Barnstable County Fires in 2008

2008 Fires

Barnstable County Fires in 2008

1,081 Total Fires — 481 Structures, 124 Vehicles & 476 Other Fires

Barnstable County ranked ninth out of the 14 Massachusetts counties in total reported fires. Barnstable County fire departments reported 1,081 fires to the Massachusetts Fire Incident Reporting System (MFIRS) in 2008. The 481 structure fires, 124 motor vehicle fires, 298 brush, tree, or lawn fires, 90 outside rubbish fires, 48 special outside fires, two cultivated crop or vegetable fires, and 38 unclassified fires caused six civilian deaths, 40 civilian injuries, 18 fire service injuries and an estimated dollar loss of \$10.3 million. Barnstable County's fires accounted for 4% of the 30,136 Massachusetts fires reported in 2008.

All 19 of Barnstable County's fire departments either reported incidents to the Massachusetts Fire Incident Reporting System (MFIRS) or certified that they had no reportable fires in 2008.

Structure & Motor Vehicle Fires Up

The total number of reported fire incidents increased by 21 from the 1,060 reported in 2007. Reported structure fires increased by 21 from the 460 reported during the previous year. Motor vehicle fires increased by five from the 119 reported during 2007. Outside and other fires decreased by five from the 481 reported the year before.

BARNSTABLE COUNTY FIRES FROM 2004 TO 2008

Year	Total Fires	Structure Fires	Vehicle Fires	Other Fires	Total Arsons	Structure Arsons	Vehicle Arsons	Other Arsons
2004	1,151	481	187	483	92	22	12	58
2005	1,173	539	144	490	57	16	4	37
2006	1,110	460	131	519	67	14	8	45
2007	1,060	460	119	481	83	16	7	60
2008	1,081	481	124	476	93	12	7	74

Fire and Fire Death Rates

Barnstable County had 4.9 fires per 1,000 population. That figure ranks Barnstable County fifth in the state and just above the state rate of 4.8 fires per 1,000 population. Barnstable County also had 0.27 fire deaths per 10,000 populations ranking it first among Massachusetts counties and above the state rate of 0.08 fire deaths per 10,000 population.

5 Barnstable County Fatal Fires Killed 6 Residents in 2008

- On January 20, 2008, at 11:05 p.m. the Eastham Fire Department was dispatched to a fatal smoking fire in a 2-family home. The fire began in the living room in an upholstered sofa. The victim, a 49-year old man, fell asleep while smoking but did wake up and attempted to escape. He was overcome by the heat and smoke during his escape. No one else was injured at this fire. It was undetermined if smoke detectors were present. Sprinklers were not present.

- On April 8, 2008, at 12:38 a.m., the Yarmouth Fire Department was called to a fatal smoking fire in a single-family home. A cigarette ignited some trash in the kitchen. The victim, a 47-year old woman, was trapped in a rear bedroom by the fire. One firefighter was injured fighting this fire. Smoke detectors were present but failed to operate because of a missing battery. There were no sprinklers. Damages from this fire were estimated to be \$300,000.
- On May 17, 2008, at 1:38 p.m., the Falmouth Fire Department was called to a fatal fire of undetermined cause in a single-family home undergoing renovations. The fire started in the attic. The victim, a 48-year old male worker, was spraying blown insulation in the attic. It is believed that when the fire started he was overcome by the smoke and heat of the fire. His body was found towards the back of the building. Two possible scenarios of the cause of the fire are that the victim was a known smoker and could have tried to smoke a cigarette in the attic somehow igniting the insulation; or that the blown-in insulation could have self-combusted. Two firefighters were injured at this fire. Smoke detectors and sprinklers were not present. Damages from this fire were estimated to be \$430,000.
- On May 23, 2008 at 8:53 p.m., the Harwich Fire Department was called to investigate an extinguished fire. The police had been called earlier to do a welfare check at a single-family home. Upon arrival they found the remnants of a smoking fire and the victim. The fire started in a first floor living room when a cigarette that fell on an upholstered sofa. The fire occurred approximately six days before it was discovered and was limited to the victim and the sofa. The victim, a 71-year old woman, was possibly impaired by alcohol and drugs. She died from burns and smoke inhalation. No one else was injured at this fire. Detectors were present but it was undetermined if they operated. Sprinklers were not present. Damages from the fire were estimated to be \$85,000.
- On Christmas Eve, December 24, 2008, at 9:34 p.m., the Bourne Fire Department was called to a fatal electrical fire in a single-family home. The fire was caused by an electrical malfunction in a portable fan used to help distribute the heat from a nearby woodstove throughout the room. The victims, a 77-year old man and his 73-year old wife, were transported to a local hospital; but both succumbed to their injuries. There were no other injuries at this fire. Smoke detectors were present but failed to operate because of a missing battery. The building was not sprinklered, and damages were estimated to be \$215,000.

Chatham Has Barnstable County's Largest Loss Fire

- On April 22, 2008, at 11:15 p.m., the Chatham Fire Department responded to a heating fire in a single-family room. The fire originated in the wall near the fireplace's firebox from radiant heat due to the vents being covered. One firefighter was injured battling this fire. Detectors were present but failed to operate because the fire began in the wall and extended to the attic, areas not protected by detectors. The building was not equipped with sprinklers. Damages were estimated to be \$1,157,958.

STRUCTURE FIRES

Reported Structure Fires Up

The 481 structure fires caused all six civilian deaths, 40 civilian injuries, 18 fire service injuries and an estimated dollar loss of \$9.7 million. These incidents represented 44% of Barnstable County's reported fires in 2008. The average estimated dollar loss per structure fire was \$20,115. The total number of reported structure fires increased by 21, or 5%, from the 460 reported in 2007.

Arson Caused of 2% of Structure Fires

The 12 structure arsons caused an estimated dollar loss of \$185,400. Arson was indicated as the cause of 2% of the structure fires and 2% of Barnstable County's structure fire dollar loss. The 12 structure arsons accounted for 13% of the Barnstable County arson fires reported in 2008. The total number of reported structure arsons dropped by four from 12 in 2007.

42% of Structure Arsons Occurred in Residences

Forty-two percent (42%) of Barnstable County's 12 structure arsons occurred in residential occupancies; 25% occurred in public assembly facilities; 17% occurred in educational facilities; and another 17% happened in unclassified properties.

BUILDING FIRES

There were 459 building fires of different types in Barnstable County in 2008. These 459 building fires accounted for 95.4% of all building fires in Barnstable County.

84% of Barnstable Building Fires Occurred in People's Homes

Three hundred and eighty-six (386), or 84%, of Barnstable County's 459 building fires occurred in residential occupancies. Twenty-two (22) fires took place in public assembly properties, including restaurants and churches. Mercantile and business properties had 17 fires. Educational facilities experienced 10 fires. Hospitals, prisons, and other institutional buildings experienced eight fires. Seven (7) fires took place in storage properties. Two (2) fires occurred in industrial, utility, defense, agricultural or mining facilities. Special properties had five fires. One (1) fire took place in a manufacturing or processing facility. Three (3) fires occurred in unclassified properties in Barnstable County in 2008.

RESIDENTIAL FIRES

Residential Building Fires Are Up

There were 386 reported residential building fires in Barnstable County in 2008. These 386 fires are an increase of 40, or 12%, from the 346 residential building fires reported in 2007.

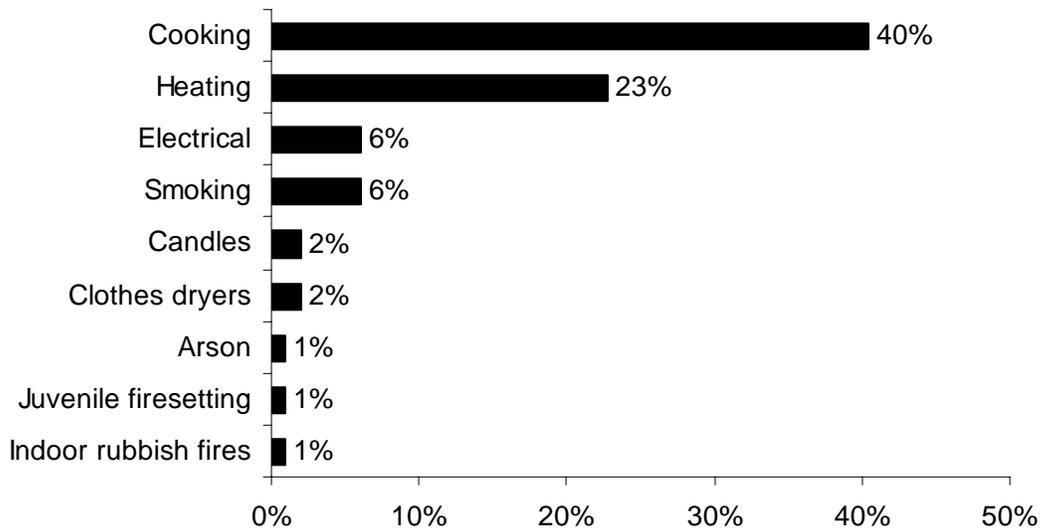

1- & 2-Family Homes Accounted for 78% of Residential Building Fires

The peak fixed property uses for residential building fires were 1- or 2-family homes, accounting for 78% of the building fires in Barnstable County; 12% occurred in apartments; 3% happened in hotels or motels; another 3% happened in dormitories; 2% occurred in rooming houses; and 1% happened in residential board and care facilities. Eight (8), or 2% of the building fires in Barnstable County occurred in unclassified residential buildings.

Unattended Cooking Leading Cause of Residential Fires

The leading cause of residential building fires in Barnstable County was unattended cooking and other unsafe cooking practices, accounting for 40% of the fires. Heating fires accounted for 23% of the fires in people’s homes in 2008; 55% of which involved chimney or flues, and 45% involved a fuel burner or boiler. Electrical problems and smoking each caused 6% of fires in residential buildings. Candles and clothes dryers each caused 2% of these fires. Arsons, juvenile-set fires, and indoor rubbish fires each caused 1% of the fires in residential occupancies in Barnstable County in 2008.

2008 Leading Causes of Fires in Barnstable County Homes

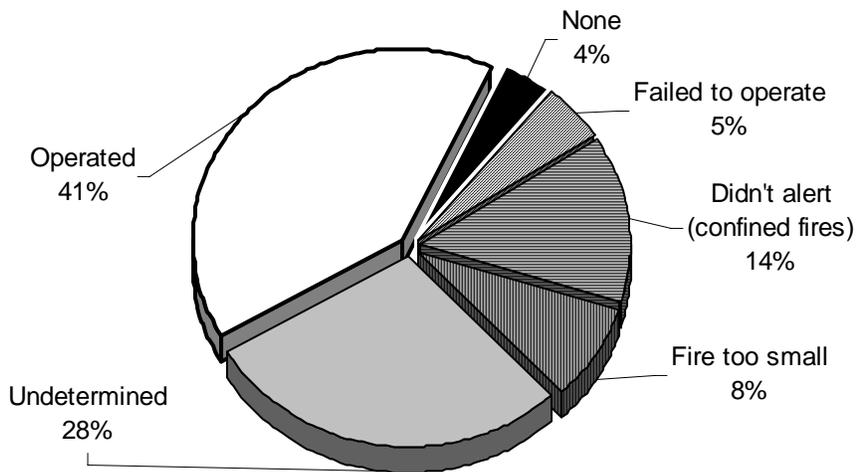

58% of Residential Building Fires Are Confined to Non-Combustible Containers¹

Two hundred and twenty-two (222), or 58%, of all residential building fires were reported as confined to non-combustible containers in 2008. One hundred and forty (140), or 36%, of all residential building fires reported in 2008 were cooking fires contained to a non-combustible container. Forty-five (45) of the reported fires were confined to a chimney accounting for 12% of residential building fires. Thirty-three (33), or 15%, were fires confined to a fuel burner or boiler malfunction. Four (4), or 1%, of these fires were rubbish fires contained to a non-combustible container in Barnstable County in 2008.

Detectors Alerted Occupants in 41% of Fires

Smoke or heat detectors operated and alerted the occupants in 155, or 41%, of the residential building fires. In 14% of these fires², the detectors did not alert the occupants. Detectors were present but did not operate in 5% of these incidents. In 4% of these fires, no detectors were present at all. The fire was too small to trigger the detector in 8% of the residential fires. Smoke detector performance was undetermined in 110 incidents, or 28% of Barnstable County’s residential building fires.

Detector Status in Barnstable County's Residential Structure Fires 2008

58% of Detectors Failed From Missing or Dead Batteries

Of the 21 fires where smoke detectors were present but failed to operate, six, 29%, failed because the batteries were either missing or disconnected. Another six, or 29%,

¹ In MFIRS v5 a fire in a building contained to a non-combustible container (Incident Type = 113-118) does not have to have a Fire Module completed. Therefore the following data fields do not need to be completed: Area of Origin, Detector Status, Item First Ignited, Heat Source, Factors Contributing to Ignition, Cause of Ignition, and Equipment Involved In Ignition. These incidents are not included in the analysis of these fields.

²These represent confined fires where it was reported that the detector did not alert the occupants.

failed because the batteries were dead. Three (3), or 15%, failed because the power was shut-off or disconnected. Another detector, or 5%, failed because it was defective. It was undetermined in five cases, or 24%, why the detectors failed to operate.

VACANT BUILDINGS

7% of Building Fires Occurred in Vacant Buildings

Barnstable County reported 30 fires that occurred in buildings that were vacant, under construction or demolition³. This represented 7% of the total 459 building fires reported to MFIRS in 2008. Sixteen (16) one- or two-family homes, three hotels or motels, two places of worship, a storage facility, a specialty shop, a museum, an apartment building, a livestock or poultry storage facility, an elementary school, a restaurant, a college building, and an unclassified property were reported as vacant building fire incidents.

Three (3), or 10%, of the vacant building fires in Barnstable County in 2008 were determined to be intentionally set. These fires occurred in a single-family home, a place of worship and a restaurant.

JUVENILE-SET FIRES

14 Juvenile-set Fires

There were 10 reported juvenile-set fires in Barnstable County in 2008. The two structure fires, seven brush fires, and one unclassified fire caused one civilian injury and \$210 in estimated damages.

ARSONS

93 Total Arsons⁴ — 12 Structures, 7 Vehicles & 74 Other Arsons

Ninety-three (93), or 9% of Barnstable County's 1,081 fires were considered intentionally set, or, for purposes of this analysis, arson. The 12 structure arsons, seven motor vehicle arsons and 74 outside and other arsons caused one civilian injury and an estimated dollar loss of \$257,332.

Outside & Other Arson Up in 2008

The total number of reported arson fires increased by 10 from the 83 reported in 2007. Reported structure arsons decreased by four from the 16 reported the previous year.

³ In version 4 a vacant building was defined by having a Fixed Property Use code in the subsection of construction, unoccupied properties, between 910 & 919. However in version 5, the Property Use is separate from the Building Status. In v5 a building is considered vacant if the Building Status is coded: 1- Under Construction; 3-Idle, not routinely used; 4-Under major renovation; 5-Vacant, secured; 6-Vacant, unsecured; & 7-Being demolished. The building use is coded separately in the Property Use field.

⁴ In MFIRS v5 a fire is considered an arson if the Cause of Ignition = 1 (Intentional) and the Age of Person (Fire Module) is greater than 17 or if the field is blank; or if the Wildland Module is used, the Wildland Fire Cause = 7 (Incendiary) and the Age of the Person (Wildland Module) is greater than 17 or if the field is left blank.

Motor vehicle arsons remained the same with six reported in both 2007 and 2008. Reported outside and other arsons increased by 14 from the 60 reported in 2007.

ALL INCIDENTS

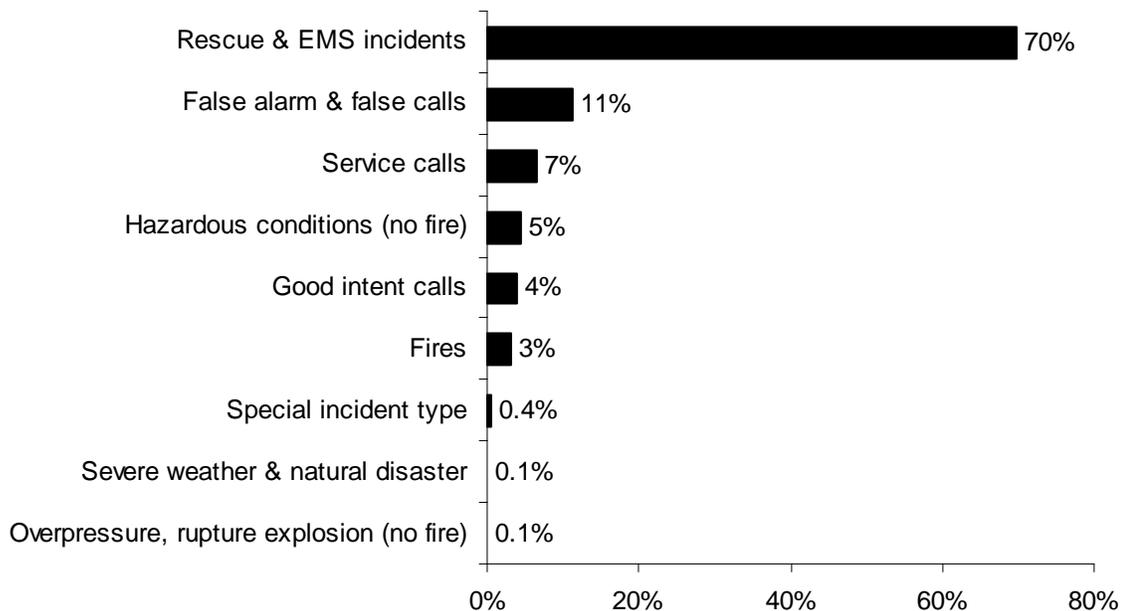

Rescue & EMS Calls Are Over 2/3 of All Reported Incidents

In 2008, Barnstable County fire departments reported 38,500 responses⁵ to MFIRS. Of these 38,500 incidents, 37,270 non-fire calls were voluntarily reported.

Of these 37,270 non-fire calls 26,838, or 70% of all of the responses reported in 2008, were reported rescue and emergency medical services (EMS) calls; 4,354, 11%, were reported false alarm or false calls; 2,562, or 7%, were reported service calls such as lock-outs, water or smoke problems, unauthorized burning or public service assistance; 1,747, or 5%, were reported hazardous condition calls with no fire; 1,506, or 4%, reported good intent calls; 154, or 0.4%, were special incident type calls such as citizen complaints; 56, or 0.1%, were severe weather responses; and 53, or 0.1%, were reported overpressure, rupture, explosion or overheat calls with no fire.

One thousand two hundred and thirty (1,230), or 3%, of the total responses submitted by Barnstable County fire departments were fires.

2008 Responses by Incident Type

⁵ These figures include responses in which Barnstable County fire departments gave mutual aid to other fire departments.

Barnstable County Departments Gave Aid 1039 Times

In 2008, Barnstable County fire departments reported coming to the aid of other fire departments 1,039 times. Of these 1,039 responses, 611, or 59%, were for rescue or EMS incidents; 148, or 14%, were for fires; 124, or 12%, were for service calls such as cover assignments; 93, or 9%, were for good intent calls; 38, or 4%, were for hazardous conditions calls with no fire; 23, or 2%, were for false alarms or false calls; one, or 0.1% was an overpressure, rupture, explosion or overheat call with no fire; and one, or 0.1%, were special incident type.

Barnstable County Received Mutual Aid in 748 Incidents

In 2008, Barnstable County fire departments received aid from surrounding departments in 748 incidents. Of these 748 incidents, 511, or 68%, were rescue and emergency medical services calls; 128, or 17%, were for fires; 38, or 5%, were false alarms or false calls; 29, or 4%, were hazardous conditions calls with no fire; 28, or 4%, were good intent calls; 11, or 1%, were service calls; and three, or 0.4%, were overpressure, rupture, explosion or overheat calls with no fire.

⁶ This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

⁷ These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Heat Source from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires, but is sometimes voluntarily reported.

Item First Ignited⁸	%	Factor Contrib. to Ignit.	%	%Unconfined⁹

⁸ This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

⁹ Some fields in version 5 allow for multiple entries. Therefore the number of entries may be greater than the actual number of incidents being analyzed. These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Factors Contributing to Ignition from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires.

¹⁰ This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

¹¹ These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Cause of Ignition from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires.

¹² The MA Military Reservation (MMR) Fire Department became a state fire department in October 2008. Prior to that it was the Otis Air Force Base Fire Department – a federal fire department and reported all its incidents to the Department of Defense. In 2008, MMR reported 179 total incidents (0 fires) to MFIRS from October through December.

2008 Fires

Berkshire County Fires in 2008

713 Total Fires — 430 Structures, 46 Vehicles & 237 Outside and Other Fires

Berkshire County ranked tenth out of the fourteen Massachusetts counties in total reported fires. Berkshire County Fire Departments reported 713 fires to the Massachusetts Fire Incident Reporting System (MFIRS) in 2008. The 430 structure fires, 46 motor vehicle fires, 121 brush, tree or lawn fires, 58 outside rubbish fires, 28 special outside fires, one cultivated crop or vegetation fire, and 29 other fires caused one civilian death, seven civilian injuries, seven fire service injuries and an estimated dollar loss of \$7 million. Berkshire County's fires accounted for 2% of the 30,136 Massachusetts fires reported in 2008.

Twenty-nine (29) of the 31 fire departments in Berkshire County either reported incidents to the Massachusetts Fire Incident Reporting System (MFIRS) or certified that they had no reportable fires in 2008.

Structure & Outside & Other Fires Up

The total number of reported fire incidents increased by 40 from the 673 reported in 2007. Reported structure fires increased by 55 from the 375 reported during the previous year. Motor vehicle fires decreased by 16 from the 62 reported the year before. Outside and other fires increased by one from the 236 reported in 2007.

Berkshire County was one of only three counties that saw an increase in brush fires in 2008. Reported brush fires in Berkshire County increased by 29, or 32% from 2007. Brush fires across the entire state decreased by 27%. In 2007 when most of the state saw a dramatic increase in brush fires, Berkshire County, went the opposite way with a 43% decrease in brush fires from 2006.

BERKSHIRE COUNTY FIRES FROM 2004 TO 2008

Year	Total Fires	Structure Fires	Vehicle Fires	Other Fires	Total Arsons	Structure Arsons	Vehicle Arsons	Other Arsons
2004	629	343	71	215	41	15	2	24
2005	723	381	51	291	52	12	1	39
2006	736	392	47	297	46	10	7	30
2007	673	375	62	236	30	12	1	17
2008	713	430	46	237	42	8	1	33

Fire and Fire Death Rates

Berkshire County had 5.3 fires per 1,000 population. That figure ranks Berkshire County fourth in the state and above the state rate of 4.8 fires per 1,000 population. Berkshire County also had 0.07 fire deaths per 10,000 populations ranking it seventh among Massachusetts counties and just below the state rate of 0.08 fire deaths per 10,000 population.

Berkshire Resident Killed in Smoking Fire

- On April 27, 2008, at 12:15 p.m., the Pittsfield Fire Department was called to a fatal smoking fire in a two-family home. A cigarette ignited the upholstered chair that the victim was sitting on. The victim was a 45-year old man. His clothes also ignited. He was possibly impaired by alcohol. No one else was injured at this fire. Smoke detectors were present but failed to operate because of a missing battery. There were no sprinklers. Damages from this fire were estimated to be \$75,000.

Sandisfield Had Berkshire County's Largest Loss Fire

- On February 1, 2008, at 5:25 a.m., the Sandisfield Fire Department was called to a fire in a single-family home of undetermined cause. No one was injured at this fire. Detectors were present and alerted the occupants. The building was not sprinklered. Damages from this fire were estimated to be \$747,949.

STRUCTURE FIRES**Reported Structure Fires Up**

The 430 structure fires caused one civilian death, six civilian injuries, seven fire service injuries and an estimated dollar loss of \$6.6 million. These incidents represented 60% of Berkshire County's reported fires in 2008. The average estimated dollar loss per structure fire was \$15,320. The total number of reported structure fires increased by 55, or 15%, from the 375 reported in 2007.

Arson Caused of 2% of Structure Fires

The eight structure arsons caused an estimated dollar loss of \$1,250. Arson was indicated as the cause of 2% of the structure fires and less than 1% of Berkshire County's structure fire dollar loss. The eight structure arsons accounted for 19% of the Berkshire County arson fires reported in 2008. The total number of reported structure arsons decreased by four from 12 in 2007.

38% of Structure Arsons Occurred in Residences

Three (3), or 38%, of Berkshire County's eight structure arsons occurred in residential occupancies. Two (2) occurred in special properties, and one occurred each in a public assembly property, an educational facility, and a business.

