ensure section 35 patients receive a continuum of care
- Enhance provider accountability by requiring treatment programs to report on outcomes
- Reform purchasing of substance use disorder treatment services
- Require DPH to advance standards of care by establishing industry benchmarks
- Add new non-ATS/CSS treatment beds

**Recovery**
- Fund patient navigators and case managers
- Leverage community coalitions to address opioids
- Ensure all infants with NAS are referred to early intervention by time of hospital discharge
- Increase drug and specialty court capacity
- Expand peer/family support
- Partner with businesses to remove employment barriers that recovering individuals experience
Summary of Long-Term Action Items (3+ years)