BUILDING FIRES

There were 427 building fires of different types in Berkshire County in 2008. These 427 building fires accounted for 99.3% of all structure fires in Berkshire County.

3/4 of Berkshire Building Fires Occurred in People's Homes

Three hundred and twenty-one (321), or 75%, of Berkshire County's 427 building fires occurred in residential occupancies. Twenty-four (24) fires took place in public assembly properties, including restaurants and churches. Twenty-three (23) fires occurred at educational facilities. Special properties had 17 fires. Storage facilities had 15 fires. Mercantile and business properties had 12 fires. Hospitals, prisons, and other institutional

buildings experienced 11 fires. Two (2) fires occurred at industrial facilities and two fires occurred at manufacturing and processing facilities in Berkshire County in 2008.

RESIDENTIAL FIRES

Residential Building Fires Up

There were 321 reported residential building fires in Berkshire County in 2008. These 321 fires are an increase of 26, or 9%, from the 295 residential building fires reported in 2007.

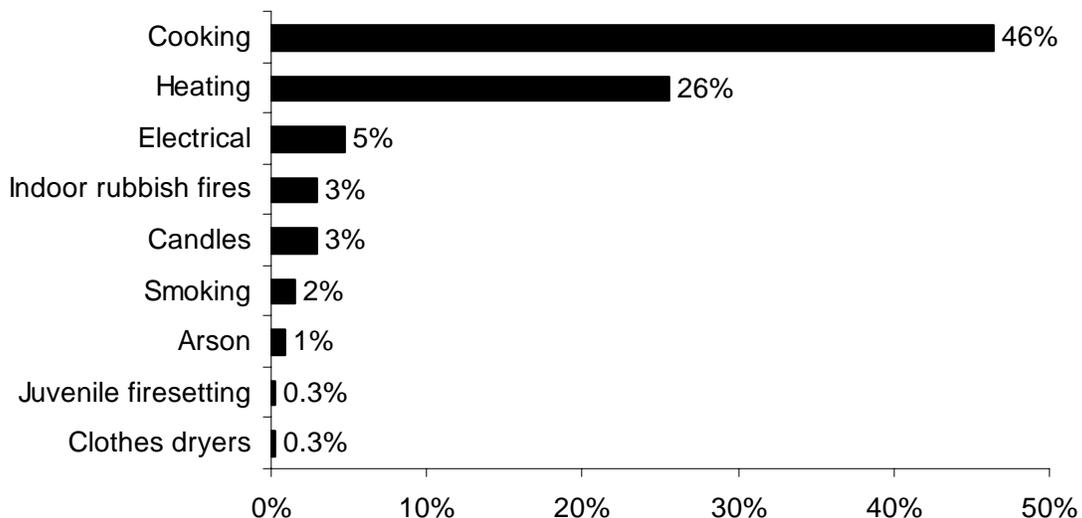

1- & 2-Family Homes Accounted for Almost 59% of Residential Building Fires

The peak fixed property uses for residential building fires were 1- or 2-family homes, accounting for 59% of the building fires in Berkshire County; 32% occurred in apartments; 4% happened in hotels or motels; 2% occurred in dormitories; 1% occurred in rooming houses; and another 1% happened in residential board and care facilities. Six (6), or 1% of the building fires in Berkshire County, occurred in unclassified residential buildings.

Unattended Cooking Causes 46% of Residential Fires

The leading cause of residential building fires in Berkshire County was unattended cooking and other unsafe cooking practices, accounting for 46% of the fires. Heating caused 26% of the residential building fires; of which 33, or 35%, were caused by chimney, fireplace or flue fires. Electrical problems caused 5% of the fires. Indoor rubbish fires and candles each caused 3%. Smoking caused 2% of these fires. Arson caused 1% of these fires. Juvenile-set fires and candles were each responsible for less than 1% of Berkshire County’s residential building fires in 2008.

2008 Leading Causes of Fires in Berkshire County Homes

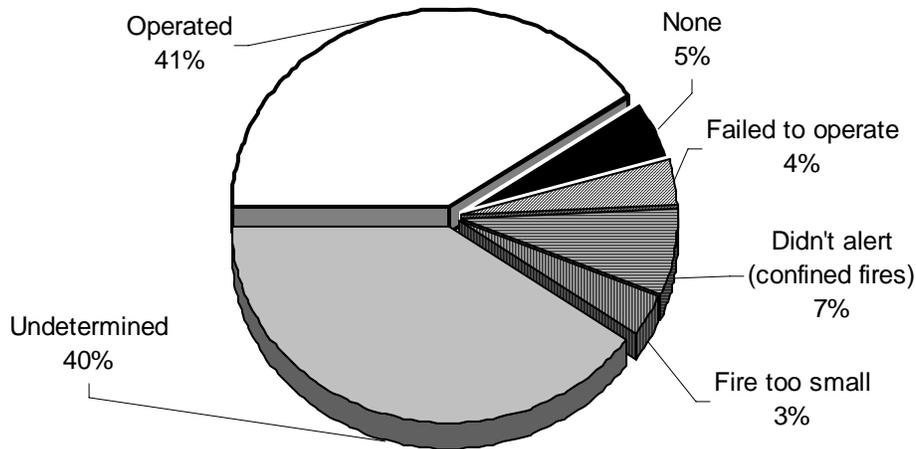

71% of Residential Building Fires Are Confined to Non-Combustible Containers¹

Two hundred and twenty-eight (228), or 71%, of these fires were confined to a non-combustible container. One hundred and thirty-six (136), or 42%, of all residential building fires reported in 2008 were cooking fires contained to a non-combustible container. Fires confined to a fuel burner or boiler malfunction accounted for 50, or 16%. Thirty (30) of the reported fires were confined to a chimney accounting for 9% of residential building fires. Twelve (12), or 4%, of these fires in Berkshire County in 2008 were indoor rubbish fires.

Detectors Alerted Occupants in 41% of Fires

Smoke or heat detectors operated and alerted the occupants in 130, or 41%, of the residential building fires. In 7% of these fires², the detectors did not alert the occupants. Detectors were present but did not operate in 4% of these incidents. In 5% of these fires, no detectors were present at all. The fire was too small to trigger the detector in 3% of the residential fires. Smoke detector performance was undetermined in 106 incidents, or 40% of Berkshire County’s residential building fires.

Detector Status in Berkshire County's Residential Structure Fires 2008

¹ In MFIRS v5 a fire in a building contained to a non-combustible container (Incident Type = 113-118) does not have to have a Fire Module completed. Therefore the following data fields do not need to be completed: Area of Origin, Detector Status, Item First Ignited, Heat Source, Factors Contributing to Ignition, Cause of Ignition, and Equipment Involved In Ignition. These incidents are not included in the analysis of these fields.

²These represent confined fires where it was reported that the detector did not alert the occupants.

Over 1/2 of Failed Detectors Had Missing or Disconnected Batteries

Of the 12 fires where smoke detectors were present but failed to operate, seven, or 58%, failed because the batteries were either missing or disconnected. Two (2) detectors failed because of a power failure or shut-off, causing 17% of the failed detectors in Berkshire County in 2008. One (1), or 8%, failed due to dead batteries. Another detector was defective (8%), and another detector failed because it was improperly placed (8%).

VACANT BUILDINGS**3% of Building Fires Occurred in Vacant Buildings**

Berkshire County reported 12 fires that occurred in buildings that were vacant, under construction or demolition³. This represented 3% of the total 427 building fires reported to MFIRS in 2008. Three (3) one- or two-family homes, two unclassified residential properties, one apartment building, one business; one outbuilding or shed, on warehouse, one detached residential parking garage, one livestock or poultry storage facility, and one clubhouse were reported as vacant building fire incidents.

Two (2), or 17%, of the vacant building fires in Berkshire County in 2008 was determined to be intentionally set. One of these fires occurred in a clubhouse while the other occurred at an unclassified business.

JUVENILE-SET FIRES**14 Juvenile-set Fires**

There were 10 reported juvenile-set fires in Berkshire County in 2008. The two structure fires, seven brush fires, and one unclassified fire caused one civilian injury and \$210 in estimated damages.

ARSONS**42 Total Arsons — 8 Structures, 1 Vehicle & 33 Other Arsons**

Forty-two (42), or 6%, of Berkshire County's 713 fires were intentionally set, or, for purposes of this analysis, arson⁴. The eight structure arsons, one motor vehicle arson and 33 outside and other arsons caused an estimated dollar loss of \$2,946.

Outside & Other Arsons Up

³ In version 4 a vacant building was defined by having a Fixed Property Use code in the subsection of construction, unoccupied properties, between 910 & 919. However in version 5, the Property Use is separate from the Building Status. In v5 a building is considered vacant if the Building Status is coded: 1- Under Construction; 3-Idle, not routinely used; 4-Under major renovation; 5-Vacant, secured; 6-Vacant, unsecured; & 7-Being demolished. The building use is coded separately in the Property Use field.

⁴ In MFIRS v5 a fire is considered an arson if the Cause of Ignition = 1 (Intentional) and the Age of Person (Fire Module) is greater than 17 or if the field is blank; or if the Wildland Module is used, the Wildland Fire Cause = 7 (Incendiary) and the Age of the Person (Wildland Module) is greater than 17 or if the field is left blank.

The total number of reported arson fires increased by 12 from the 30 reported in 2007. Reported structure arsons decreased by four from 12 in 2007. Motor vehicle arsons remained the same with one incident reported in both 2007 and 2008. Reported outside and other arsons increased by 16 from the 17 reported in 2007.

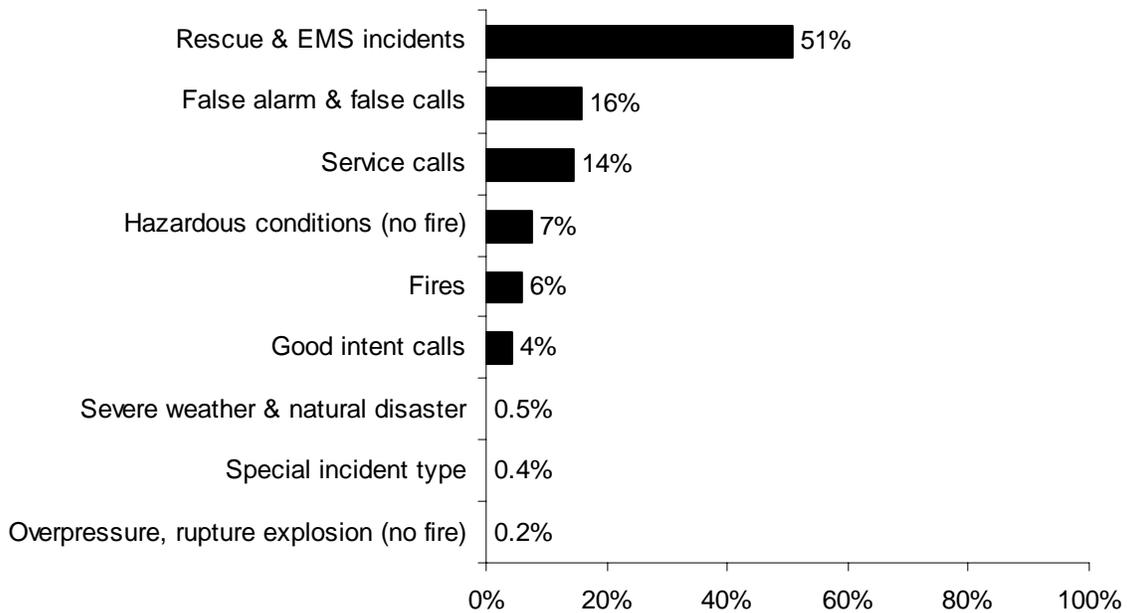

ALL INCIDENTS

Rescue & EMS Calls Are Over 1/2 of All Reported Responses

In 2008, Berkshire County fire departments reported 12,687 responses⁵ to MFIRS. Of these 12,687 incidents, 11,921 non-fire incidents were voluntarily reported.

Of these 11,921 non-fire responses 6,453, or 51% of all the responses reported in 2008, were reported rescue and emergency medical services (EMS) calls; 2,006, or 16%, were reported false alarm or false calls; 1,824, or 14%, were reported service calls such as lock-outs, water or smoke problems, unauthorized burning or public service assistance; 945, or 7%, were reported hazardous condition calls with no fire; 557, or 4%, were reported good intent calls; 59, or 0.5%, were severe weather responses; 54, or 0.4% were special incident type calls such as citizen complaints; and 23, or 0.2%, were reported overpressure, rupture, explosion or overheat calls with no fire.

2008 Responses by Incident Type

⁵ These figures include responses in which Berkshire County fire departments gave mutual aid to other fire departments.

Seven hundred and sixty-six (766), or 6%, of the total responses submitted by Berkshire County fire departments were fires.

Berkshire County Departments Reported Giving Mutual Aid 162 Times

In 2008, Berkshire County fire departments reported coming to the aid of other fire departments 162 times. Of these 162 responses, 67, or 41%, were for rescue or EMS calls; 53, or 33%, were for fires; 23, or 14%, were for service calls such as cover assignments; seven, or 4%, were for severe weather, five, or 3%, were for hazardous conditions calls with no fire; four, or 2% were good intent calls; two, or 1%, were for false alarms; and one, or 1% of all the Berkshire County mutual aid given responses, was a special incident type call.

Berkshire County Received Mutual Aid in 283 Incidents

In 2008, Berkshire County fire departments reported receiving aid from surrounding departments in 283 incidents. Of these 283 incidents, 207, or 73%, were rescue and emergency medical services calls; 53, or 19%, were for fires; 10, or 4%, were hazardous conditions calls with no fire; five, or 2%, were service calls; four, or 1%, were false alarms or false calls; two, or 1%, were severe weather calls; one, or 0.4%, was a good intent call; and one call, or 0.4%, was a special incident type call.

Living room	2%			

⁶ This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

⁷ These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Heat Source from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires, but is sometimes voluntarily reported.

Didn't alert occupants	10%
Undetermined	47%

⁸ This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

⁹ Some fields in version 5 allow for multiple entries. Therefore the number of entries may be greater than the actual number of incidents being analyzed. These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Factors Contributing to Ignition from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires.

¹⁰ This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

¹¹ These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Cause of Ignition from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires.

Pittsfield Fires in 2008

312 Total Fires — 166 Structures, 19 Vehicles & 127 Other Fires

The Pittsfield Fire Department reported 312 fires to the Massachusetts Fire Incident Reporting System (MFIRS) in 2008. The 166 structure fires, 19 motor vehicle fires, 57 brush fires, 40 outside rubbish fires, 23 special outside fires; and seven unclassified fires caused one civilian death, two civilian injuries, four firefighter injuries and an estimated dollar loss of \$2 million.

1 Male Resident Killed in a Smoking Fire

- On April 27, 2008, at 12:15 p.m., the Pittsfield Fire Department was called to a fatal smoking fire in a two-family home. A cigarette ignited the upholstered chair that the victim was sitting on. The victim, a 45-year old man, clothes also ignited. He was possibly impaired by alcohol. No one else was injured at this fire. Smoke detectors were present but failed to operate because of a missing battery. There were no sprinklers. Damages from this fire were estimated to be \$75,000.

Structure Fires Up in Slightly 2008

Total fires decreased by five from the 317 incidents reported in 2007. Reported structure fires were increased by 11 from the 155 reported during the previous year. Motor vehicle fires decreased by 12 from 31 the year before. Outside and other fires decreased by four from the 131 reported in 2007.

PITTSFIELD FIRES FROM 2004 TO 2008

	Total Fires	Structure Fires	Vehicle Fires	Other Fires	Total Arsons	Structure Arsons	Vehicle Arsons	Other Arsons

2006	336	155	19	162	26	5	5	16
2007	317	155	31	131	16	8	1	7
2008	312	166	19	127	26	5	1	20

BUILDING FIRES

There were 163 building fires of different types in Pittsfield in 2008. These 163 building fires accounted for 98.2% of all structure fires in Pittsfield.

71% of Building Fires in Homes

The 163 building fires that occurred in Pittsfield in 2008 can be broken down by fixed property use as follows: 115, or 71% of all building fires, were in residential properties; 15 fires occurred in special properties; nine fires occurred in public assembly properties; eight fires happened in storage facilities; six fires occurred in educational facilities; five happened in mercantile or business properties; three fires occurred in institutional facilities; one fire occurred at a manufacturing or processing facility; and one fire occurred at a forest processing facility.

RESIDENTIAL FIRES

Residential Building Fires Down

There were 115 reported residential building fires in Pittsfield in 2008. These 115 fires are an increase of 11 from the 126 reported residential building fires reported in 2007.

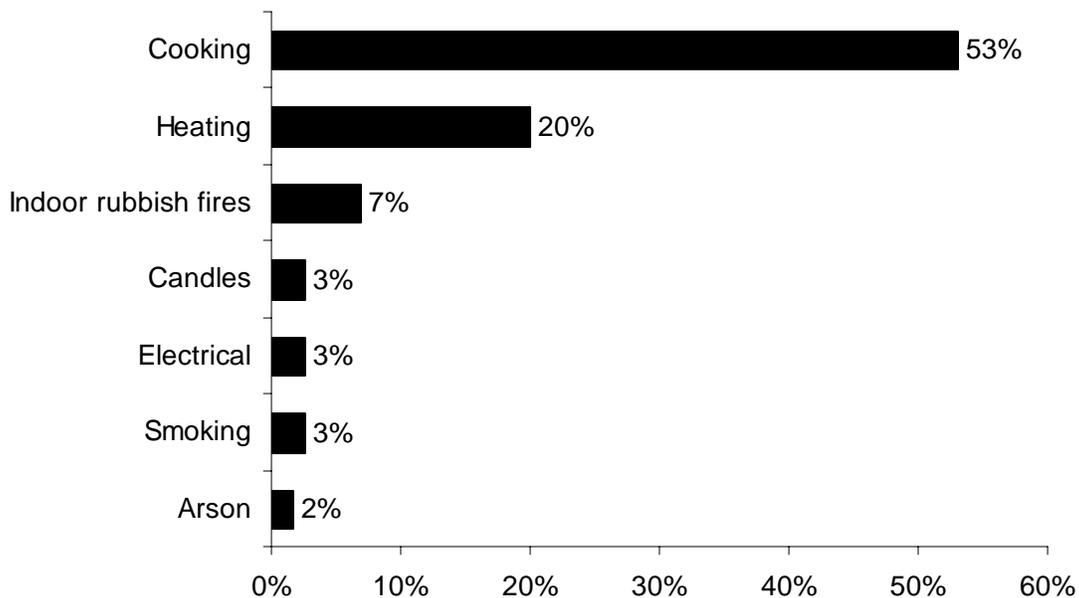

1- or 2-Family Homes Accounted for 58% of Residential Building Fires

The peak fixed property uses for residential building fires were 1- or 2-family homes, accounting for 58% of the building fires in Pittsfield; 36% occurred in apartments; 2% happened in rooming houses; 2% occurred in hotels and motels 1% happened in residential board and care facilities; and 1% occurred in unclassified residential buildings.

Unattended Cooking Leading Cause of Residential Fires

The leading cause of residential building fires in Pittsfield was unattended cooking and other unsafe cooking practices, accounting for 53% of these fires. Heating fires caused 20% of these fires. Indoor rubbish fires caused 7% of residential fires. Candles, electrical problems and smoking each caused 3% of the fires. Arsons were the cause of 2% of the fires in Pittsfield's residential occupancies in 2008.

2008 Leading Causes of Fires in Pittsfield's Homes

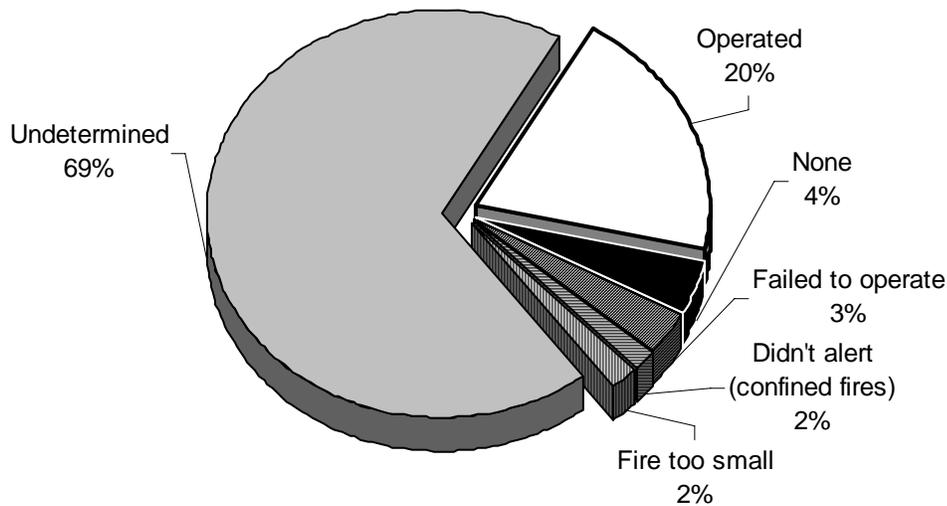

74% of Residential Building Fires Are Confined to Non-Combustible Containers¹

Eighty-five (85), or 74% of all residential building fires were confined to non-combustible containers in 2008. Fifty-three (53), or 46%, of all residential building fires reported in 2008 were cooking fires contained to a non-combustible container. Nineteen (19), or 17%, were fires confined to a fuel burner or boiler malfunction. Nine (9), or 8%, of these fires, were rubbish fires contained to a non-combustible container. Four (4) fires, or 1%, were reported to have been contained to a chimney or flue.

Detectors Worked in Only 1/4 of Fires

Smoke or heat detectors operated and alerted the occupants in 23, or 20%, of the residential building fires. In 2% of these fires², the detectors did not alert the occupants. There were no detectors in 4% of these fires. Detectors were present but did not operate in 3% of these incidents. The fire was too small to trigger the detector in 2% of these fires. Smoke detector performance was undetermined in 79 incidents, or 69% of Pittsfield’s residential building fires.

Detector Status in Pittsfield's Residential Fires 2008

The lack of data on smoke detector performance in confined fires does not present a true picture of functioning smoke alarms in Pittsfield. Improved collection of data on whether or not the smoke alarms alerted the occupants to the fire would provide a better understanding of this issue.

¹ In MFIRS v5 a fire in a building contained to a non-combustible container (Incident Type = 113-118) does not have to have a Fire Module completed. Therefore the following data fields do not need to be completed: Area of Origin, Detector Status, Item First Ignited, Heat Source, Factors Contributing to Ignition, Cause of Ignition, and Equipment Involved In Ignition. These incidents are not included in the analysis of these fields.

² These represent confined fires where it was reported that the detector did not alert the occupants.

3 of 4 Detectors Failed Detectors From a Missing Battery

Of the four fires where smoke detectors were present but failed to operate, three, or 75%, failed because of a missing battery. Improper installation or placement, or 25%, was the reason the other detector failed to operate.

VACANT BUILDINGS**4% of Building Fires Occurred in Vacant Buildings**

Pittsfield reported seven fires that occurred in buildings that were vacant, under construction or demolition³. This represented 4% of the total 163 building fires reported to MFIRS in 2008. Two (2) 1- or 2-family homes, one apartment, one country club clubhouse, one unclassified business, and one detached residential parking garage were reported as vacant building fire incidents.

JUVENILE-SET FIRES**1 Juvenile-set Fire**

There was one juvenile-set fires in Pittsfield in 2008. This structure fire caused an estimated \$5,000 in damages.

ARSONS**26 Arsons⁴ - 5 Structure, 1 Motor Vehicle and 20 Outside & Other**

Twenty-six (26), or 8%, of Pittsfield's 312 fires were considered intentionally set, or, for purposes of this analysis, arson. There were five structure arsons, one motor vehicle arson and 20 outside and other arsons.

Outside & Other Arsons Up

The total number of arsons increased by 10 from the 16 reported in 2007. Reported structure arsons decreased by three from the eight reported in 2007. Reported motor vehicle arsons remained the same with one reported in both 2007 and 2008. Outside and other arsons increased by 13 from the seven reported the year before.

91 Fires Reported as Undetermined or Still Under Investigation

In 2008, Pittsfield reported 91 fires under investigation or cause undetermined after investigation. Eighty-three (83), or 91%, of these fires were reported to be undetermined after investigation. The other eight, or 9%, were still under investigation.

³ In version 4 a vacant building was defined by having a Fixed Property Use code in the subsection of construction, unoccupied properties, between 910 & 919. However in version 5, the Property Use is separate from the Building Status. In v5 a building is considered vacant if the Building Status is coded: 1- Under Construction; 3-Idle, not routinely used; 4-Under major renovation; 5-Vacant, secured; 6-Vacant, unsecured; & 7-Being demolished. The building use is coded separately in the Property Use field.

⁴ In MFIRS v5 a fire is considered an arson if the Cause of Ignition = 1 (Intentional) and the Age of Person (Fire Module) is greater than 17 or if the field is blank; or if the Wildland Module is used, the Wildland Fire Cause = 7 (Incendiary) and the Age of the Person (Wildland Module) is greater than 17 or if the field is left blank.

Twenty-five (25), or 27%, of these 91 fires were structure fires. Five (5), or 5% were motor vehicle fires; and 61, or 67%, were outside or other fires. Because so many fires or under investigation or undetermined after investigation, the true arson number might be actually higher in Pittsfield in 2008.

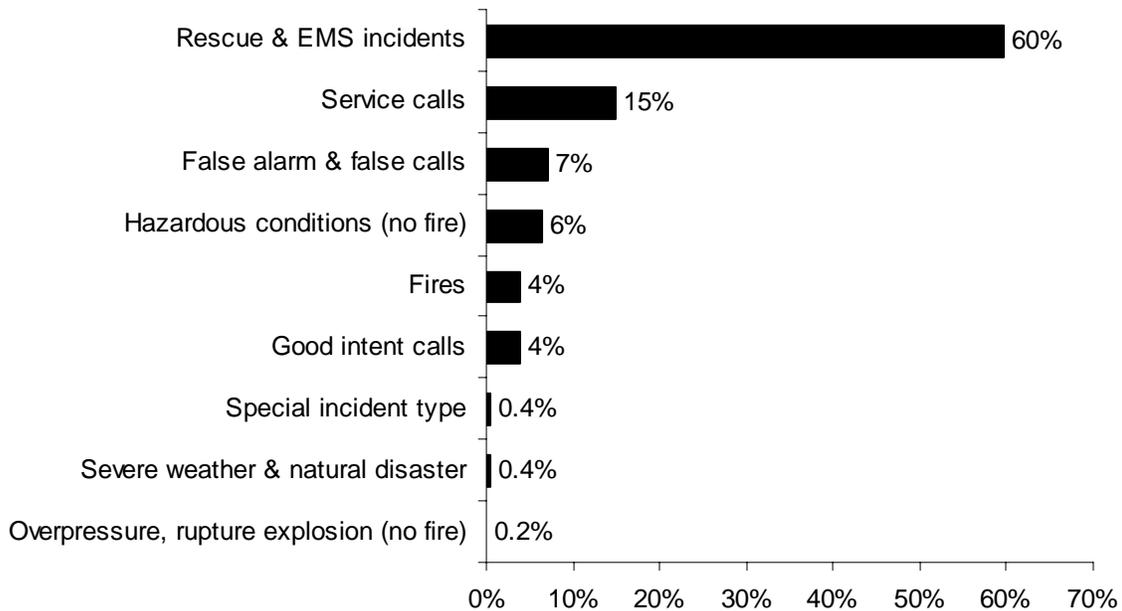

Rescue & EMS Calls Are 60% of All Reported Incidents

In 2008, Pittsfield voluntarily reported 7,725 incidents to MFIRS. Of these 7,725 incidents, 7,411, or 96%, were non-fire incidents.

Of these 7,411 non-fire incidents 4,608, or 60% of all reported incidents in 2008, were reported rescue and emergency medical services (EMS) calls; 1,154, or 15%, were reported service calls such as lock-outs, water or smoke problem, unauthorized burning or public service assistance; 762, or 7%, were reported false alarm or false calls; 500, or 6%, were reported hazardous condition calls with no fire; 310, or 4%, were reported good intent calls; 33, or 0.4%, were special type incidents; 31, or 0.4%, were severe weather calls; and 13, or 0.2%, were reported overpressure, rupture, explosion or overheat calls with no fire.

In 2008, Pittsfield reported 314 fires, accounting for 4% of all reported incidents.

2008 Incidents by Incident Type

Pittsfield Gave Mutual Aid in 4 Incidents

In 2008, Pittsfield reported giving mutual aid to other surrounding fire departments in four incidents. Two, or 50%, were for fires; and the other two, or 50%, were for hazardous condition calls with no fire.

Pittsfield Received Mutual Aid in 3 Incidents

In 2008, surrounding fire departments gave aid to Pittsfield in three incidents. Of these three incidents, one, or 33%, was for a fire; one, or 33%, was a service call; and one, or 33%, was a rescue or EMS call.

⁷ This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

⁸ Some fields in version 5 allow for multiple entries. Therefore the number of entries may be greater than the actual number of incidents being analyzed. These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Factors Contributing to Ignition from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires.

⁹ This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

¹⁰ These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Cause of Ignition from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires.

¹¹ This includes the fires that Pittsfield responded to outside of their jurisdiction as mutual aid given.

Bristol County Fires 2008

2008 Fires

Bristol County Fires in 2008

2,311 Total Fires — 822 Structures, 311 Vehicles & 1,178 Other Fires

Bristol County ranked seventh out of the fourteen Massachusetts counties in total reported fires. The county reported 2,311 fires to the Massachusetts Fire Incident Reporting System (MFIRS) in 2008. The 822 structure fires, 311 motor vehicle fires, 566 brush, tree or lawn fires, 366 outside rubbish fires, 137 special outside fires, four cultivated vegetation or crop fires, and 105 other fires caused three civilian deaths, 32 civilian injuries, 20 fire service injuries and an estimated dollar loss of \$13 million. Bristol County's fires accounted for 8% of the 30,136 Massachusetts fires reported in 2008.

All 22, or 100% of the fire departments in Bristol County reported incidents to the Massachusetts Fire Incident Reporting System (MFIRS).

Motor Vehicle and Outside & Other Fires Down

The total number of reported fire incidents decreased by 206 from the 2,517 reported in 2007. Reported structure fires increased by 33 from the 789 reported during the previous year. The total number of reported motor vehicle fires dropped by 42 from the 353 incidents reported during 2007. Reported outside and other fires decreased by 197 from the 1,375 reported the year before.

BRISTOL COUNTY FIRES FROM 2004 TO 2008

Year	Total Fires	Structure Fires	Vehicle Fires	Other Fires	Total Arsons	Structure Arsons	Vehicle Arsons	Other Arsons
2004	2,193	807	423	963	163	42	26	95
2005	2,499	890	423	1,186	145	43	26	76
2006	2,331	837	353	1,141	159	53	38	68
2007	2,517	789	353	1,375	139	32	28	79
2008	2,311	822	311	1,178	129	31	22	76

Fire and Fire Death Rates

Bristol County had 4.3 fires per 1,000 population. That figure ranks Bristol County seventh in the state and below the state rate of 4.8 fires per 1,000 population. Bristol County also had 0.06 fire deaths per 10,000 populations ranking it eighth among Massachusetts counties and below the state rate of 0.08 fire deaths per 10,000 population.

3 Fires Kills 3 Bristol County Residents

- On March 20, 2008, at 12:38 p.m., the New Bedford Fire Department was called to a fatal smoking fire in a single-family home. The victim, an 85-year old man, fell asleep while smoking in a living room chair. The victim did awaken and attempted to escape. He died from smoke inhalation and the burns sustained in the fire. Detectors were present but it was undetermined if they operated. No one else was injured in this fire. Damages from this fire were estimated to be \$70,000.

- On May 29, 2008, at 12:35 p.m., the Fall River Fire Department was called to a fatal cooking fire at a three-unit apartment building. The victim, a 56-year old man, was cooking when heat from the hotplate started the fire. The victim was overcome by heat and smoke. He was transported to a Rhode Island hospital where he later succumbed to his injuries. No one else was injured at this fire. Detectors were present and alerted the other tenants. There were no sprinklers. Damages from the blaze were estimated to be \$6,000.
- On December 16, 2008, at 9:46 a.m., the New Bedford Fire Department was called to a fatal smoking fire in a single-family home. The fire began in a first floor bedroom. The victim, a 68-year old man fell asleep while smoking. He was on prescription medication that decreased his level of consciousness and ability to respond to the fire. The victim was the only thing that burned. There were no other injuries associated with this fire. Smoke detectors and sprinklers were not present. No estimation of the damages was made for this fire.

Westport Has Bristol County's Largest Loss Fire

- On August 14, 2008, at 3:22 a.m., the Westport Fire Department responded to a boat fire on the Westport River. During suppression operations, the catamaran began to sink extinguishing most of the fire. Investigators were unable to determine the cause of the fire. No one was injured by this fire. Damages were estimated to be \$1 million.

STRUCTURE FIRES

Reported Structure Fires Up Slightly

The 822 structure fires caused three civilian deaths, 24 civilian injuries, 15 fire service injuries and an estimated dollar loss of \$10.4 million. These incidents represented 36% of Bristol County's reported fires in 2008. The average estimated dollar loss per structure fire was \$12,680. The total number of reported structure fires increased by 33, or 4%, from the 789 reported in 2007.

Arson Caused of 4% of Structure Fires

The 31 structure arsons caused four fire service injuries and an estimated dollar loss of \$1.1 million. Arson was indicated as the cause of 4% of the structure fires and 11% of Bristol County's structure fire dollar loss. The 31 structure arsons accounted for 24% of the Bristol County arson fires reported in 2008. The total number of reported structure arsons decreased by one, or 3%, from 32 in 2007.

Over 2/3 of Structure Arsons Occurred in Residences

Sixty-eight percent (68%) of Bristol County's 31 structure arsons occurred in residential occupancies; 10% occurred each in storage facilities; 6% each happened in public assembly and educational properties; and 3% each occurred in manufacturing or processing facilities, mercantile or business properties, and special properties.

BUILDING FIRES

There were 812 building fires of different types in Bristol County in 2008. These 812 building fires accounted for 98.3% of all building fires in Bristol County.

80% of Bristol Building Fires Occurred in People's Homes

Six hundred and forty-eight (648), or 80%, of Bristol County's 812 building fires occurred in residential occupancies. Thirty-three (33) fires took place in storage properties. Mercantile and business properties also had 33 fires. Thirty-one (31) fires took place in public assembly properties, including restaurants and churches. Twenty-two (22) fires took place in manufacturing and processing facilities. Special properties had 18 fires. Hospitals, prisons, and other institutional buildings experienced 10 fires. Educational facilities also had 10 fires. Three (3) fires occurred in industrial, utility, defense, agricultural or mining facilities in Bristol County in 2008.

RESIDENTIAL FIRES

Residential Building Fires Are Up

There were 648 reported residential building fires in Bristol County in 2008. These 648 fires are an increase of 56, or 9%, from the 592 residential building fires reported in 2007.

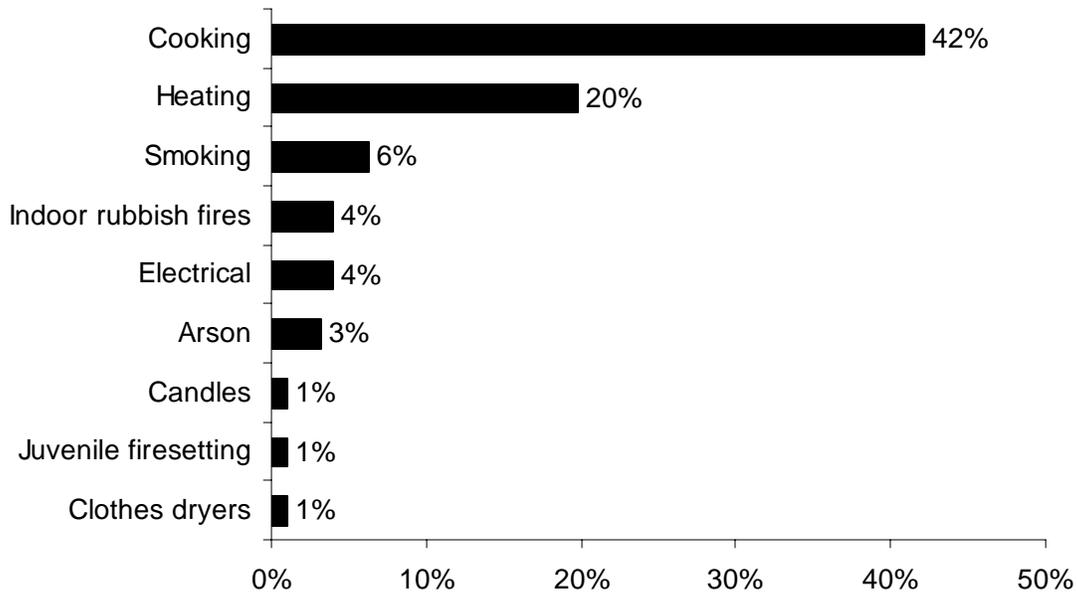

1- & 2-Family Homes Accounted for Over 1/2 of Residential Building Fires

The peak fixed property uses for residential building fires were 1- & 2-family homes, accounting for 53% of the building fires in Bristol County; 42% occurred in apartments; 2% happened in rooming houses; and 1% each occurred in dormitories and residential board and care facilities. Ten (10), or 2% of the residential building fires in Bristol County occurred in unclassified residential buildings.

Unsafe Cooking Leading Cause of Residential Fires

The leading cause of residential building fires in Bristol County was unattended cooking and other unsafe cooking practices, accounting for 42% of these fires. The second leading cause of residential building fires was heating equipment, accounting for 20%. Smoking caused 6% of the fires in people's homes. Indoor rubbish fires and electrical problems were each responsible for 4% of these fires. Arsons accounted for 3% of fires in residences. Candles, juvenile-set fires and clothes dryers each accounted for 1% of Bristol County's residential building fires in 2008.

2008 Leading Causes to Fires in Bristol County Homes

58% of Residential Building Fires Are Confined to Non-Combustible Containers¹

Three hundred and seventy-eight (378), or 58% of all residential building fires were reported as confined to non-combustible containers in 2008. Two hundred and forty-two (242), or 37%, of all residential building fires reported in 2008 were cooking fires contained to a non-combustible container. Sixty-two (62), or 10%, were fires confined to a fuel burner or boiler malfunction. Forty-five (45) of the reported fires were confined to a chimney accounting for 7% of residential building fires. Twenty-nine (29), or 4%, of these fires were rubbish fires contained to a non-combustible container in Bristol County in 2008.

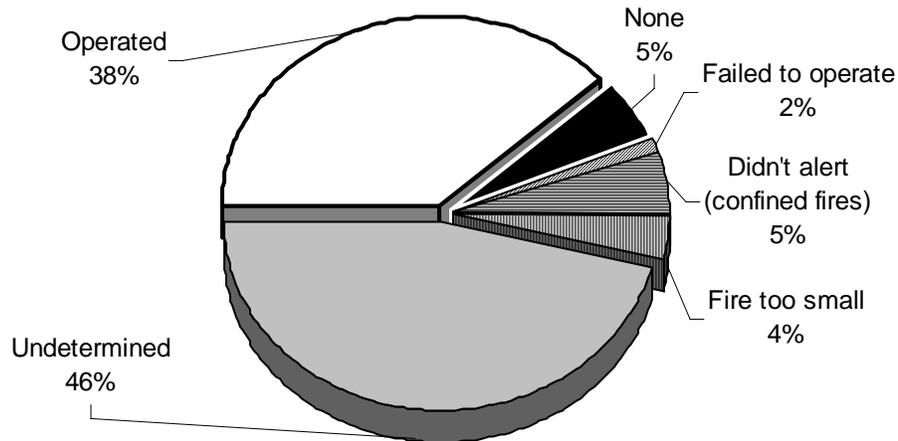

Detectors Alerted Occupants in Over 1/3 of Fires

Smoke or heat detectors operated and alerted the occupants in 248, or 38%, of the residential building fires. In 5% of these fires², the detectors did not alert the occupants. Detectors were present but did not operate in 2% of these incidents. In 5% of these fires, no detectors were present at all. The fire was too small to trigger the detector in 4% of the residential fires. Smoke detector performance was undetermined in 298 incidents, or 46% of Bristol County's residential building fires.

¹ In MFIRS v5 a fire in a building contained to a non-combustible container (Incident Type = 113-118) does not have to have a Fire Module completed. Therefore the following data fields do not need to be completed: Area of Origin, Detector Status, Item First Ignited, Heat Source, Factors Contributing to Ignition, Cause of Ignition, and Equipment Involved In Ignition. These incidents are not included in the analysis of these fields.

² These represent confined fires where it was reported that the detector did not alert the occupants.

Detector Status in Bristol County's Residential Structure Fires 2008

Almost 1/3 of Failed Detectors Were Missing Batteries

Of the 10 fires where smoke detectors were present but failed to operate, three, or 30%, failed because the batteries were either missing or disconnected. One (1), or 10% failed because of dead batteries. It was undetermined or unclassified in six cases, or 60%, why the detectors failed to operate.

VACANT BUILDINGS

5% of Building Fires Occurred in Vacant Buildings

Bristol County reported 44 fires that occurred in buildings that were vacant, under construction or demolition³. This represented 5% of the total 812 building fires reported to MFIRS in 2008. Twenty-five (25) fires occurred in vacant residential properties. Eleven (11) vacant building fires occurred in storage facilities. Two (2) of these fires happened in special properties. Public assembly properties, educational facilities, mercantile and business properties and a manufacturing facilities each accounted for one vacant building fire incident in Worcester County in 2008.

Eleven (11), or 25%, of the vacant building fires in Bristol County in 2008 were determined to be intentionally set. Six (6) occurred in apartment buildings; and one each

³ In version 4 a vacant building was defined by having a Fixed Property Use code in the subsection of construction, unoccupied properties, between 910 & 919. However in version 5, the Property Use is separate from the Building Status. In v5 a building is considered vacant if the Building Status is coded: 1- Under Construction; 3-Idle, not routinely used; 4-Under major renovation; 5-Vacant, secured; 6-Vacant, unsecured; & 7-Being demolished. The building use is coded separately in the Property Use field.

occurred in a single-family home, a high school, a manufacturing facility, a parking garage and a shed.

JUVENILE-SET FIRES

12 Juvenile-set Fires

There were 12 reported juvenile-set fires in Bristol County in 2008. The five structure fires, one motor vehicle fire, four brush fires, one special outside fire, and one unclassified fire caused two civilian injuries and \$54,900 in estimated damages.

ARSONS

129 Total Arsons⁴ — 31 Structures, 22 Vehicles & 76 Other Arsons

Bristol County Fire Departments reported that 129, or 6%, of Bristol County's 2,311 fires were considered intentionally set, or, for purposes of this analysis, arson. The 31 structure arsons, 22 motor vehicle arsons and 76 outside and other arsons caused four fire service injuries and an estimated dollar loss of \$1.5 million.

All Arsons Down

The total number of reported arson fires decreased by 210 from the 139 reported in 2007. Structure arsons decreased by one from the 32 reported in 2007. Motor vehicle arsons decreased by six from the 28 reported last year. Outside and other arsons dropped three from the 79 reported in 2007.

ALL INCIDENTS

Rescue & EMS Calls Are Over 1/2 of All Reported Responses

In 2008, fire departments in Bristol County reported 46,333 responses⁵ to MFIRS. Of these 46,333 incidents, 43,959 non-fire calls were voluntarily reported.

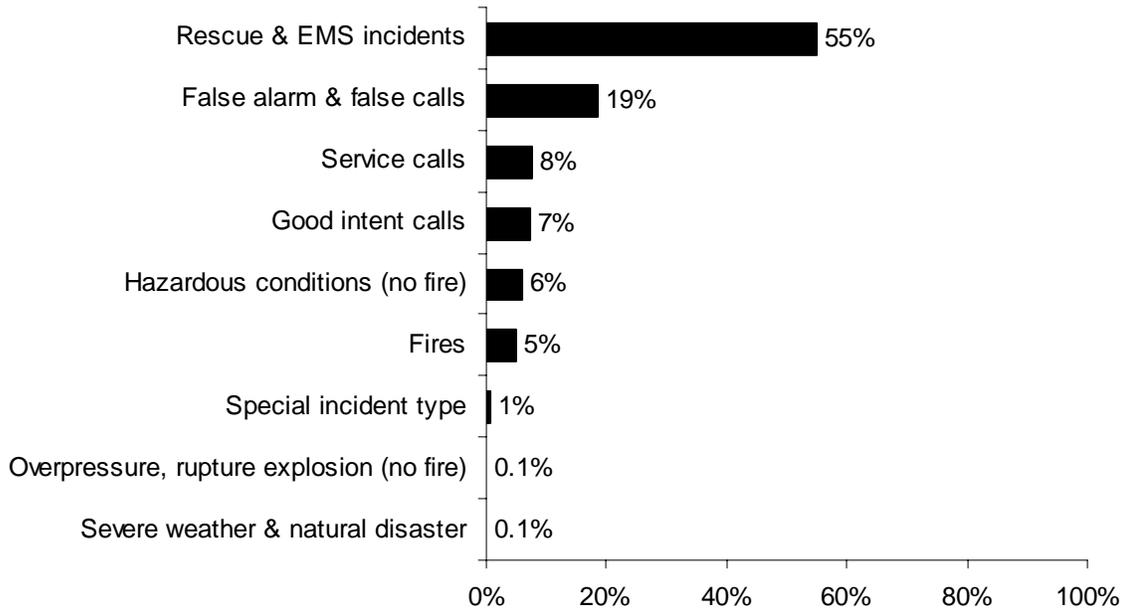

Of these 43,959 non-fire calls 25,424, or 55% of all the reported responses, were reported rescue and emergency medical services (EMS) calls; 8,599, or 19%, were reported false alarm or false calls; 3,479, or 8%, were reported service calls such as lock-outs, water or smoke problems, unauthorized burning or public service assistance; 3,315, or 7%, were reported good intent calls; 2,722, or 6%, were reported hazardous condition calls with no fire; 294, or 1%, were special incident type calls such as citizen complaints; 64, or 0.1%, were reported overpressure, rupture, explosion or overheat calls with no fire; and 62, or 0.1% were severe weather responses.

⁴ In MFIRS v5 a fire is considered an arson if the Cause of Ignition = 1 (Intentional) and the Age of Person (Fire Module) is greater than 17 or if the field is blank; or if the Wildland Module is used, the Wildland Fire Cause = 7 (Incendiary) and the Age of the Person (Wildland Module) is greater than 17 or if the field is left blank.

⁵ These figures include responses in which Bristol County fire departments gave mutual aid to other fire departments.

Two thousand three hundred and seventy-four (2,374), or 5%, of the total responses submitted by Bristol County fire departments were fires.

2008 Responses by Incident Type

Bristol County Fire Departments Gave Mutual Aid 1,178 Times

In 2008, Bristol County fire departments reported coming to the aid of other fire departments 1,178 times. Of these 1,178 responses, 851, or 72%, were for rescue or EMS calls; 143, or 12%, were for service calls such as cover assignments; 88, or 7%, were for good intent calls; 67, or 6%, were for fires; 18, or 2%, were for hazardous conditions calls with no fire; nine, or 1%, were for false alarms or false calls; and two, or less than 1%, were special incident types.

Bristol County Received Mutual Aid in 945 Incidents

In 2008, Bristol County fire departments reported receiving aid from surrounding departments in 945 incidents. Of these 945 incidents, 795, or 84%, were rescue and emergency medical services calls; 97, or 10%, were for fires; 22, or 2%, were false alarms or false calls; 13, or 1%, were good intent calls; nine, or 1%, were service calls; eight, or 1%, were hazardous conditions calls with no fire; and one, or less than 1% was a reported overpressure, rupture, explosion or overheat call.

Item First Ignited⁸	%	Factor Contrib. to Ignit.	%	%Unconfined⁹

Boiler, furnace, cent. heat unit	10%	Intentional	3%	8%
Chimney or flue	7%	Cause under investigation	4%	9%
		Undetermined	5%	11%
		Act of Nature	1%	3%

Detector Alerted Occupants (Confined Fires in Non-Combustible Containers)

Alerted Occupants	30%
Didn't Alert Occupants	9%
Undetermined	61%

⁸ This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

⁹ Some fields in version 5 allow for multiple entries. Therefore the number of entries may be greater than the actual number of incidents being analyzed. These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Factors Contributing to Ignition from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires.

¹⁰ This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

¹¹ These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Cause of Ignition from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires.

Fall River Fires in 2008

472 Total Fires — 232 Structures, 65 Vehicles & 175 Other Fires

The Fall River Fire Department reported 472 fires to the Massachusetts Fire Incident Reporting System (MFIRS) in 2008. The 232 structure fires, 65 motor vehicle fires, 87 brush fires, 63 trash fires, nine special outside fires, and 16 unclassified fires caused one civilian death, 11 civilian injuries, four fire service injuries and an estimated dollar loss of \$1.3 million.

1 Fall River Resident Killed in a Cooking Fire

- On May 29, 2008, at 12:35 p.m., the Fall River Fire Department was called to a fatal cooking fire at a three-unit apartment building. The victim, a 56-year old man, was cooking when heat from the hotplate started the fire. The victim was overcome by heat and smoke. He was transported to a Rhode Island hospital where he later succumbed to his injuries. No one else was injured at this fire. Detectors were present and alerted the other tenants. There were no sprinklers. Damages from the blaze were estimated to be \$6,000.

Structure & Other Fires Down

Total fires decreased by 117 from the 589 fires reported in 2007. Reported structure fires decreased by 13 from the 245 reported during the previous year. Motor vehicle fires increased by nine from 56 the year before. Outside and other fires decreased by 113 from 288 the year before.

FALL RIVER FIRES FROM 2004 TO 2008

	Total Fires	Structure Fires	Vehicle Fires	Other Fires	Total Arsons	Structure Arsons	Vehicle Arsons	Other Arsons
2004	515	211	91	213	34	15	4	15
2005	598	262	95	241	40	23	6	11
2006	559	248	74	237	50	24	8	18
2007	589	245	56	288	35	13	4	18
2008	472	232	65	175	20	7	3	10

BUILDING FIRES

There were 231 building fires of different types in Fall River in 2008. These 231 building fires accounted for 99.6% of all structure fires in Fall River.

Over 3/4 of Building Fires in Homes

The 231 building fires that occurred in Fall River in 2008 can be broken down by fixed property use as follows: 180, or 78% of all structure fires, were in residential properties; 11 fires took place in a special properties; another 11 happened in each at public assembly properties; eight fires occurred manufacturing or processing facilities; six fires each occurred in institutional facilities, mercantile or business properties, and storage facilities; and three fires happened in educational facilities.

RESIDENTIAL FIRES

Residential Building Fires Are Up Slightly

There were 180 reported residential building fires in Fall River in 2008. These 180 residential building fires are an increase of six, or 3%, from the 174 reported in 2007.

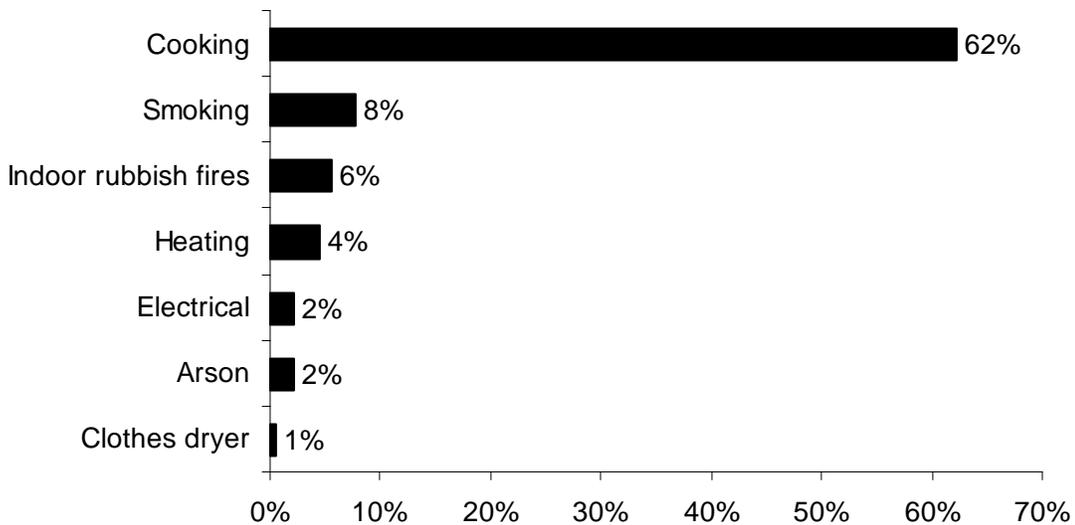

Apartments Accounted for Almost 2/3 of Residential Building Fires

The peak fixed property uses for residential building fires were apartments, accounting for 74% of the residential building fires in Fall River; 18% occurred in 1- or 2-family homes; 3% occurred in rooming houses; another 3% happened in residential board and care facilities; 1% occurred in dormitories; and 1% occurred in unclassified residential properties.

Unattended Cooking Leading Cause of Residential Fires

The leading cause of residential building fires in Fall River was unattended cooking and other unsafe cooking practices, accounting for 62% of these fires. Smoking accounted for 8% of fires in residential occupancies. Indoor rubbish fires accounted for 6% of these fires. Heating equipment caused 4%. Arson and electrical problems each caused 2% of these fires. Clothes dryers accounted for 1% of the fires in people’s homes in Fall River in 2008.

2008 Leading Causes of Fires in Fall River Homes

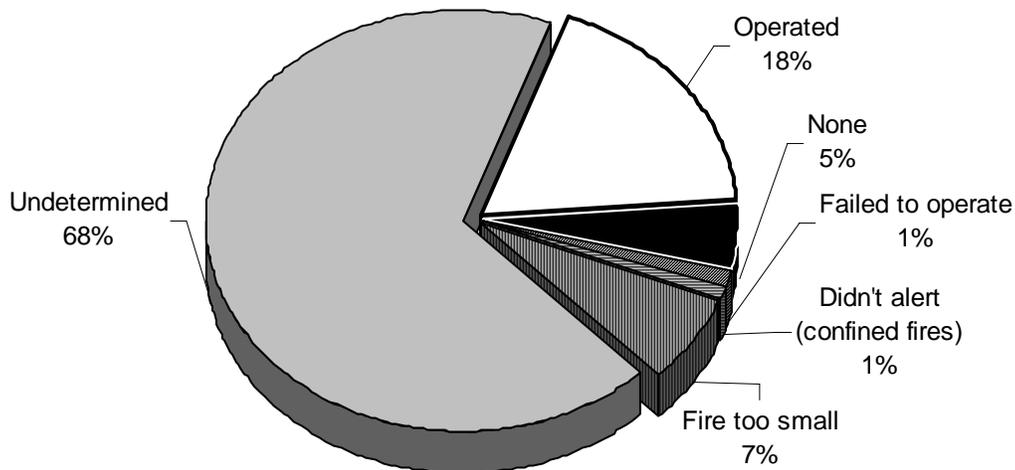

63% of Residential Building Fires Are Confined to Non-Combustible Containers¹

One hundred and thirteen (113), or 63% of all residential building fires were confined to non-combustible containers in 2008. Ninety-nine (99), or 55%, of all residential building fires reported in 2008 were cooking fires contained to a non-combustible container. Ten (10), or 6%, of these fires were rubbish fires contained to a non-combustible container. Four (4), or 2%, were fires confined to a fuel burner or boiler malfunction.

Detectors Operation Undetermined in Over 2/3 of Fires

Smoke or heat detectors operated and alerted the occupants in 33, or 18%, of the residential building fires. In 1% of these fires², the detectors did not alert the occupants. Detectors were present but did not operate in 1% of these incidents. In 5% of these fires, no detectors were present at all. The fire was too small to trigger the detector in 7% of the residential fires. Smoke detector performance was undetermined in 122 incidents, or 68% of Fall River's residential building fires.

Detector Status in Fall River's Residential Fires 2008

The lack of data on smoke detector performance in confined fires does not present a true picture of functioning smoke alarms in Fall River. Improved collection of data on whether or not the smoke alarms alerted the occupants to the fire would provide a better understanding of this issue.

¹ In MFIRS v5 a fire in a building contained to a non-combustible container (Incident Type = 113-118) does not have to have a Fire Module completed. Therefore the following data fields do not need to be completed: Area of Origin, Detector Status, Item First Ignited, Heat Source, Factors Contributing to Ignition, Cause of Ignition, and Equipment Involved In Ignition. These incidents are not included in the analysis of these fields.

² These represent confined fires where it was reported that the detector did not alert the occupants.

1 of 2 Detectors Failed Because of a Dead Battery

There were two fires where smoke detectors were present but failed to operate. One (1), (50%) failed because the battery was dead. And the reason for failure was undetermined in the other case (50%).

VACANT BUILDING FIRES**3% of Building Fires Occurred in Vacant Buildings**

Fall River reported eight fires that occurred in buildings that were vacant, under construction or demolition³. This represented 3% of the total 231 building fires reported to MFIRS in 2008. Four (4) apartment buildings, one storage facility, one outbuilding or shed, one construction site, and one unclassified building were reported as vacant building fire incidents.

JUVENILE-SET FIRES

There were two juvenile-set fires in Fall River in 2008, including one brush fire and one natural vegetation fire.

ARSONS**20 Total Arsons⁴ — 7 Structures, 3 Motor Vehicles, & 10 Other**

Twenty (20), or 3%, of Fall River's 472 fires were considered intentionally set, or, for purposes of this analysis, arson. The seven structure arsons, three motor vehicle arsons and 10 outside and other arsons caused two civilian injuries and an estimated dollar loss of \$15,000.

All Arsons Down

The total number of arsons decreased by 15 from 35 in 2007. Reported structure arsons decreased by six from the 13 reported the year before. Motor vehicle arsons decreased by one from the four reported the previous year. Outside and other arsons decreased by eight from the 18 reported in 2007.

ALL INCIDENTS**False Alarm & False Calls Are 41% of All Reported Incidents**

In 2008, Fall River voluntarily reported 4,567 incidents to MFIRS. Of these 4,567 incidents, 3,945, or 86%, were non-fire incidents.

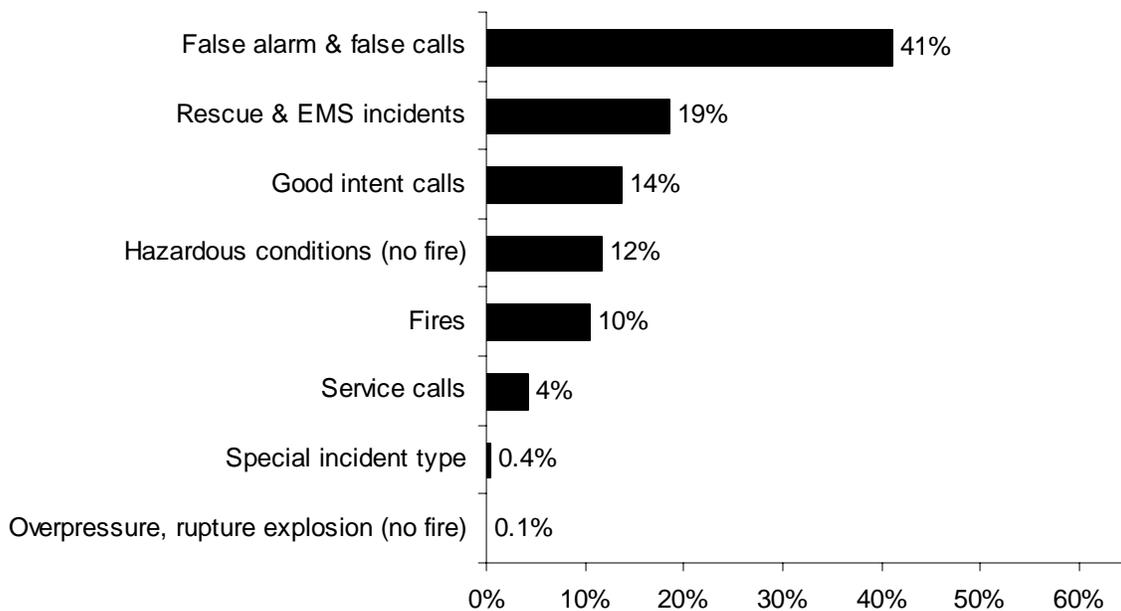

³ In version 4 a vacant building was defined by having a Fixed Property Use code in the subsection of construction, unoccupied properties, between 940 & 949. However in version 5, the Property Use is separate from the Building Status. In v5 a building is considered vacant if the Building Status is coded: 1- Under Construction; 3-Idle, not routinely used; 4-Under major renovation; 5-Vacant, secured; 6-Vacant, unsecured; & 7-Being demolished. The building use is coded separately in the Property Use field.

⁴ In MFIRS v5 a fire is considered an arson if the Cause of Ignition = 1 (Intentional) and the Age of Person (Fire Module) is greater than 17 or if the field is blank; or if the Wildland Module is used, the Wildland Fire Cause = 7 (Incendiary) and the Age of the Person (Wildland Module) is greater than 17 or if the field is left blank.

Of these 3,945 non-fire incidents 1,873, or 41% of all reported incidents in 2008, were reported false alarm or false calls; 850, or 19%, were reported rescue and emergency medical services (EMS) calls; 622, or 14%, were reported good intent calls; 536, or 12%, were reported hazardous condition calls with no fire; 189, or 4%, were reported service calls such as lock-outs, water or smoke problem, unauthorized burning or public service assistance; 17, or 0.4%, were special incident type calls; and six, or 0.1%, were reported overpressure, rupture, explosion or overheat calls with no fire.

In 2008, Fall River reported 474 fires⁵, accounting for 10% of all reported incidents.

2008 Incidents by Incident Type

Fall River Gave Mutual Aid in 6 Reported Incidents

In 2008, Fall River reported coming to the aid of other fire departments six times. Two (2) were for fires. Another two were for cover assignments; one was for a search for someone in the water, and the other was incident was cancelled en route.

Fall River Received Mutual Aid 7 Times

In 2008, Fall River reported receiving mutual aid from surrounding fire departments seven times. Three (3) were for fires. Two (2) were for medical assists; one was for a motor vehicle accident with injuries and another call was for a carbon monoxide incident.

⁵ This figure includes the fires that Fall River responded to outside of their jurisdiction.

Item First Ignited⁸	%	Factor Contrib. to Ignition	%	%Unconfined⁹

⁸ This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

⁹ Some fields in version 5 allow for multiple entries. Therefore the number of entries may be greater than the actual number of incidents being analyzed. These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Factors Contributing to Ignition from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires.

¹⁰ This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

¹¹ These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Cause of Ignition from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires.

¹² This figure includes the 4 fires that Fall River responded to outside of their jurisdiction.

New Bedford Fires in 2008

453 Total Fires —165 Structures, 65 Vehicles & 223 Other Fires

The New Bedford Fire Department reported 453 fires to the Massachusetts Fire Incident Reporting System (MFIRS) in 2008. The 165 structure fires, 65 motor vehicle fires, 134 outside trash fires, 66 brush fires, 19 special outside fires, one cultivated vegetation or crop fire, and three unclassified fires caused two civilian deaths, four civilian injuries, six fire service injuries, and an estimated dollar loss of \$4 million.

2 New Bedford Residents Die in 2 Smoking Fires

- On March 20, 2008, at 12:38 p.m., the New Bedford Fire Department was called to a fatal smoking fire in a single-family home. The victim, an 85-year old man, fell asleep while smoking in a living room chair. The victim did awaken and attempted to escape. He died from smoke inhalation and the burns sustained in the fire. Detectors were present but it was undetermined if they operated. No one else was injured in this fire. Damages from this fire were estimated to be \$70,000.
- On December 16, 2008, at 9:46 a.m., the New Bedford Fire Department was called to a fatal smoking fire in a single-family home. The fire began in a first floor bedroom. The victim, a 68-year old man fell asleep while smoking. He was on prescription medication that decreased his level of consciousness and ability to respond to the fire. The victim was the only thing that burned. There were no other injuries associated with this fire. Smoke detectors and sprinklers were not present. No estimation of the damages was made for this fire.

Structure & Outside & Other Fires are Up

Total fires increased by 27 from the 426 reported in 2007. Reported structure fires increased by 24 from the 141 reported during the previous year. Motor vehicle fires dropped 11 from 76 the year before. Outside and other fires increased by 14 from 209 the previous year.

NEW BEDFORD FIRES FROM 2004 TO 2008

	Total Fires	Structure Fires	Vehicle Fires	Other Fires	Total Arsons	Structure Arsons	Vehicle Arsons	Other Arsons
2004	366	133	84	149	35	13	11	11
2005	432	153	102	177	20	5	8	7
2006	378	138	86	154	32	8	21	3
2007	426	141	76	209	29	11	14	4
2008	453	165	65	223	47	16	14	17

Building Fires

There were 164 building fires of different types in New Bedford in 2008. These 164 building fires accounted for 99.4% of all structure fires in New Bedford.

83% of Building Fires in Homes

The 164 building fires that occurred in New Bedford in 2008 can be broken down by fixed property use as follows: 134, or 83% of all building fires, were in residential properties; seven fires took place in mercantile or business properties; six fires happened in manufacturing and processing facilities; five fires occurred in public assembly properties; three fires each occurred in educational, storage and institutional properties; and three fires occurred in unclassified properties in 2008.

RESIDENTIAL FIRES

Apartments Accounted for 60% of Residential Building Fires

The peak fixed property uses for residential building fires were apartments, accounting for 60% of the building fires in New Bedford; 37% occurred in 1- or 2-family homes; 1% occurred in residential board and care facilities; another 1% occurred each in rooming houses; and 1% occurred in unclassified residential buildings.

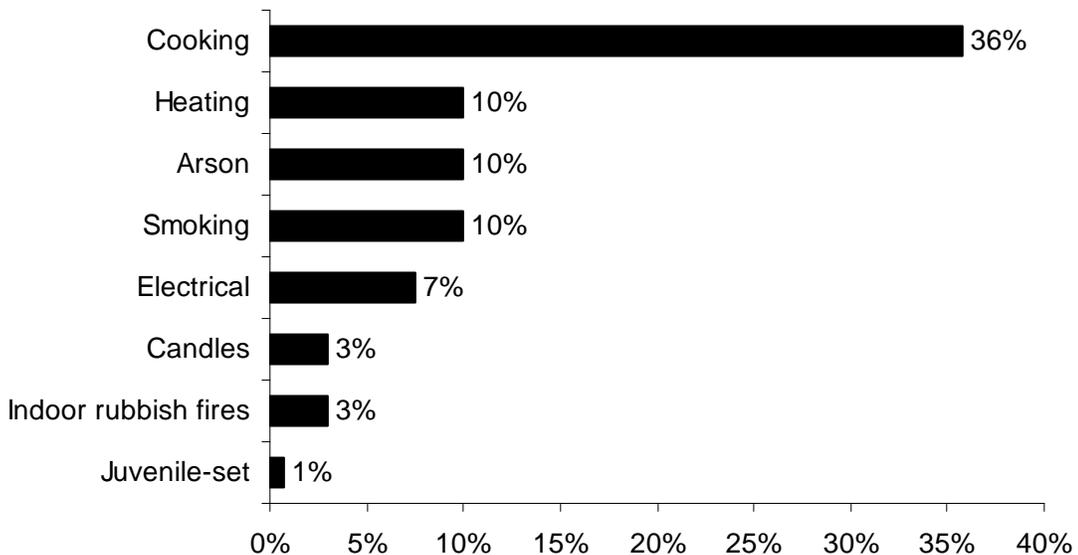

Residential Building Fires Are Up

There were 134 reported residential building fires in New Bedford in 2008. These 134 fires are an increase of 25, or 23%, from the 109 residential building fires reported in 2007.

Unattended Cooking Leading Cause of Residential Fires

The leading cause of residential building fires in New Bedford was unattended cooking and other unsafe cooking practices, accounting for 36% of these fires. Heating problems accounted for 10% of residential fires. Arson and smoking each caused 10% of the fires in New Bedford homes. Electrical problems accounted for 7% of these fires. Candles and indoor rubbish fires each caused 3% of these fires. Juvenile-set fires accounted for 1% of the residential building fires in New Bedford in 2008.

2008 Leading Causes of Fires in New Bedford Homes

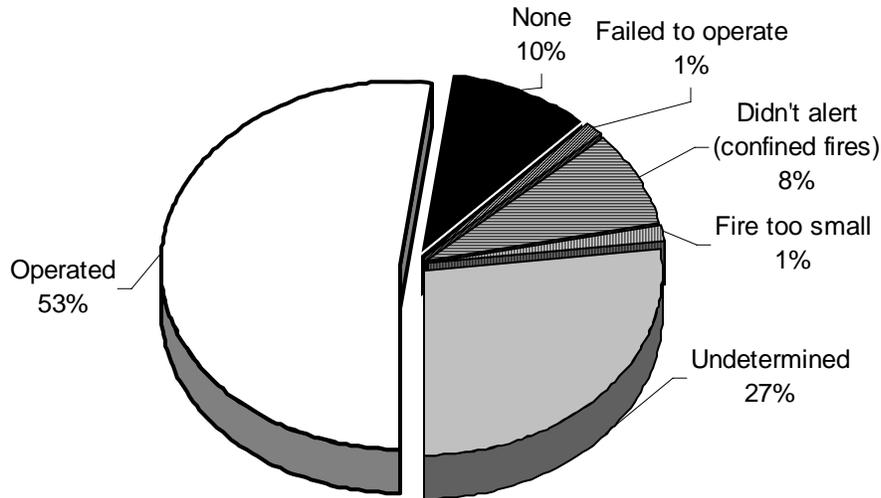

40% of Residential Building Fires Are Confined to Non-Combustible Containers¹

Fifty-four (54), or 40% of all residential building fires were confined to non-combustible containers in 2008. Forty-one (41), or 31%, of all residential building fires reported in 2008 were cooking fires contained to a non-combustible container. Five (5) of the reported fires were fuel burner or boiler malfunctions, accounting for 4% of residential building fires in New Bedford in 2008. Four (4), or 3%, of these fires were rubbish fires contained to a non-combustible container. Another four of the reported fires were confined to a chimney or flue, accounting for 3% of residential building fires in New Bedford in 2008.

Detectors Alerted Occupants in Over 1/2 of Fires

Smoke or heat detectors operated and alerted the occupants in 70, or 53%, of the residential building fires. In 8% of these fires², the detectors did not alert the occupants. Detectors were present but did not operate in 1% of these incidents. In 10% of these fires, no detectors were present at all. The fire was too small to trigger the detector in 1% of the residential fires. Smoke detector performance was undetermined in 36 incidents, or 27% of New Bedford’s residential building fires.

Detector Status in New Bedford's Residential Fires 2008

¹ In MFIRS v5 a fire in a building contained to a non-combustible container (Incident Type = 113-118) does not have to have a Fire Module completed. Therefore the following data fields do not need to be completed: Area of Origin, Detector Status, Item First Ignited, Heat Source, Factors Contributing to Ignition, Cause of Ignition, and Equipment Involved In Ignition. These incidents are not included in the analysis of these fields.

² These represent confined fires where it was reported that the detector did not alert the occupants.

1 of 2 Detectors Failed Detectors From a Missing or Disconnected Battery

Of the two fires where smoke detectors were present but failed to operate, one, or 50%, of these detectors failed because it had a missing or disconnected battery. It was undetermined in the other cases, or 50%, why the detectors failed to operate.

VACANT BUILDINGS

10% of Building Fires Occurred in Vacant Buildings

New Bedford reported 16 fires that occurred in buildings that were vacant, under construction or demolition³. This represented 10% of the total 164 building fires reported to MFIRS in 2008. Six (6) fires in apartment buildings, another six fires in one- or two-family homes; and one fire each in a high, junior high, or middle school, a business, an eating or drinking establishment, and an unclassified property occurred in vacant buildings.

JUVENILE-SET FIRES

1 Juvenile-set Fire

There was one juvenile-set fire in New Bedford in 2008. The one structure fire caused one civilian injury and \$500 in estimated damages.

ARSONS

47 Total Arsons⁴ — 16 Structures, 14 Motor Vehicles & 17 Other

Forty-seven (47), or 10%, of New Bedford's 453 fires were intentional, or for purposes of this analysis, arson. The 16 structure arsons, 14 motor vehicle arsons and 17 outside and other arsons caused four fire service injuries and an estimated dollar loss of \$1.3 million.

All Arsons Are Up

The total number of arsons increased by 18 from the 29 reported in 2007. Reported structure arsons increased by five from 11 the year before. Motor vehicle arsons remained the same with 14 reported in both 2008 and 2007. Outside and other arsons increased by 13 from the four reported last year.

³ In version 4 a vacant building was defined by having a Fixed Property Use code in the subsection of construction, unoccupied properties, between 910 & 919. However in version 5, the Property Use is separate from the Building Status. In v5 a building is considered vacant if the Building Status is coded: 1- Under Construction; 3-Idle, not routinely used; 4-Under major renovation; 5-Vacant, secured; 6-Vacant, unsecured; & 7-Being demolished. The building use is coded separately in the Property Use field.

⁴ In MFIRS v5 a fire is considered an arson if the Cause of Ignition = 1 (Intentional) and the Age of Person (Fire Module) is greater than 17 or if the field is blank; or if the Wildland Module is used, the Wildland Fire Cause = 7 (Incendiary) and the Age of the Person (Wildland Module) is greater than 17 or if the field is left blank.

ALL INCIDENTS

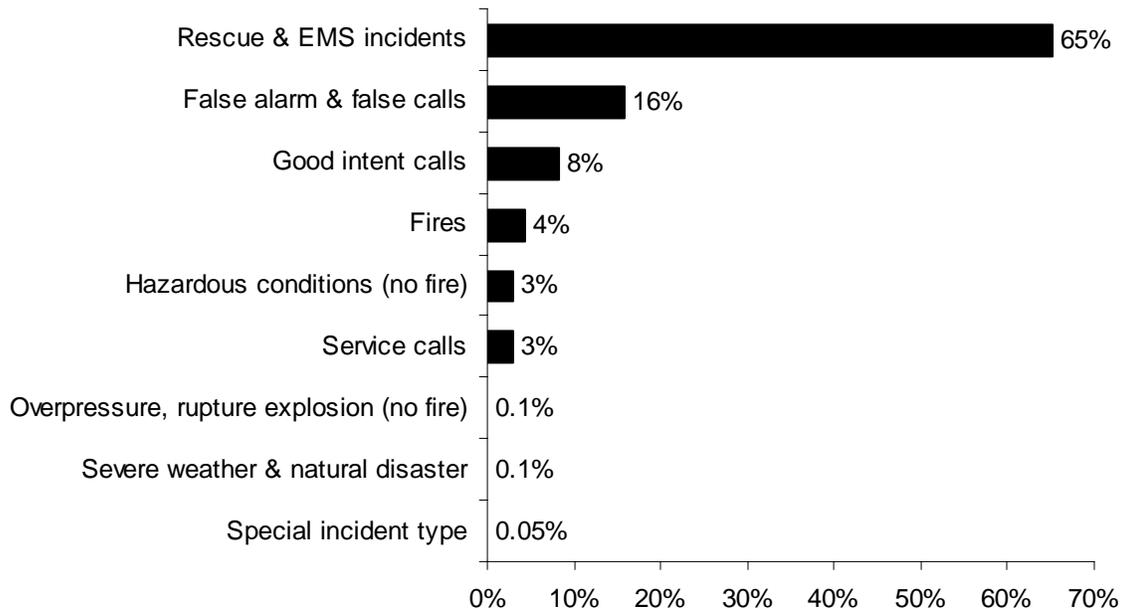

Rescue & EMS Calls Were Almost 2/3 of All Reported Incidents

In 2008, New Bedford voluntarily reported 10,284 incidents to MFIRS. Of these 10,284 incidents, 9,831, or 96%, were non-fire incidents.

Of these 9,831 non-fire incidents 6,694, or 65% of all reported incidents in 2008, were reported rescue and emergency medical services (EMS) calls; 1,633, or 16%, were reported false alarm or false calls; 846, or 8%, were reported good intent calls; 326, or 3%, were reported hazardous condition calls with no fire; 304, or 3%, were reported service calls such as lock-outs, water or smoke problem, unauthorized burning or public service assistance; 15, or 0.1%, were reported overpressure, rupture, explosion or overheat calls with no fire; eight, or 0.1%, were severe weather calls; and five, or 0.05%, were special incident type calls such as citizen complaints.

In 2008, New Bedford reported 453 fires⁵, accounting for 4% of all reported incidents.

2008 Incidents by Incident Type

New Bedford Gave Mutual Aid in 7 Reported Incidents

In 2008, New Bedford reported coming to the aid of other fire departments seven times. Of these seven incidents, five were for rescue or EMS calls, one was for a service call, and the other call was a special incident call.

⁵ This figure includes mutual aid fires that New Bedford responded to outside of their jurisdiction.

New Bedford Received Mutual Aid in 30 Incidents

In 2008, New Bedford reported receiving aid from surrounding fire departments 30 times. Twenty-one (21) of these incidents were rescue or EMS calls, three were good intent calls, two were false alarm or false calls, another two were service calls, one was for a fire, and the other one was a hazardous condition call with no fire.

Dukes County Fires 208

2008 Fires

Dukes County Fires in 2008

19 Total Fires — 12 Structures, 3 Motor Vehicle Fires, 4 Other Fires

Dukes County ranked last out of the fourteen Massachusetts counties in total fires. Dukes County Fire Departments reported 19 fires to the Massachusetts Fire Incident Reporting System (MFIRS) in 2008. The 12 structure fires, three motor vehicle fires, three brush, tree or lawn fires, and one outside trash fire caused an estimated dollar loss of \$651,500. There were no fire-related deaths in Dukes County in 2008. Dukes County's fires accounted for 0.1% of the 30,136 Massachusetts fires reported in 2008.

All seven of the fire departments in Dukes County either reported incidents to the Massachusetts Fire Incident Reporting System (MFIRS) or certified that they had no reportable fires in 2008.

Structure & Outside Fires Down

The total number of reported fire incidents decreased by 16 from the 35 reported in 2007. Reported structure fires decreased by 10 from the 22 reported in 2007. Motor vehicle fires remained the same with three fires reported in both 2007 and 2008. Outside and other fires decreased by six from the 10 reported in 2007.

Dukes County is an island community with a small year round population. During the summer months, the population increases immensely. Consequently, half of Duke County's reported fires occurred during the months June to August.

DUKES COUNTY FIRES FROM 2004 TO 2008

Year	Total Fires	Structure Fires	Vehicle Fires	Other Fires	Total Arsons	Structure Arsons	Vehicle Arsons	Other Arsons
2004	21	14	4	3	0	0	0	0
2005	40	17	12	13	1	0	0	1
2006	38	18	7	13	2	0	0	2
2007	35	22	3	10	0	0	0	0
2008	19	12	3	4	0	0	0	0

Fire and Fire Death Rates

Dukes County had 1.2 fires per 1,000 population. That figure ranks Dukes County last in the state and below the state rate of 4.8 fires per 1,000 population. Dukes County also had 0 fire deaths per 10,000 population tying it ranked for twelfth among Massachusetts counties and below the state rate of 0.08 fire deaths per 10,000 population.

Edgartown Had Dukes County Largest Loss Fire

- On April 30, 2008, at 4:54 a.m., the Edgartown Fire Department was dispatched to an electrical fire at a single-family home. An unspecified short-circuit in the garage started the fire. There were no injuries associated with this fire. Detectors were present and but failed to operate because of a missing battery. The building did not have sprinklers and damages from this fire were estimated to be \$435,000.

STRUCTURE FIRES

Reported Structure Fires Down

The 12 structure fires caused an estimated dollar loss of \$651,500. These incidents represented 63% of Dukes County's reported fires in 2008, and 100% of the county's reported dollar loss. The average estimated dollar loss per structure fire was \$54,292. The total number of reported structure fires decreased by 10, or 45%, from the 22 reported in 2007.

Arson Caused of 2% of Structure Fires

There were no reported structure arsons in Dukes County in 2008. The last reported structure arson in Dukes County occurred in 2003.

BUILDING FIRES

There were 12 building fires of different types in Dukes County in 2008. These 12 building fires accounted for all of the structure fires in Dukes County.

83% of Dukes Building Fires Occurred in People's Homes

Ten (10), or 83%, of Dukes County's 12 building fires occurred in residential occupancies. Mercantile and business properties had one fires; and another fire occurred at a restaurant.

RESIDENTIAL FIRES

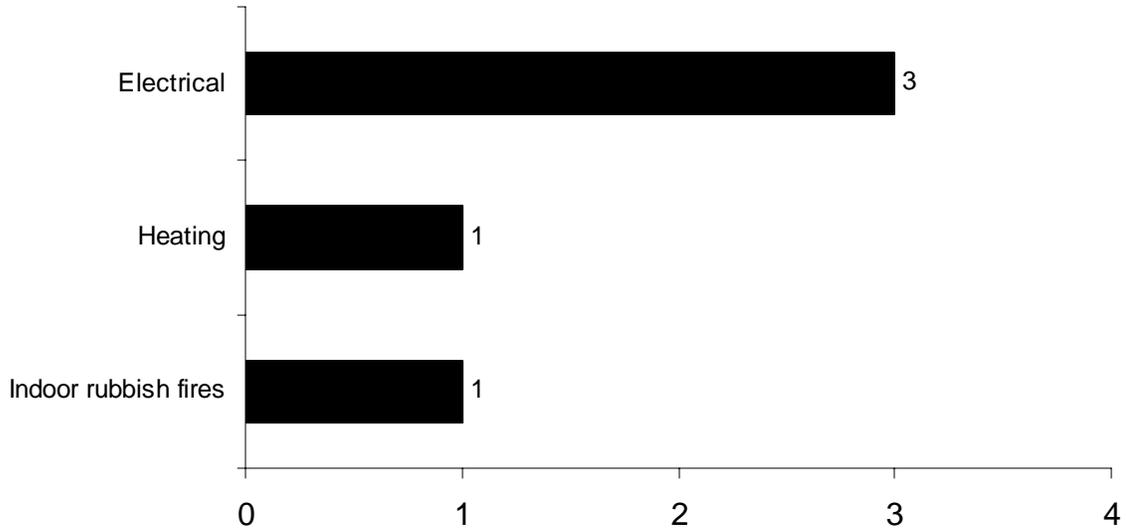

Residential Building Fires Down

There were 10 reported residential building fires in Dukes County in 2008. These 10 fires are a decrease of seven, or 41%, from the 17 residential building fires reported in 2007.

Electrical Problems Was the Leading Known Causes of Residential Fires

Electrical problems were the leading cause of residential building fires in Dukes County, accounting for three, or 33%, of these fires. Heating equipment caused one of the residential building fires in Dukes County in 2008, accounting for 11% of the fires. An indoor rubbish fire was each responsible for 11%, of the fires in Dukes County in 2008.

2008 Leading Causes of Fires in Dukes County Homes

None of Residential Building Fires Are Confined to Non-Combustible Containers¹

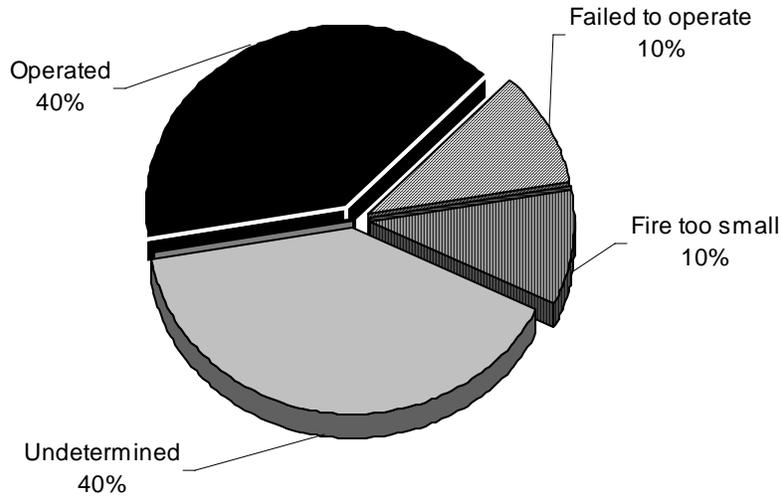

None of the reported fires in Dukes County were confined to a non-combustible container.

Detectors Alerted Occupants in 40% of Fires

Smoke or heat detectors operated and alerted the occupants in four, or 40%, of the residential building fires. Detectors were present but did not operate in one, or 10% of these incidents. In another fire, or 10% the fire was too small to activate the detector. Smoke detector performance was undetermined in four incidents, or 40% of Dukes County's residential building fires.

¹ In MFIRS v5 a fire in a building contained to a non-combustible container (Incident Type = 113-118) does not have to have a Fire Module completed. Therefore the following data fields do not need to be completed: Area of Origin, Detector Status, Item First Ignited, Heat Source, Factors Contributing to Ignition, Cause of Ignition, and Equipment Involved In Ignition. These incidents are not included in the analysis of these fields.

Detector Status in Dukes County's Residential Fires 2008

1 Detector Failed to Operate Because of a Missing Battery

One detector failed to operate because its battery was missing.

VACANT BUILDINGS

36% of Building Fires Occurred in Vacant Buildings

Dukes County reported four fires that occurred in a building that were vacant, under construction or demolition². This represented 36% of the total 11 building fires reported to MFIRS in 2008. The fires all occurred in residences.

None of the vacant building fires in Dukes County in 2008 were determined to be intentionally set.

JUVENILE-SET FIRES

No Juvenile-set Fires

There were no reported juvenile-set fires in Dukes County in 2008.

² In version 4 a vacant building was defined by having a Fixed Property Use code in the subsection of construction, unoccupied properties, between 910 & 919. However in version 5, the Property Use is separate from the Building Status. In v5 a building is considered vacant if the Building Status is coded: 1- Under Construction; 3-Idle, not routinely used; 4-Under major renovation; 5-Vacant, secured; 6-Vacant, unsecured; & 7-Being demolished. The building use is coded separately in the Property Use field.

ARSONS

No Arsons

For the second year in a row, there were no reportable arsons in Dukes County.

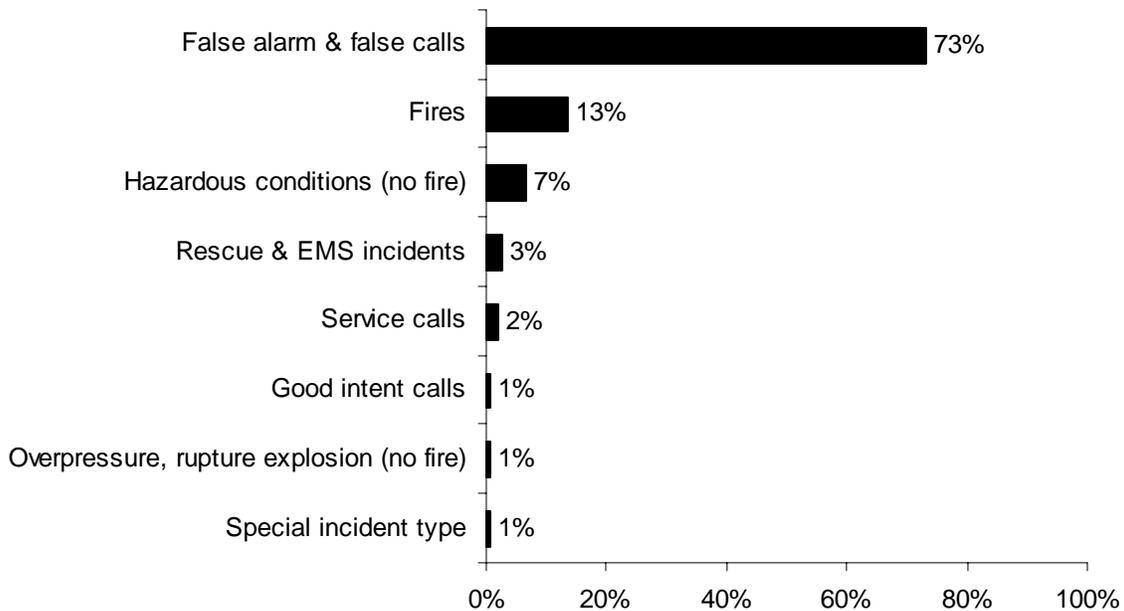

ALL INCIDENTS

False Alarms Almost 3/4 of All Reported Responses

In 2008, Dukes County fire departments reported 149 responses³ to MFIRS. Of these 149 incidents, 129 non-fire calls were voluntarily reported.

Of these 129 non-fire calls 109, or 73%, were reported false alarm or false calls; 10, or 7%, were reported hazardous condition calls with no fire; four, or 3% of all of the responses reported in 2008, were reported rescue and emergency medical services (EMS) calls; two, or 2%, were reported service calls such as lock-outs, water or smoke problems, unauthorized burning or public service assistance; one, or 1%, was a reported good intent call; one, or 1%, was a reported overpressure, rupture, explosion or overheat calls with no fire; and one, or 1% was a special incident type.

2008 Incidents by Incident Type

Twenty (20), or 13%, of the total incidents submitted by Dukes County fire departments were fires.

³ These figures include responses in which Dukes County fire departments gave mutual aid to other fire departments.

Dukes County Fire Departments Gave Mutual Aid 6 Times

In 2008, Dukes County fire departments reported coming to the aid of other fire departments six times. Of these six responses, five, or 83%, were for false alarms or false calls; and one, or 17%, was for a fire.

Dukes County Fire Departments Received Mutual Aid in 5 Incidents

In 2008, Dukes County fire departments reported receiving aid from surrounding departments in five incidents. All five of these incidents were for fires.

Essex County Fires 2008

2008 Fires

Essex County Fires in 2008

2,887 Total Fires — 1,628 Structures, 326 Vehicles & 933 Other Fires

Essex County ranked fifth out of the fourteen Massachusetts counties in total reported fires. The county reported 2,887 fires to the Massachusetts Fire Incident Reporting System (MFIRS) in 2008. The 1,628 structure fires, 326 motor vehicle fires, 586 brush, tree or lawn fires, 203 outside rubbish fires, 68 special outside fires, six cultivated crop or vegetation fires, and 70 other fires caused eight civilian deaths, 13 civilian injuries¹, 45 fire service injuries and an estimated dollar loss of \$25.6 million². Essex County's fires accounted for 10% of the 30,136 Massachusetts fires reported in 2008.

All 34 fire departments in Essex County either reported incidents to the Massachusetts Fire Incident Reporting System (MFIRS) or certified that they had no reportable fires in 2008.

All Fires Down

The total number of reported fire incidents decreased by 749 incidents from the 3,636 that were reported in 2007. Reported structure fires decreased by 66 from the 1,694 reported during the previous year. The total number of motor vehicle fires decreased by 14 from the 340 incidents reported during 2007. Reported outside and other fires decreased 669 from the 1,602 reported the year before.

Brush Fires Down by 39%

After a large increase in brush fires in 2007 by 514, or 115%, brush fires decreased by 376, or 39%, from the 962 reported in 2007. This is a major decrease and the main reason for the drop in all Norfolk County fires.

ESSEX COUNTY FIRES FROM 2004 TO 2008

Year	Total Fires	Structure Fires	Vehicle Fires	Other Fires	Total Arsons	Structure Arsons	Vehicle Arsons	Other Arsons
2004	3,055	1,738	383	934	146	25	14	107
2005	3,090	1,641	358	1,091	139	37	14	88
2006	2,875	1,443	343	1,089	107	27	12	68
2007	3,636	1,694	340	1,602	178	32	12	134
2008	2,887	1,628	326	933	134	21	17	96

Fire and Fire Death Rates

Essex County had 4.0 fires per 1,000 population. That figure ranks Essex County ninth in the state and below the state rate of 4.8 fires per 1,000 population. Essex County also had

¹ The Lawrence Fire Department reported only 1 civilian fire injuries in 2008.

² Essex County had 3 fires that reported a dollar loss greater than \$1 million. Peabody FD had one fire where the loss totaled \$6.8 million and another with \$1.5 million in losses. Beverly, reported one fire where the dollar loss was \$2 million.

0.11 fire deaths per 10,000 populations ranking it fourth among Massachusetts counties and above the state rate of 0.08 fire deaths per 10,000 population.

5 Fatal Fires Killed 8 Essex County Civilians

- On January 16, 2008 at 2:37 p.m., the Danvers Fire Department was called to a fatal electrical fire in a two-family home. Electrical arcing inside a wall started the fire. The victims, a 52-year old woman and her 53-year old husband, were overcome by heat and smoke. One firefighter was injured at this fire. Detectors were present but failed to operate because of a lack of cleaning. Sprinklers were not present. Damages from this fire were estimated to be \$75,000.
- On February 14, 2008 at 7:24 p.m., the Lawrence Fire Department was called to a fatal smoking fire in a three-unit apartment building. The victim, a 55-year old man, fell asleep while smoking. There were no other injuries associated with this fire. Smoke detectors were present and operated. Sprinklers were not present. Damages from this fire were estimated to be \$350,000.
- On May 15, 2008, at 12:53 p.m., the Swampscott Fire Department was called to a fatal fire in a single-family home of undetermined cause. The fire started in the basement. It is believed that the victim, a 61-year old man, was refinishing furniture in the basement. The vapors from the refinishing liquids were ignited by one of the multiple heat sources nearby. While attempting to escape the fire he became incapacitated by the heat and smoke and fell, hitting his head, and knocking over a can of gasoline intensifying the fire around him. Three firefighters were injured fighting this fire. There were no smoke detectors or sprinklers in the home. Damages from this fire were estimated to be \$350,000.
- On November 3, 2008 at 11:51 p.m., the Lawrence Fire Department was called to a fatal electrical fire in a single-family home. The fire was caused by an unspecified short-circuit in the kitchen, either a baseboard heater or a nearby power strip malfunctioned. One of the victims, a 51-year old woman, initially escaped with her husband but reentered the building to rescue her 19-year old son. Both were overcome by heat and smoke. No one else was injured at this fire. It was
- On November 7, 2008 at 9:08 p.m., the Haverhill Fire District was called to a fatal fire in a single-family home of undetermined cause. The fire started in a third floor bedroom. The victims, a 6-year old boy and his 50-year old physically disabled aunt, were trapped by the fire and overcome by the heat and smoke. There were no other injuries associated with this fire. It was undetermined if detectors were present. There were no sprinklers. Damages from this fire were estimated to be \$60,000.

Peabody Has Essex County's Largest Loss Fire in 2008

- On May 29, 2008, at 3:52 p.m., the Peabody Fire Department was called to a smoking fire in 38-unit apartment building. A cigarette improperly discarded in the courtyard bark mulch started this fire. A nearby bank of natural gas meters failed and

contributed to the rapid spread of the fire. No one was injured at this fire. Smoke detectors were present but it was undetermined if they operated. Sprinklers were also present, but it was also undetermined if they operated. Damages were estimated to be \$6.8 million.

STRUCTURE FIRES

Reported Structure Fires Down

The 1,628 structure fires caused all eight of the civilian deaths, 12 civilian injuries, 43 fire service injuries and an estimated dollar loss of \$24.4 million. These incidents represented 56% of Essex County's reported fires in 2008. The average estimated dollar loss per structure fire was \$14,972. The total number of reported structure fires decreased by 66, or 4%, from the 1,694 reported in 2007.

Arson Caused of 1% of Structure Fires

The 21 structure arsons caused three fire service injuries and an estimated dollar loss of \$532,707. Arson was indicated as the cause of 1% of the structure fires and 2% of Essex County's structure fire dollar loss. The 21 structure arsons accounted for 16% of the Essex County arson fires reported in 2008. The total number of reported structure arsons decreased by 11 or 34%, from 32 in 2007.

62% of Structure Arsons Occurred in Residences

Sixty-two percent (62%), of Essex County's 21 structure arsons occurred in residential occupancies; 10% occurred each in public assembly properties, storage facilities and special properties; and institutional facilities and industrial facilities each accounted for 5% of the structure arsons in Essex County in 2008.

BUILDING FIRES

There were 1,617 building fires of different types in Essex County in 2008. These 1,617 building fires accounted for 99.3 % of all structure fires in Essex County.

81% of Essex Building Fires Occurred in People's Homes

One thousand three hundred and fifteen (1,315), or 81%, of Essex County's 1,617 building fires occurred in residential occupancies. Mercantile and business properties had 92 fires. Seventy-seven (77) fires took place in public assembly properties, including restaurants and churches. Hospitals, prisons, and other institutional buildings experienced 50 fires. Twenty-five (25) building fires in Essex County occurred in special properties such as outbuildings, bus stop shelters and telephone booths. Twenty (20) building fires took place on educational properties. Seventeen (17) fires took place in manufacturing and processing facilities. Fourteen (14) fires took place in storage properties. Five (5) fires happened in industrial facilities; and two fires occurred in unclassified properties in Essex County in 2008.

RESIDENTIAL FIRES

Residential Building Fires Down Slightly in 2008

There were 1,315 reported residential building fires in Essex County in 2008. These 1,315 fires are a decrease of 36, or 3%, from the 1,351 residential building fires reported in 2007.

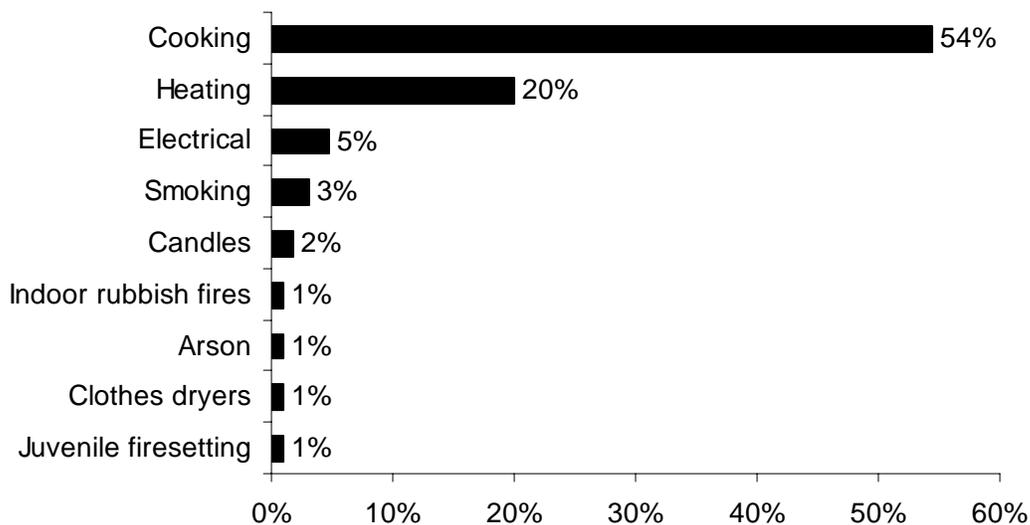

1- & 2-Family Homes Accounted for 1/2 of Residential Building Fires

The peak fixed property uses for residential building fires were 1- and 2-family homes, accounting for half, or 51%, of the building fires in Essex County; 32% occurred in apartments; 1% each happened in rooming houses, dormitories, residential board and care facilities and hotels or motels. Seventy-two (72), or 4% of the residential building fires in Essex County occurred in unclassified residential buildings.

Cooking Leading Cause of Residential Fires

The leading cause of residential building fires in Essex County was unattended cooking and other unsafe cooking practices, accounting for 54% of these fires. Heating was the second leading cause, accounting for 20% of these fires. Electrical problems caused 5% of residential building fires. Smoking caused 3% of these fires. Candles were the cause of 2% of residential fires. Indoor rubbish fires, arson, clothes dryers, and juvenile-set fire each caused 1% of the fires in people's' homes in Essex County in 2008.

2008 Leading Causes of Fires in Essex County Homes

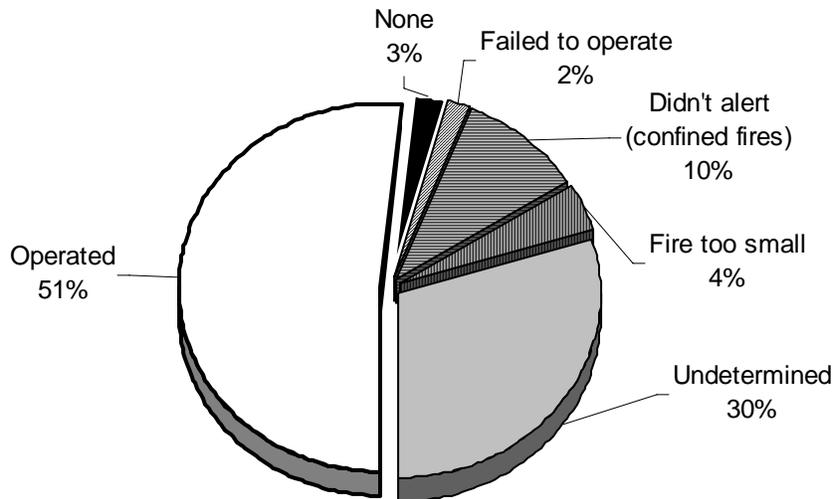

70% of Residential Building Fires Are Confined to Non-Combustible Containers³

Nine hundred and twenty-four (924), or 70% of all residential building fires were reported as confined to non-combustible containers in 2008. Six hundred and fifty-one (651), or 50%, of all residential building fires reported in 2008 were cooking fires contained to a non-combustible container. One hundred and forty-six (146), or 11%, were fires confined to a fuel burner or boiler malfunction. One hundred and six (106) of the reported fires were confined to a chimney accounting for 7% of residential building fires. Eighteen (18), or 1%, of these fires were rubbish fires contained to a non-combustible container. Two fires, or less than 1%, were incinerator overload or malfunctions; and one fire, or less than 1% of all residential fires, was confined to a commercial compactor.

Detectors Operated in Over 1/2 of Fires

Smoke or heat detectors operated and alerted the occupants in 679, or 51%, of the residential building fires. In 10% of these fires⁴, the detectors did not alert the occupants. Detectors were present but did not operate in 2% of these incidents. In 3% of these fires, no detectors were present at all. The fire was too small to trigger the detector in 4% of the residential fires. Smoke detector performance was undetermined in 392 incidents, or 30% of Essex County’s residential building fires.

Detector Status in Essex County's Residential Structure Fires 2008

³ In MFIRS v5 a fire in a building contained to a non-combustible container (Incident Type = 113-118) does not have to have a Fire Module completed. Therefore the following data fields do not need to be completed: Area of Origin, Detector Status, Item First Ignited, Heat Source, Factors Contributing to Ignition, Cause of Ignition, and Equipment Involved In Ignition. These incidents are not included in the analysis of these fields.

⁴ These represent confined fires where it was reported that the detector did not alert the occupants.

Almost 1/3 of Failed Detectors Had Missing or Disconnected Batteries

Of the 26 fires where smoke detectors were present but failed to operate, eight, or 31%, failed because the batteries were either missing or disconnected. Three (3), or 12%, failed because of a power failure, shutoff or disconnect. It was determined that another three detectors, or 12%, didn't work because of a lack of maintenance. One (1), or 4%, did not operate because of a dead battery. It was undetermined or unclassified in 11 cases, or 42%, why the detectors failed to operate.

VACANT BUILDINGS**2% of Building Fires Occurred in Vacant Buildings**

Essex County reported 39 fires that occurred in buildings that were vacant, under construction or demolition⁵. This represented 2% of the total 1,617 building fires reported to MFIRS in 2008. Nineteen (19) fires occurred in vacant residential properties. Public assembly properties and storage facilities each accounted for six vacant building fire incidents. Mercantile and business properties had five of these fires. Educational facilities, manufacturing or processing facilities and special properties each accounted for one vacant building fire in Essex County in 2008.

Three (3) of the vacant building fires in Essex County in 2008 were determined to be intentionally set. Two (2) single-family homes, two storage facilities and one detached residential garage were vacant building arsons.

JUVENILE-SET FIRES**13 Juvenile-set Fires**

There were 13 reported juvenile-set fires in Essex County in 2008. The 10 structure fires, two brush fires and one special outside fire caused \$477,050 in estimated damages.

ARSONS**134 Total Arsons⁶ — 21 Structures, 17 Vehicles & 96 Other Arsons**

One hundred and thirty-four (134), or 5%, of Essex County's 2,887 fires were considered intentionally set, or, for purposes of this analysis, arson. The 21 structure arsons, 17 motor vehicle arsons and 96 outside and other arsons caused one civilian injury, three fire service injuries and an estimated dollar loss of \$623,707.

⁵ In version 4 a vacant building was defined by having a Fixed Property Use code in the subsection of construction, unoccupied properties, between 910 & 919. However in version 5, the Property Use is separate from the Building Status. In v5 a building is considered vacant if the Building Status is coded: 1- Under Construction; 3-Idle, not routinely used; 4-Under major renovation; 5-Vacant, secured; 6-Vacant, unsecured; & 7-Being demolished. The building use is coded separately in the Property Use field.

⁶ In MFIRS v5 a fire is considered an arson if the Cause of Ignition = 1 (Intentional) and the Age of Person (Fire Module) is greater than 17 or if the field is blank; or if the Wildland Module is used, the Wildland Fire Cause = 7 (Incendiary) and the Age of the Person (Wildland Module) is greater than 17 or if the field is left blank.

Structure & Outside & Other Arsons Down

The total number of reported arson fires decreased by 44 from the 178 reported in 2007. Reported structure arsons decreased by 11 from the 32 reported the previous year. Motor vehicle arsons increased by five from the 12 reported in 2007. Outside and other arsons decreased by 38 from 134 reported the year before.

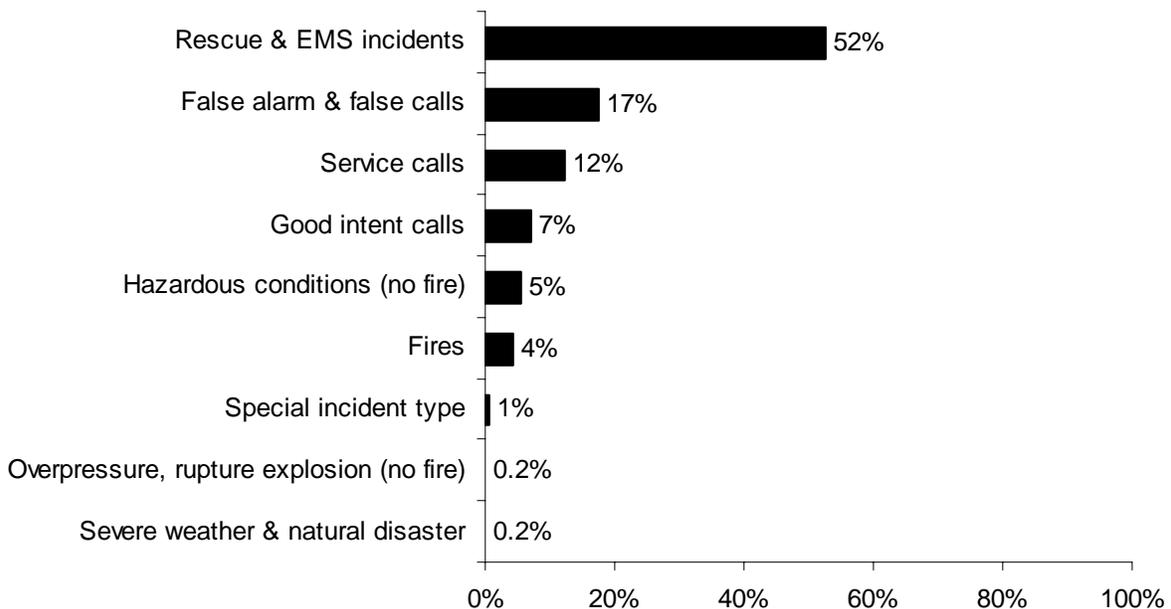

ALL INCIDENTS

Rescue & EMS Calls Are Over 1/2 of All Reported Responses

In 2008, fire departments in Essex County reported 71,424 responses⁷ to MFIRS. Of these 71,424 incidents, 68,431 non-fire calls were voluntarily reported.

Of these 68,431 non-fire calls, 37,489, or 52% of all the reported responses in 2008, were reported rescue and emergency medical services (EMS) calls; 12,468, or 17%, were reported false alarm or false calls; 8,865, or 12%, were reported service calls such as lock-outs, water or smoke problems, unauthorized burning or public service assistance; 5,000 or 7%, were reported good intent calls; 3,922, or 5%, were reported hazardous condition calls with no fire; 437, or 1%, were special incident type calls such as citizen complaints; 131, or 0.2%, were reported overpressure, rupture, explosion or overheat calls with no fire ; and 119, or 0.2%, were severe weather responses.

2008 Responses by Incident Type

⁷ These figures include responses in which Essex County fire departments gave mutual aid to other fire departments.

Two thousand nine hundred and ninety-three (2,993), or 4%, of the total incidents submitted by Essex County fire departments were fires.

Essex County Fire Departments Reported Giving Mutual Aid 1,141 Times

In 2008, Essex County fire departments reported coming to the aid of other fire departments 1,141 times. Of these 1,141 responses, 443, or 39%, were for rescue or EMS calls; 364, or 32%, were for service calls such as cover assignments; 146, or 12%, were for good intent calls; 107, or 9%, were for fires; 64, or 6%, were for false alarms or false calls; 12, or 1%, were for hazardous conditions calls with no fire; three, or 0.3%, were special incident types; and two, or 0.2% were reported overpressure, rupture, explosion or overheat calls with no fire.

Essex County Received Mutual Aid in 1,238 Incidents

In 2008, Essex County fire departments reported receiving aid from surrounding departments in 1,238 incidents. Of these 1,238 incidents, 812, or 66%, were rescue and emergency medical services calls; 182, or 15%, were for fires; 131, or 11%, were false alarms or false calls; 43, or 3%, were good intent calls; 39, or 3%, were hazardous conditions calls with no fire; 22, or 2% were service calls; eight, or 1%, were reported overpressure, rupture, explosion or overheat calls with no fire; and one, or 0.1%, was for a severe weather or natural disaster call.

Haverhill Fires in 2008

311 Total Fires — 209 Structures, 8 Vehicles & 94 Other Fires

The Haverhill Fire Department reported 311 fires to the Massachusetts Fire Incident Reporting System (MFIRS) in 2008. The 209 structure fires, eight motor vehicle fires, 84 brush fires, seven special outside fires; and three unclassified fires caused two civilian deaths, two firefighter injuries and an estimated dollar loss of \$1.5 million.

Haverhill Aunt & Nephew Die in Apartment Fire

- On November 7, 2008 at 9:08 p.m., the Haverhill Fire District was called to a fatal fire in a single-family home of undetermined cause. The fire started in a third floor bedroom. The victims, a 6-year old boy and his 50-year old physically disabled aunt, were trapped by the fire and overcome by the heat and smoke. There were no other injuries associated with this fire. It was undetermined if detectors were present. There were no sprinklers. Damages from this fire were estimated to be \$60,000.

All Fires Down in 2008

Total fires decreased by 63 from the 374 incidents reported in 2007. Reported structure fires were down by 16 from the 225 reported during the previous year. Motor vehicle fires decreased by 17 from 25 the year before. Outside and other fires decreased by 30 from the 124 reported in 2007.

HAVERHILL FIRES FROM 2004 TO 2008

	Total Fires	Structure Fires	Vehicle Fires	Other Fires	Total Arsons	Structure Arsons	Vehicle Arsons	Other Arsons

2008	334	242	26	66	16	4	3	90

BUILDING FIRES

There were 208 building fires of different types in Haverhill in 2008. These 208 building fires accounted for 99.5% of all structure fires in Haverhill.

79% of Building Fires in Homes

The 208 building fires that occurred in Haverhill in 2008 can be broken down by fixed property use as follows: 164, or 79% of all building fires, were in residential properties; 14 fires occurred in public assembly properties; 10 happened in mercantile or business properties; six fires occurred in institutional facilities; five fires occurred in manufacturing or processing facilities; three fires occurred in educational facilities; another three fires happened in storage facilities; and three other fires occurred in special properties.

RESIDENTIAL FIRES

Residential Building Fires Down Slightly

There were 164 reported residential building fires in Haverhill in 2008. These 164 fires are a decrease of nine from the 173 reported residential building fires reported in 2007.

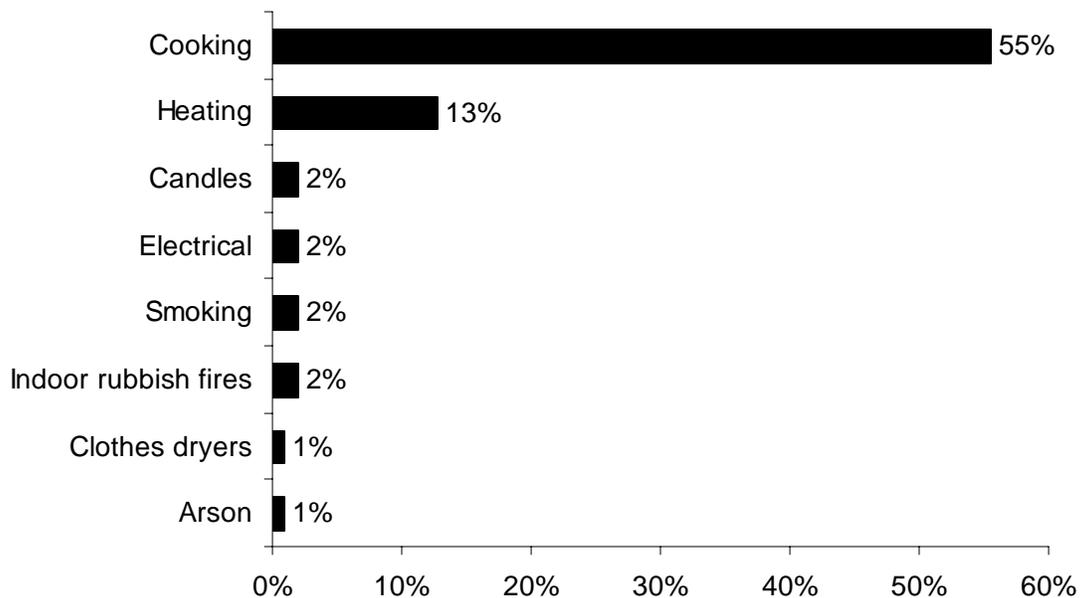

Apartments Accounted for 37% of Residential Building Fires

The peak fixed property uses for residential building fires were apartments, accounting for 37% of the building fires in Haverhill; 32% occurred in 1- or 2-family homes; and 2% each happened in rooming houses, residential board and care facilities and hotels and motels; and 26% occurred in unclassified residences.

Unattended Cooking Leading Cause of Residential Fires

The leading cause of residential building fires in Haverhill was unattended cooking and other unsafe cooking practices, accounting 55% of these fires. Heating fires caused 13% of these fires. Candles, electrical problems, smoking and indoor rubbish fires each caused 2% of the fires. Clothes dryers and arsons were each the cause of 1% of the fires in Haverhill's residential occupancies in 2008.

2008 Leading Causes of Fires in Haverhill Homes

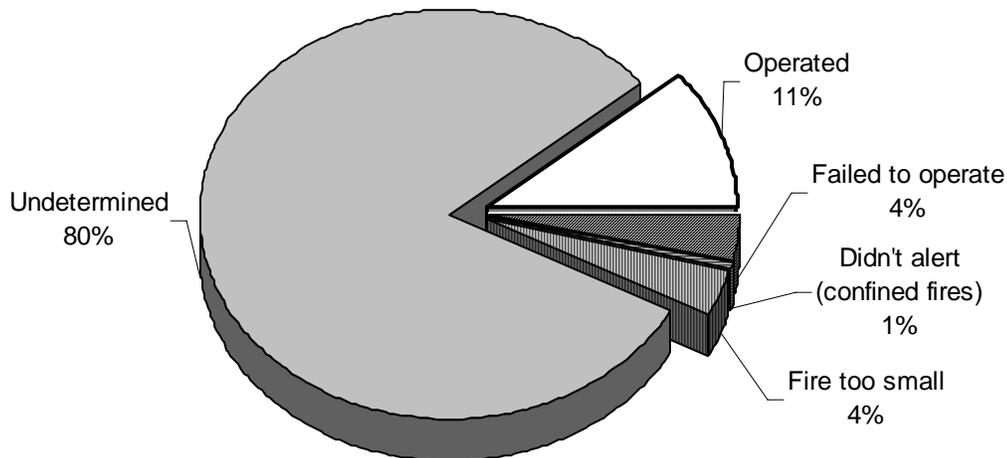

68% of Residential Building Fires Are Confined to Non-Combustible Containers¹

One hundred and twelve (112), or 68% of all residential building fires were confined to non-combustible containers in 2008. Eighty-nine (89), or 54%, of all residential building fires reported in 2008 were cooking fires contained to a non-combustible container. Twelve (12) fires, or 7%, were reported to have been contained to a chimney or flue. Nine (9), or 7%, were fires confined to a fuel burner or boiler malfunction. Two (2), or 1%, of these fires were rubbish fires contained to a non-combustible container.

Detectors Worked in Only 11% of Fires

Smoke or heat detectors operated and alerted the occupants in 18, or 11%, of the residential building fires. In 1% of these fires², the detectors did not alert the occupants. Detectors were present but did not operate in 4% of these incidents. The fire was too small to trigger the detector in 4% of these fires. Smoke detector performance was undetermined in 133 incidents, or 80% of Haverhill's residential building fires.

Detector Status in Haverhill's Residential Fires 2008

The lack of data on smoke detector performance in confined fires does not present a true picture of functioning smoke alarms in Haverhill. Improved collection of data on whether or not the smoke alarms alerted the occupants to the fire would provide a better understanding of this issue.

¹ In MFIRS v5 a fire in a building contained to a non-combustible container (Incident Type = 113-118) does not have to have a Fire Module completed. Therefore the following data fields do not need to be completed: Area of Origin, Detector Status, Item First Ignited, Heat Source, Factors Contributing to Ignition, Cause of Ignition, and Equipment Involved In Ignition. These incidents are not included in the analysis of these fields.

² These represent confined fires where it was reported that the detector did not alert the occupants.

1/3 of Detectors Failed Detectors From Missing Batteries

Of the three fires where smoke detectors were present but failed to operate, two, or 33%, failed because it had a missing or disconnected battery. It was undetermined in four cases, or 67%, why the detectors failed to operate.

VACANT BUILDINGS**3% of Building Fires Occurred in Vacant Buildings**

Haverhill reported six fires that occurred in buildings that were vacant, under construction or demolition³. This represented 3% of the total 208 building fires reported to MFIRS in 2008. Two (2) apartment buildings, one 1- or 2-family home, one church, mosque or synagogue, one outbuilding or protective shelter, and one unclassified storage facility were reported as vacant building fire incidents.

JUVENILE-SET FIRES**No Juvenile-set Fires in 2008**

There were no reported juvenile-set fires in Haverhill in 2008.

ARSONS**52 Arsons⁴ - 2 Structure, 0 Motor Vehicle and 50 Outside & Other**

Fifty-two (52), or 17%, of Haverhill's 311 fires were considered intentionally set, or, for purposes of this analysis, arson. There were two structure arsons and 50 outside and other arsons.

All Arsons Down in 2008

The total number of arsons decreased by 34 from the 29 reported in 2007. Reported structure arsons decreased by two from the four reported in 2007. For the third year in a row, there were no reported motor vehicle arsons in Haverhill. Outside and other arsons decreased by six from the 56 reported the year before.

43 Fires Reported as Undetermined or Still Under Investigation

In 2008, Haverhill reported 43 fires under investigation or cause undetermined after investigation. Fifteen (15), or 35%, of these fires were reported to be undetermined after investigation. The other 43, or 65%, were still under investigation.

³ In version 4 a vacant building was defined by having a Fixed Property Use code in the subsection of construction, unoccupied properties, between 910 & 919. However in version 5, the Property Use is separate from the Building Status. In v5 a building is considered vacant if the Building Status is coded: 1- Under Construction; 3-Idle, not routinely used; 4-Under major renovation; 5-Vacant, secured; 6-Vacant, unsecured; & 7-Being demolished. The building use is coded separately in the Property Use field.

⁴ In MFIRS v5 a fire is considered an arson if the Cause of Ignition = 1 (Intentional) and the Age of Person (Fire Module) is greater than 17 or if the field is blank; or if the Wildland Module is used, the Wildland Fire Cause = 7 (Incendiary) and the Age of the Person (Wildland Module) is greater than 17 or if the field is left blank.

Twenty (20), or 47%, of these 43 fires were structure fires. Five (5), or 12% were motor vehicle fires; and 18, or 42%, were outside or other fires. Because so many fires or under investigation or undetermined after investigation, the true arson number might be actually higher in Haverhill in 2008.

⁷ This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

⁸ Some fields in version 5 allow for multiple entries. Therefore the number of entries may be greater than the actual number of incidents being analyzed. These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Factors Contributing to Ignition from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires.

⁹ This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

¹⁰ These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Cause of Ignition from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires.

Lawrence Fires in 2008

260 Total Fires — 136 Structures, 40 Vehicles & 81 Other Fires

The Lawrence Fire Department reported 260 fires to the Massachusetts Fire Incident Reporting System (MFIRS) in 2008. The 136 structure fires, 40 motor vehicle fires, 45 outside rubbish fires, 36 brush fires, and one unclassified fires caused three civilian deaths, one civilian injury, six fire service injuries and an estimated dollar loss of \$5 million.

3 Lawrence Residents Killed in 2 Fatal Fires

- On February 14, 2008 at 7:24 p.m., the Lawrence Fire Department was called to a fatal smoking fire in a three-unit apartment building. The victim, a 55-year old man, fell asleep while smoking. There were no other injuries associated with this fire. Smoke detectors were present and operated. Sprinklers were not present. Damages from this fire were estimated to be \$350,000.
- On November 3, 2008 at 11:51 p.m., the Lawrence Fire Department was called to a fatal electrical fire in a single-family home. The fire was caused by an unspecified short-circuit in the kitchen, either a baseboard heater or a nearby power strip malfunctioned. One of the victims, a 51-year old woman, initially escaped with her husband but reentered the building to rescue her 19-year old son. Both were overcome by heat and smoke. No one else was injured at this fire. It was undetermined if detectors were present. Sprinklers were not present. Damages from this fire were estimated to be \$175,000.

Motor Vehicle Fires Are Down

Total fires decreased by 22 from the 282 incidents reported in 2007. Reported structure fires increased by two from the 134 reported during the previous year. Motor vehicle fires decreased by 27 from 67 the year before. Outside and other fires increased by three from 81 in 2007.

LAWRENCE FIRES FROM 2004 TO 2008

	Total Fires	Structure Fires	Vehicle Fires	Other Fires	Total Arsons	Structure Arsons	Vehicle Arsons	Other Arsons

2008	260	136	40	84	11	5	5	1

BUILDING FIRES

There were 135 building fires of different types in Lawrence in 2008. These 135 building fires accounted for 99.3% of all structure fires in Lawrence.

80% of Building Fires in Homes

The 135 building fires that occurred in Lawrence in 2008 can be broken down by fixed property use as follows: 108, or 80% of all building fires, were in residential properties; seven fires happened in special properties; another seven fires occurred in mercantile or business properties; six fires occurred in public assembly properties; two fires occurred in manufacturing or processing facilities, and another two fires occurred in educational facilities.

RESIDENTIAL FIRES

Residential Building Fires Are Up Slightly

There were 108 reported residential building fires in Lawrence in 2008. These 108 fires are an increase of six, or 6%, from the 102 residential building fires reported in 2007.

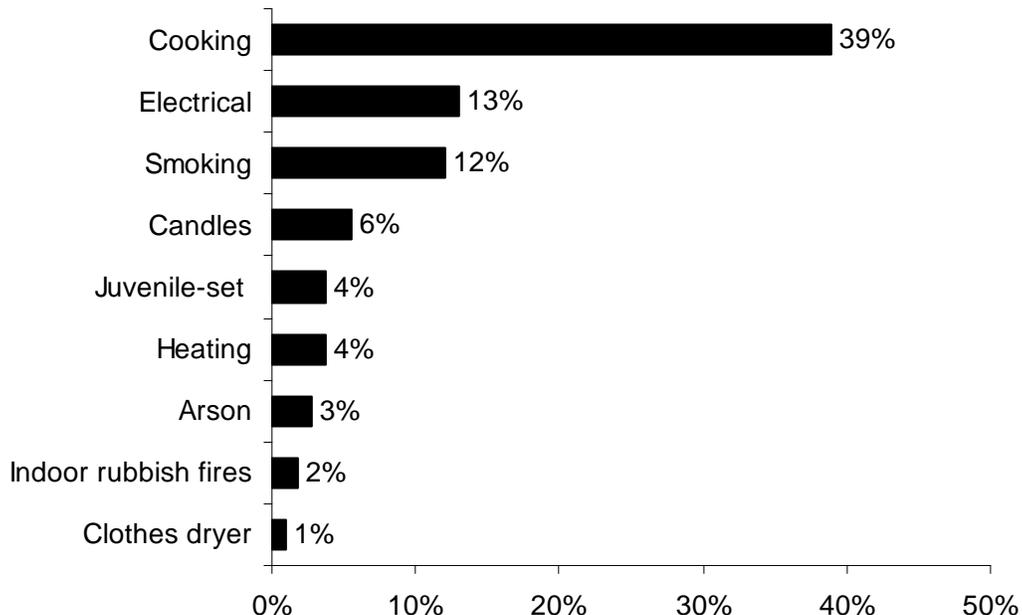

Apartments Accounted for Over 61% of Residential Building Fires

The peak fixed property uses for residential building fires were apartments, accounting for 61% of the residential building fires in Lawrence; 29% occurred in 1- or 2-family homes; 3% occurred in boarding houses; 1% occurred in residential board and care facilities; and 6% happened in unclassified residential properties.

Unattended Cooking Leading Cause of Residential Fires

The leading cause of residential building fires in Lawrence was unattended cooking and other unsafe cooking practices, accounting for 39% of these fires. Thirteen percent (13%) of these fires were caused by electrical problems. Smoking accounted for 12% of the fires in residential occupancies. Candles caused 6% of the residential fires. Juvenile-set fires

2008 Leading Causes of Fires in Lawrence Homes

and heating equipment each caused 4% of the residential fires in Lawrence in 2008. Arson caused 3% of the residential fires. Indoor rubbish fires accounted for 2% of these fires. Clothes dryers accounted for 1% of Lawrence's residential fires in 2008.

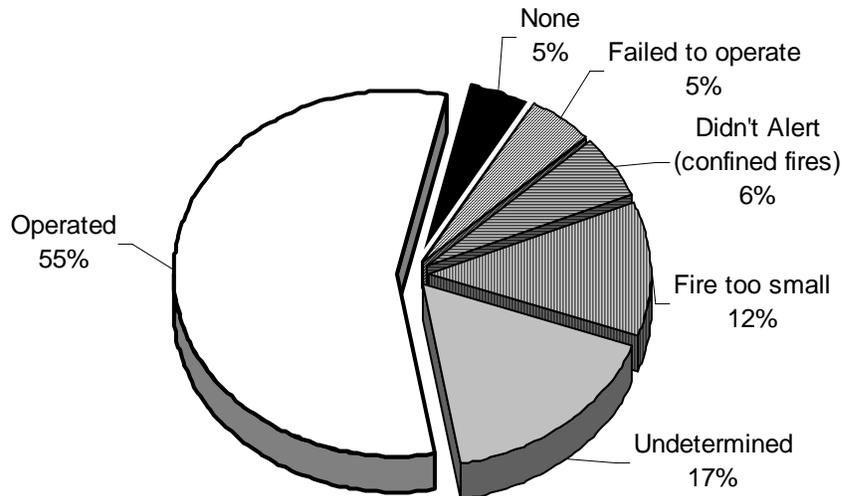

26% of Residential Building Fires Are Confined to Non-Combustible Containers¹

Twenty-eight (28), or 26% of all residential building fires were confined to non-combustible containers in 2008. Twenty (20), or 19% of all residential building fires reported in 2008, were cooking fires contained to a non-combustible container. Four (4), or 4%, of all residential building fires were fuel burner or boiler malfunctions. Another four, or 4%, of these fires were rubbish fires contained to a non-combustible container.

Detectors Alerted Occupants in Over 1/2 of Fires

Smoke or heat detectors operated and alerted the occupants in 61, or 55%, of the residential building fires. In 6% of these fires², the detectors did not alert the occupants. Detectors were present but did not operate in another 5% of these incidents. In 5% of these fires, no detectors were present at all. The fire was too small to trigger the detector in 12% of the residential fires. Smoke detector performance was undetermined in 18 incidents, or 17% of Lawrence's residential building fires.

Detector Status in Lawrence Residential Fires 2008

¹ In MFIRS v5 a fire in a building contained to a non-combustible container (Incident Type = 113-118) does not have to have a Fire Module completed. Therefore the following data fields do not need to be completed: Area of Origin, Detector Status, Item First Ignited, Heat Source, Factors Contributing to Ignition, Cause of Ignition, and Equipment Involved In Ignition. These incidents are not included in the analysis of these fields.

² These represent confined fires where it was reported that the detector did not alert the occupants.

Power Failure or Shut-offs Caused 40% of Failures

Of the five fires where smoke detectors were present but failed to operate, two, or 40%, failed because the power was shut off or failed. It was undetermined in the other three cases, or 60%, why the detectors failed to operate.

VACANT BUILDINGS**7% of Building Fires Occurred in Vacant Buildings**

Lawrence reported ten fires that occurred in buildings that were vacant, under construction or demolition³. This represented 7% of the total 135 building fires reported to MFIRS in 2008. Six (6) apartment buildings, one one- or two-family home, one house of worship, one bar or nightclub, and one unclassified non-adult school were reported as vacant building fire incidents.

JUVENILE-SET FIRES**6 Juvenile-set Fires**

There were six juvenile-set fires in Lawrence in 2008. The five structure fires and one brush fire caused an estimated \$416,050 in damages.

ARSONS**11 Total Arsons⁴ - 5 Structures, 5 Motor Vehicles & 1 Other**

Eleven (11), or 4%, of Lawrence's 260 fires were considered intentionally set, or, for purposes of this analysis, arson. The five structure arsons, five motor vehicle arsons and one outside and other arson caused an estimated dollar loss of \$476,500.

All Arson Is Down

The total number of arsons decreased by 32 from the 43 reported in 2007. Reported structure arsons decreased by seven from the 12 reported in 2007. Motor vehicle arsons decreased by four from 10 in 2007. Outside and other arsons decreased by 21 from the 22 reported last year.

³ In version 4 a vacant building was defined by having a Fixed Property Use code in the subsection of construction, unoccupied properties, between 910 & 919. However in version 5, the Property Use is separate from the Building Status. In v5 a building is considered vacant if the Building Status is coded: 1- Under Construction; 3-Idle, not routinely used; 4-Under major renovation; 5-Vacant, secured; 6-Vacant, unsecured; & 7-Being demolished. The building use is coded separately in the Property Use field.

⁴ In MFIRS v5 a fire is considered an arson if the Cause of Ignition = 1 (Intentional) and the Age of Person (Fire Module) is greater than 17 or if the field is blank; or if the Wildland Module is used, the Wildland Fire Cause = 7 (Incendiary) and the Age of the Person (Wildland Module) is greater than 17 or if the field is left blank.

ALL INCIDENTS

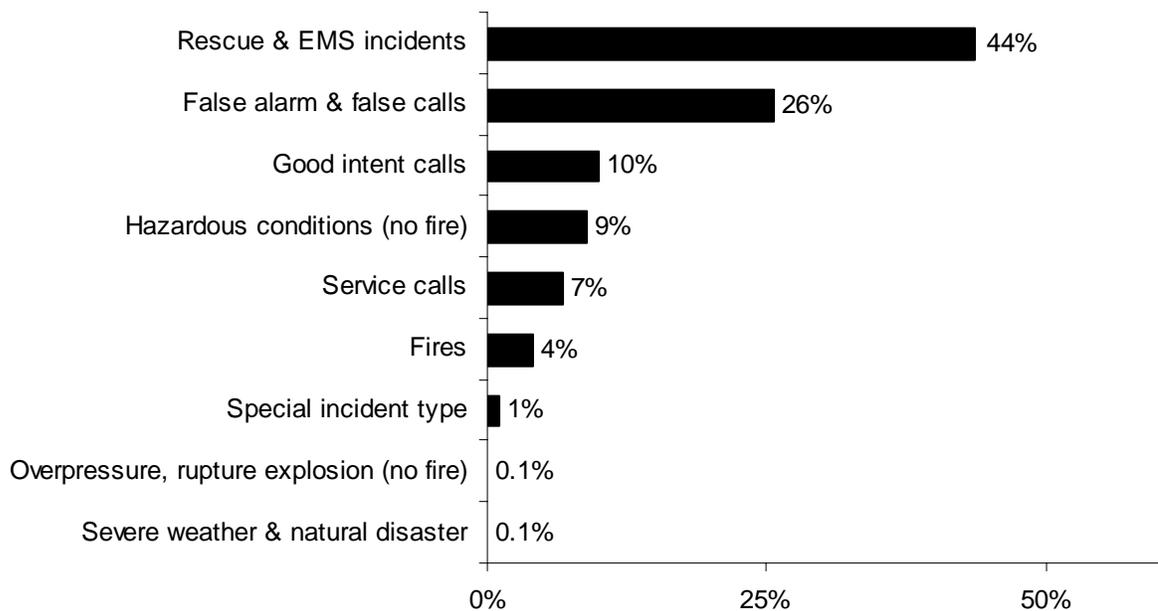

Rescue & EMS Calls Were 44% of All Reported Incidents

In 2008, Lawrence voluntarily reported 6,377 incidents to MFIRS. Of these 6,377 incidents, 6,117, or 96%, were non-fire incidents.

Of these 6,117 non-fire incidents 2,784, or 44% of all reported incidents in 2008, were reported rescue and emergency medical services (EMS) calls; 1,635, or 26%, were reported false alarm or false calls; 631, or 10%, were reported good intent calls; 566, or 9%, were reported hazardous condition calls with no fire; 428, or 4%, were reported service calls such as lock-outs, water or smoke problem, unauthorized burning or public service assistance; 64, or 1%, were special incident types; five, or 0.1%, were reported overpressure, rupture, explosion or overheat calls with no fire; and four, or 0.1% were severe weather calls;

In 2008, Lawrence reported 260 fires⁵, accounting for 4% of all reported incidents.

2008 Incidents by Incident Type

Lawrence Gave Mutual Aid in 6 Reported Incidents

In 2008, Lawrence reported coming to the aid of other fire departments six times. All six, or 100%, of these incidents were service calls such as station coverage.

⁵ This figure includes the mutual aid calls that Lawrence responded to outside of their jurisdiction.

Lawrence Received Aid in 12 Reported Incidents

In 2008, Lawrence reported receiving mutual aid at 12 incidents. All 12, or 100%, of these incidents were fires.

2008 Fires

Franklin County Fires in 2008

298 Total Fires — 154 Structures, 31 Motor Vehicles & 113 Outside or Other Fires

Franklin County ranked twelfth out of the fourteen Massachusetts counties in total fires. Franklin County fire departments reported 298 fires to the Massachusetts Fire Incident Reporting System (MFIRS) in 2008. The 154 structure fires, 31 motor vehicle fires, 47 brush, tree or lawn fires, 39 outside rubbish fires, seven special outside fires, one cultivated crop or vegetation fire and 19 unclassified fires caused two civilian injuries, three fire service injuries and an estimated dollar loss of \$1.8 million. There were no fatal fires in Franklin County in 2008. Franklin County's fires accounted for 1% of the 30,136 Massachusetts fires reported in 2008.

Twenty-seven (27) of the 29, or 93%, fire departments in Franklin County either reported incidents to the Massachusetts Fire Incident Reporting System (MFIRS) or certified that they had no reportable fires in 2008.

Structure Fires Up

The total number of reported fire incidents decreased by 31 from the 329 reported in 2007. Reported structure fires increased 27 from the 127 reported during the previous year. Motor vehicle fires decreased by five from 36 in 2007. Outside and other fires decreased 53 from the 166 reported the year before.

FRANKLIN COUNTY FIRES FROM 2004 TO 2008

Year	Total Fires	Structure Fires	Vehicle Fires	Other Fires	Total Arsons	Structure Arsons	Vehicle Arsons	Other Arsons
2004	363	176	39	148	12	6	1	5

Fire and Fire Death Rates

Franklin County had 4.2 fires per 1,000 population. That figure ranks Franklin County ninth in the state and below the state rate of 4.8 fires per 1,000 population. Franklin County also had 0 fire deaths per 10,000 population ranking it tied for twelfth among Massachusetts counties and below the state rate of 0.08 fire deaths per 10,000 population.

Greenfield Has Franklin County's Largest Loss Fire

- On May 11, 2008, at 9:43 p.m., the Greenfield Fire Department was called to a fire of undetermined cause at a strip mall at an antique shop. The fire began on the first floor. Two (2) firefighters were injured battling this blaze. It was undetermined if smoke detectors were present. The building was not sprinklered. Damages from this fire were estimated to be \$272,000.

STRUCTURE FIRES

Reported Structure Fires Up

The 154 structure fires caused one civilian injury, two fire service injuries and an estimated dollar loss of \$1.6 million. These incidents represented 52% of Franklin County's reported fires in 2008. The average estimated dollar loss per structure fire was \$10,329. The total number of reported structure fires increased by 27, or 21%, from the 127 reported in 2007.

Arson Caused of 1% of Structure Fires

The one structure arson caused an estimated dollar loss of \$100. Arson was indicated as the cause of 1% of the structure fires and less than 1% of Franklin County's structure fire dollar loss. The one structure arsons accounted for 7% of the Franklin County arson fires reported in 2008. The total number of reported structure arsons decreased by four, or 80%, from the three reported in 2007.

100% Structure Arsons Occurred in Residences

The one structure arson, or 100%, of Franklin County's structure arsons occurred in a 1-family home.

BUILDING FIRES

There were 151 building fires of different types in Franklin County in 2008. These 151 building fires accounted for 98.1% of all structure fires in Franklin County.

Over 3/4 of Franklin Building Fires Occurred in People's Homes

One hundred and twenty (120), or 79%, of Franklin County's 151 building fires occurred in residential occupancies. Seven (7) fires occurred in special properties. Manufacturing and processing facilities and mercantile or business properties each had six fires. Storage facilities had five fires. Three (3) fires happened at institutional facilities. Two (2) fires took place in public assembly properties, including restaurants and churches. One (1) fire occurred at an educational facility, and another in an industrial facility in Franklin County in 2008.

RESIDENTIAL FIRES

Residential Building Fires UP

There were 120 reported residential building fires in Franklin County in 2008. These 120 fires are an increase of 22, or 22%, from the 98 residential building fires reported in 2007.

1- & 2-Family Homes Accounted for Over 3/4 of Residential Building Fires

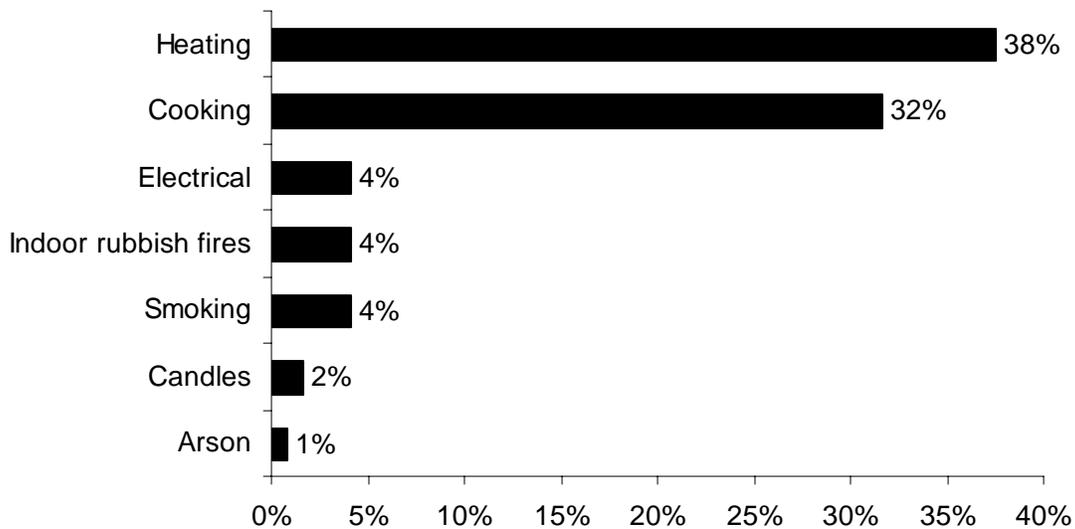

The peak fixed property uses for residential building fires were 1- & 2-family homes, accounting for 77% of the building fires in Franklin County; 18% occurred in apartments; 2% happened rooming houses; and 1% each occurred hotels and motels and

residential board and care facilities. Three (3), or 3% of the residential building fires in Franklin County occurred in unclassified residential buildings.

Heating Leading Cause of Residential Fires

Heating was the leading cause of residential fires in Franklin County in 2008. Thirty-eight percent (38%) of the residential fires were caused by heating. Eighty-nine percent (89%) of these heating fires involved solid fueled equipment such as wood or coal stoves. Franklin County and Hampshire County were the only counties where cooking was not the leading cause of residential fires in 2008. Unattended cooking and other unsafe cooking practices accounted for 32% of the fires in people's homes. Electrical problems, indoor rubbish fires and smoking each caused 4% of these fires. Candles accounted for 2% of the residential building fires. Arson caused 1% of the fires in people's homes in Franklin County in 2008.

2008 Leading Causes of Fires in Franklin County Homes

68% of Residential Building Fires Are Confined to Non-Combustible Containers¹

Eighty-two (82), or 68%, of these fires were confined to a non-combustible container. Thirty-seven (37), or 45% of all residential building fires reported in 2008, were fires confined to a chimney or flue. Another 37 of the reported fires were cooking fires contained to a non-combustible container accounting for 45% of residential building fires. Five (5), or 4%, of these fires were indoor rubbish fires contained to a non-

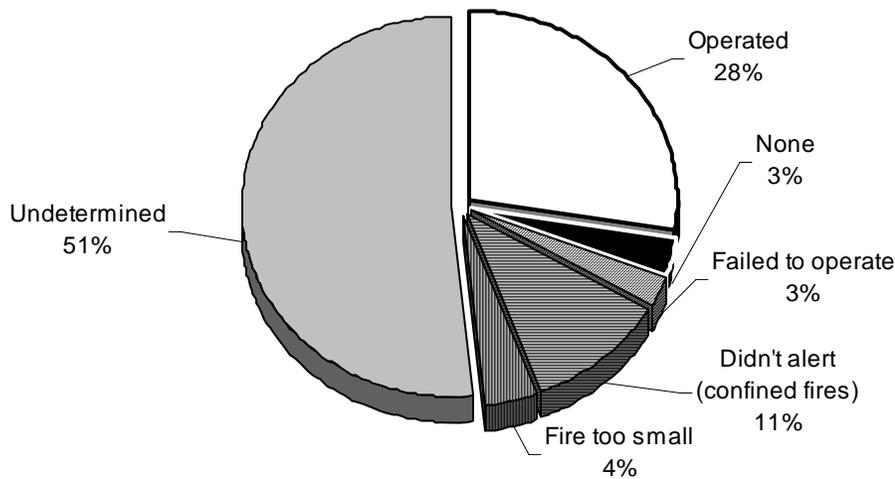

¹ In MFIRS v5 a fire in a building contained to a non-combustible container (Incident Type = 113-118) does not have to have a Fire Module completed. Therefore the following data fields do not need to be completed: Area of Origin, Detector Status, Item First Ignited, Heat Source, Factors Contributing to Ignition, Cause of Ignition, and Equipment Involved In Ignition. These incidents are not included in the analysis of these fields.

combustible container. Three (3), or 3%, were fires confined to a fuel burner or boiler malfunction in Franklin County in 2008.

Detectors Operation Undetermined in Over 1/2 of Fires

Smoke or heat detectors operated and alerted the occupants in 33, or 28%, of the residential building fires. In 11% of these fires², the detectors did not alert the occupants. Detectors were present but did not operate in 3% of these incidents. In 3% of these fires, no detectors were present at all. The fire was too small to trigger the detector in 4% of the residential fires. Smoke detector performance was undetermined in 62 incidents, or 51% of Franklin County's residential building fires.

Detector Status in Franklin County's Residential Structure Fires 2008

3 Detectors Failed

In the three fires where smoke detectors were present but failed to operate, one failed because it was defective; another failed because of a power shutoff; and it was unclassified why the third detector failed.

VACANT BUILDINGS

5% of Building Fires Occurred in Vacant Buildings

Franklin County reported 7 fires that occurred in buildings that were vacant, under construction or demolition³. This represented 5% of the total 151 building fires reported

² These represent confined fires where it was reported that the detector did not alert the occupants.

³ In version 4 a vacant building was defined by having a Fixed Property Use code in the subsection of construction, unoccupied properties, between 910 & 919. However in version 5, the Property Use is separate from the Building Status. In v5 a building is considered vacant if the Building Status is coded: 1- Under Construction; 3-Idle, not routinely used; 4-Under major renovation; 5-Vacant, secured; 6-Vacant, unsecured; & 7-Being demolished. The building use is coded separately in the Property Use field.

to MFIRS in 2008. Three (3) fires occurred in vacant residential properties; two occurred at storage facilities; and one vacant building fire occurred at a hospital, and the other in an antique shop in Franklin County in 2008.

None of the vacant building fires in Franklin County in 2008 were determined to be intentionally set.

JUVENILE-SET FIRES

No Reported Juvenile-set Fires

There were no reported juvenile-set fires in Franklin County in 2008.

ARSONS

14 Total Arsons — 1 Structure, 1 Motor Vehicle & 12 Other Arsons

Fourteen (14), or 5%, of Franklin County's 298 fires were intentionally set, or, for purposes of this analysis, arson⁴. The one structure arson, one motor vehicle arson and 12 outside and other arsons caused one fire service injury and an estimated dollar loss of \$2,700.

Structure Arson Down Slightly

The number of arsons decreased by four, or 22%, in 2008. Structure arsons decreased by four from the five reported in 2007. Motor vehicle arsons remained the same with one reported in both 2007 and 2008. Outside and other arsons also remained the same with 12 reported in both 2007 and 2008.

ALL INCIDENTS

Rescue & EMS Calls Are 39% of All Reported Responses

In 2008, Franklin County fire departments reported 4,506 responses⁵ to MFIRS. Of these 4,506 incidents, 4,506 non-fire calls were voluntarily reported.

Of these 4,506 non-fire calls 1,916, or 39% of all of the responses reported in 2008, were reported rescue and emergency medical services (EMS) calls; 747, or 15%, were reported service calls such as lock-outs, water or smoke problems, unauthorized burning or public service assistance; 716, or 14%, were reported false alarm or false calls; 550, or 11%, were reported good intent calls; 461 or 9%, were reported hazardous condition calls with no fire; 66, or 1%, were special incident type calls such as citizen complaints; 39, or 1%,

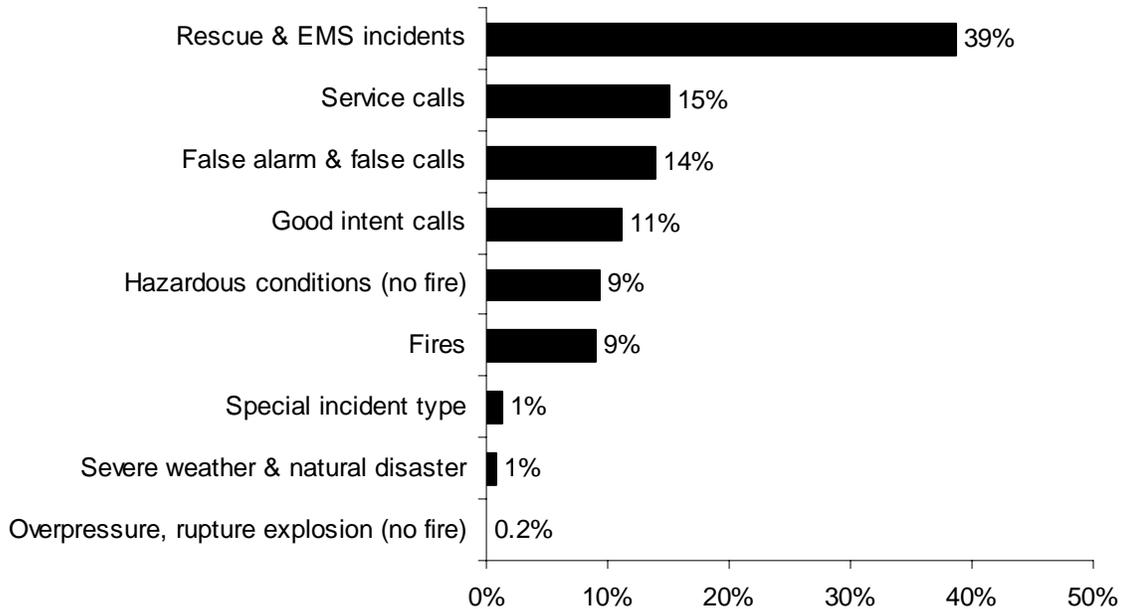

⁴ In MFIRS v5 a fire is considered an arson if the Cause of Ignition = 1 (Intentional) and the Age of Person (Fire Module) is greater than 17 or if the field is blank; or if the Wildland Module is used, the Wildland Fire Cause = 7 (Incendiary) and the Age of the Person (Wildland Module) is greater than 17 or if the field is left blank.

⁵ These figures include responses in which Franklin County fire departments gave mutual aid to other fire departments.

were severe weather responses; and 11, or 0.2%, were reported overpressure, rupture, explosion or overheat calls with no fire.

Four hundred and forty-six (446), or 9%, of the total incidents submitted by Franklin County fire departments were fires.

2008 Responses by Incident Type

Franklin County Fire Departments Gave Mutual Aid 256 Times

In 2008, Franklin County fire departments reported coming to the aid of other fire departments 256 times. Of these 256 responses, 143, or 56%, were for fires; 54, or 21%, were for service calls such as cover assignments; 38, or 15%, were for rescue or EMS calls; 11, or 4%, were for good intent calls; six, or 2%, were for hazardous conditions calls with no fire; three, or 1%, were for false alarms or false calls; and one, or 0.4% was for an overpressure, rupture explosion with no fire.

Franklin County is the only county where giving mutual aid for fires is the leading type of mutual aid given calls in that county.

Franklin County Received Mutual Aid in 139 Incidents

In 2008, Franklin County fire departments reported receiving aid from surrounding departments in 139 incidents. Of these 139 incidents, 68, or 49%, were rescue and emergency medical services calls; 41, or 29%, were for fires; 10, or 7%, were service calls; six, or 4%, were hazardous conditions calls with no fire; another six, or 4%, was a false alarm or false call; three, or 2%, were good intent calls; one, 1% was severe weather call; and another one, or 1% was a special incident type call.

2008 Fires

Hampden County Fires in 2008

2,485 Total Fires — 1,395 Structures, 271 Vehicles & 819 Other Fires

Hampden County ranked sixth out of the fourteen Massachusetts counties in total reported fires. Hampden County Fire Departments reported 2,485 fires to the Massachusetts Fire Incident Reporting System (MFIRS) in 2008. The 1,395 structure fires, 271 motor vehicle fires, 356 brush, tree or lawn fires, 326 outside rubbish fires, 63 special outside fires, two cultivated vegetation or crop fires, and 72 other fires caused six civilian fire deaths, 48 civilian injuries, 73 fire service injuries and an estimated dollar loss of \$20.4 million. Hampden County's 2,485 fires accounted for 8% of the 30,136 fire incidents reported to MFIRS in 2008.

Twenty-four (24), or 96%, of the 25 fire departments in Hampden County either reported incidents to the Massachusetts Fire Incident Reporting System (MFIRS) or certified that they had no reportable fires in 2008.

All Fires Down

The total number of reported fire incidents decreased by 290 from the 2,775 reported in 2007. Reported structure fires decreased by 41 from the 1,436 reported during the previous year. Motor vehicle fires also decreased by 41 from the 312 reported during 2007. Outside and other fires decreased by 208 from the 1,027 reported the year before.

HAMPDEN COUNTY FIRES FROM 2004 TO 2008

Year	Total Fires	Structure Fires	Vehicle Fires	Other Fires	Total Arsons	Structure Arsons	Vehicle Arsons	Other Arsons

2007	2,775	1,436	312	1,027	83	22	13	48
2008	2,485	1,395	271	819	93	30	14	49

Fire and Fire Death Rates

Hampden County had 5.4 fires per 1,000 population. That figure ranks Hampden County third in the state and above the state rate of 4.8 fires per 1,000 population. Hampden County also had 0.13 fire deaths per 10,000 population ranking it tied for second among Massachusetts counties and above the state rate of 0.08 fire deaths per 10,000 population.

6 Residents Died in 5 Hampden County Fires

- On March 28, 2008 at 9:37 a.m., the Chicopee Fire Department was called to a fatal gasoline tanker fire on Interstate 91 North. The tanker had been cut off and the driver swerved to avoid the other vehicle. The truck rolled off the highway onto several other vehicles below. Other motorists pulled the driver out of his burning cab. The 43-year old driver was transported to a local hospital. He was then transferred to a

Boston hospital where he later succumbed to his injuries. One firefighter was injured in this fire, and damages were estimated at \$60,000.

- On April 10, 2008, at 12:48 a.m., the West Springfield Fire Department was called to a fatal smoking fire in a 60-unit apartment building. The fire was started in a first floor bedroom by a cigarette. The victim, a 58-year old man was using home oxygen. He was discovered by firefighters and taken out of the building and died from burns and smoke inhalation. No other injuries were associated with this fire. Smoke detectors were present but it was undetermined if they operated. There were no sprinklers. Damages from the fire were estimated to be \$10,000.
- On April 10, 2008, at 7:25 p.m., the Holyoke Fire Department was called to a fatal juvenile-set fire in a single-family home. The victims, a 1-year old girl and her 4-year old brother, were both in the room where their older brother was playing with a cigarette lighter. He accidentally lit something on fire. A 20-year old man was burned when he went into the burning home and brought all three of the children out. They were all transported to a local hospital where the two victims later succumbed to their injuries. Detectors were present but it was undetermined if they operated. There were no smoke detectors. No estimation of the damages was made for this fire.
- On May 13, 2008, at 8:05 p.m., the Palmer Fire Department was called to a fatal electrical fire in a four-unit apartment building. The fire was caused by a pinched electrical cord in the living room. The victim, a 79-year old man, was overcome by the heat and smoke. There were no other injuries at this fire. Smoke detectors were present but it was undetermined if they operated. The building was not sprinklered, and damages were estimated to be \$75,000.
- On November 13, 2008 at 1:16 a.m., the Palmer Fire Department was called to a heating fire in a four-unit apartment building. The fire was started when the victim's blanket came into contact with the electric baseboard heater. The victim, a 44-year old, man was overcome by the heat and smoke. There was one other civilian injury associated with this fire. It was undetermined if detectors were present, but sprinklers were not. Damages were estimated to be \$195,900.

Springfield & West Springfield Each Had Largest Loss Fire in Hampden County

- On March 27, 2008, at 3:30 p.m., the West Springfield Fire Department responded to a fire at a motor vehicle repair shop. Some of the employees had removed a gas tank from a vehicle and were moving it to another location. Another employee was using a cutting torch and that ignited the gas fumes coming from the tank. Both of the men carrying the gas tank were severely injured when their clothes ignited. It was undetermined if detectors were present and the building was not sprinklered. Damages were estimated to be \$2 million.
- On November 5, 2008, at 3:11 a.m., the Springfield Fire Department responded to an intentionally set fire at a church under construction that was 90% complete at the time of the fire. The church had a predominantly black congregation. Started just hours

after the presidential election, the fire is believed to have been set in reaction to the election of President Obama, the first black U.S. President. Five (5) firefighters were injured battling this fire. Detectors were not present and the building was not sprinklered. Damages were estimated to be \$2 million.

STRUCTURE FIRES

Reported Structure Fires Down

The 1,395 structure fires caused five civilian deaths, 40 civilian injuries, 67 fire service injuries and an estimated dollar loss of \$18.5 million. These incidents represented 56% of Hampden County's reported fires in 2008. The average estimated dollar loss per structure fire was \$13,248. The total number of reported structure fires decreased by 41, or 3%, from the 1,436 reported in 2007.

Arson Caused 2% of Structure Fires

The 30 structure arsons caused one civilian injury, nine fire service injuries and an estimated dollar loss of \$2,321,841. Arson was indicated as the cause of 2% of the structure fires and 13%, of Hampden County's structure fire dollar loss. The 30 structure arsons accounted for 32% of the Hampden County arson fires reported in 2008. The total number of reported structure arsons increased by eight, or 36%, from 22 in 2007.

62% of Structure Arsons Occurred in Residences

Sixty-two percent (62%) of Hampden County's 29 structure arsons occurred in residential occupancies; 14% happened in special properties; and 7% each occurred in public assembly properties, educational properties, storage facilities, and mercantile or business properties.

BUILDING FIRES

There were 1,383 building fires of different types in Hampden County in 2008. These 1,383 building fires accounted for 99.1% of all structure fires in Hampden County.

83% of Hampden Building Fires Occurred in People's Homes

One thousand one hundred and fifty-one (1,151), or 83%, of Hampden County's 1,383 building fires occurred in residential occupancies. Mercantile and business properties experienced 46 fires. Hospitals, prisons, and other institutional buildings experienced 42 fires. Special properties had 40 fires. Thirty-four (34) fires took place in public assembly properties, including restaurants and churches. Thirty-one (31) building fires took place on educational properties. Twenty-five (25) fires took place in storage properties. Eight (8) fires took place in manufacturing and processing facilities. Five (5) fires occurred in industrial, utility, defense, agricultural or mining facilities in Hampden County in 2008.

RESIDENTIAL FIRES

Residential Building Fires Down Slightly

There were 1,151 reported residential building fires in Hampden County in 2008. These 1,151 fires are a decrease of nine, or 1%, from the 1,160 residential building fires reported in 2007.

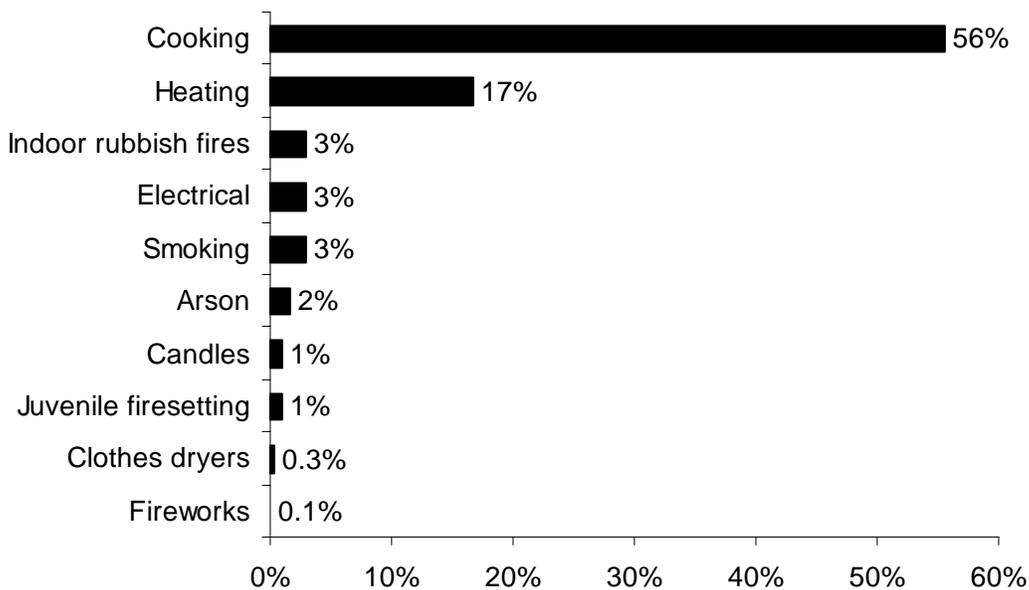

1- & 2-Family Homes Accounted for Almost 1/2 of Residential Building Fires

The peak fixed property uses for residential building fires were 1- & 2-family homes, accounting for almost half, or 49%, of the building fires in Hampden County; 45% occurred in apartments; 2% happened in residential board and care facilities; 1% happened in rooming houses; another 1% happened in hotels or motels; 1% occurred in dormitories. Eight (8), or 1% of the residential building fires in Hampden County occurred in unclassified residential buildings.

Unattended Cooking Causes Over 1/2 of Residential Fires

The leading cause of residential building fires in Hampden County was unattended cooking and other unsafe cooking practices, accounting for 56% of these fires. Heating was the second leading cause of fires in people’s homes, accounting for 17% of these fires. Indoor rubbish fires, smoking and electrical problems each caused 3% of these fires. Arsons caused 2% of these fires. Candles and juvenile-set fires each caused 1% of the fires in Hampden County in 2008. Less than 1% of residential fires in Hampden County were caused by clothes dryers and fireworks.

2008 Leading Causes of Fires in Hampden County Homes

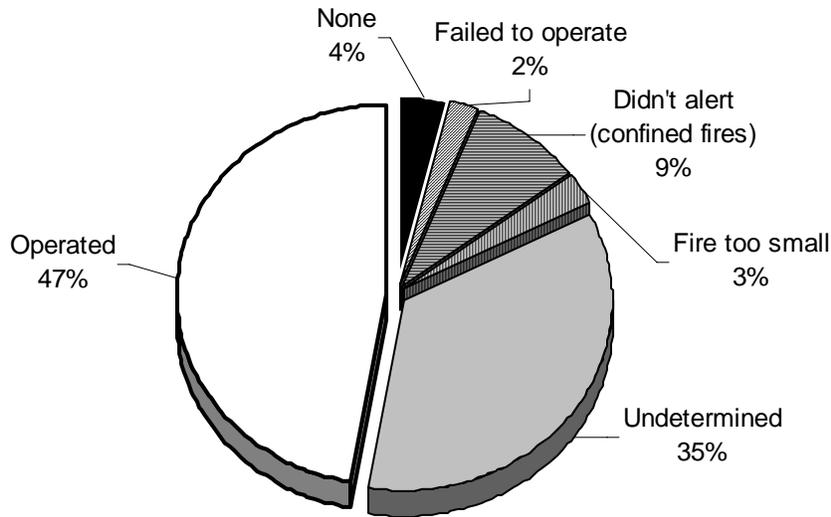

73% of Residential Building Fires Are Confined to Non-Combustible Containers¹

Eight hundred and forty (840), or 73% of all residential building fires, were reported as confined to non-combustible containers in 2008. Six hundred and six (606) of the reported fires were cooking fires contained to a non-combustible container accounting for 53% of residential building fires. One hundred and twenty-seven (127), or 11%, were fires confined to a fuel burner or boiler malfunction. Fifty-seven (57), or 5%, of all residential building fires reported in 2008 were fires confined to a chimney. Forty-five (45), or 4%, of these fires were contained rubbish fires. Five (5), or 1%, of confined fires occurred in incinerators.

Detectors Alerted Occupants in Almost 1/2 of Fires

Smoke or heat detectors operated and alerted the occupants in 545, or 47%, of the residential building fires. In 9% of these fires², the detectors did not alert the occupants. Detectors were present but did not operate in 2% of these incidents. In 4% of these fires, no detectors were present at all. The fire was too small to trigger the detector in 3% of the residential fires. Smoke detector performance was undetermined in 407 incidents, or 35% of Hampden County’s residential building fires.

Detector Status in Hampden County's Residential Structure Fires 2008

¹ In MFIRS v5 a fire in a building contained to a non-combustible container (Incident Type = 113-118) does not have to have a Fire Module completed. Therefore the following data fields do not need to be completed: Area of Origin, Detector Status, Item First Ignited, Heat Source, Factors Contributing to Ignition, Cause of Ignition, and Equipment Involved In Ignition. These incidents are not included in the analysis of these fields.

² These represent confined fires where it was reported that the detector did not alert the occupants.

Almost 1/2 of Failed Detectors Had Missing or Disconnected Batteries

Of the 28 fires where smoke detectors were present but failed to operate, 13, or 46%, failed because the batteries were either missing or disconnected. In three incidents, or 11%, the detectors failed because the batteries were dead. In one fire, or 4%, the detector failed because of a lack of maintenance. Eleven (11), or 39% of the detectors failed for unclassified or undetermined reasons.

VACANT BUILDINGS**4% of Building Fires Occurred in Vacant Buildings**

Hampden County reported 52 fires that occurred in buildings that were vacant, under construction or demolition³. This represented 4% of the total 1,383 building fires reported to MFIRS in 2008. Thirty-nine (39) fires occurred in vacant residential properties. Four (4) fires in storage facilities were reported as vacant building fires. Mercantile and business properties reported three vacant building fire incidents. Another three of these fires occurred at manufacturing and processing facilities. Public assembly properties also accounted for three vacant building fires in Hampden County in 2008.

Six (6), or 12%, of the vacant building fires in Hampden County in 2008 were determined to be intentionally set. Three of these fires occurred in single-family homes and the other three happened in apartment buildings.

JUVENILE-SET FIRES**21 Juvenile-set Fires Caused 2 Civilian Deaths**

There were 21 reported juvenile-set fires in Hampden County in 2008. The nine structure fires, one motor vehicle fire, eight brush fires and two special outside fires, and one unclassified fire caused two civilian deaths, one civilian injury, one fire service injury and \$354,240 in estimated damages.

ARSONS**92 Total Arsons — 29 Structures, 14 Vehicles & 49 Other Arsons**

Ninety-two (92), or 4%, of Hampden County's 2,485 fires were considered intentionally set, or, for purposes of this analysis, arson⁴. The 29 structure arsons, 14 motor vehicle arsons and 49 outside and other arsons caused one civilian injury, four fire service injuries and an estimated dollar loss of \$383,391.

³ In version 4 a vacant building was defined by having a Fixed Property Use code in the subsection of construction, unoccupied properties, between 910 & 919. However in version 5, the Property Use is separate from the Building Status. In v5 a building is considered vacant if the Building Status is coded: 1- Under Construction; 3-Idle, not routinely used; 4-Under major renovation; 5-Vacant, secured; 6-Vacant, unsecured; & 7-Being demolished. The building use is coded separately in the Property Use field.

⁴ In MFIRS v5 a fire is considered an arson if the Cause of Ignition = 1 (Intentional) and the Age of Person (Fire Module) is greater than 17 or if the field is blank; or if the Wildland Module is used, the Wildland Fire Cause = 7 (Incendiary) and the Age of the Person (Wildland Module) is greater than 17 or if the field is left blank.

All Arson Up

The total number of reported arson fires increased by nine from the 83 reported in 2007. Structure arsons increased by seven from the 22 reported in 2007. Motor vehicle arsons increased by one from the 13 reported the year before. Outside and other fires increased by one from the 48 reported the year before.

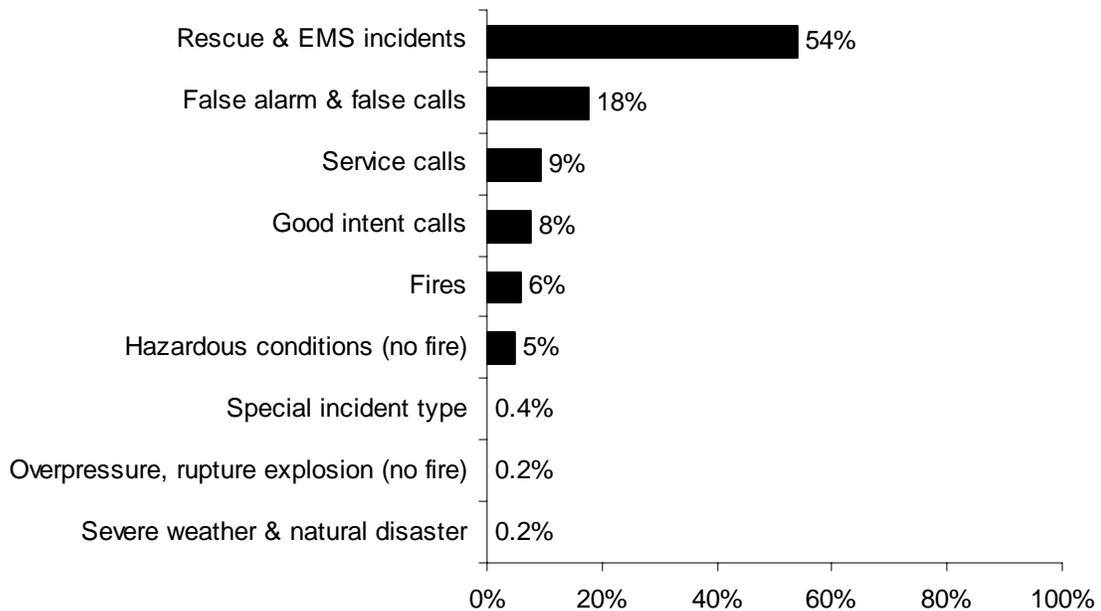

ALL INCIDENTS

Rescue & EMS Calls Are Over 1/2 of All Reported Responses

In 2008, fire departments in Hampden County reported 42,921 responses⁵ to MFIRS. Of these 42,921 incidents, 40,334 non-fire calls were voluntarily reported.

Of these 40,334 non-fire calls 23,099, or 54% of all reported responses in 2008, were reported rescue and emergency medical services (EMS) calls; 7,547, or 18%, were reported false alarm or false calls; 3,977, or 9%, were reported service calls such as lock-outs, water or smoke problems, unauthorized burning or public service assistance; 3,277, or 8%, were reported good intent calls; 2,090, or 5%, were reported hazardous condition calls with no fire; 183, or 0.4%, were special incident type calls such as citizen

2008 Responses by Incident Type

complaints; 91, or 0.2%, were reported overpressure, rupture, explosion or overheat calls with no fire; and 70, or 0.2%, were severe weather responses.

⁵ These figures include responses in which Hampden County fire departments gave mutual aid to other fire departments.

Two thousand five hundred and eighty-seven (2,587), or 6%, of the total responses submitted by Hampden County fire departments were fires.

Hampden County Fire Departments Gave Mutual Aid 654 Times

In 2008, Hampden County fire departments reported coming to the aid of other fire departments 654 times. Of these 654 responses, 394, or 60%, were for rescue or EMS calls; 102, or 16%, were for fires; 94, or 14%, were for service calls such as cover assignments; 35, or 5%, were for good intent calls; 19, or 3%, were for hazardous conditions calls with no fire; eight, or 1%, were for false alarms or false calls; and two, or less than 1%, were special incident types.

Hampden County Received Mutual Aid in 817 Incidents

In 2008, Hampden County fire departments reported receiving aid from surrounding departments in 817 incidents. Of these 817 incidents, 711, or 87%, were rescue and emergency medical services calls; 68, or 8%, were for fires; 14, or 2%, were service calls; nine, or 1%, were false alarms or false calls; eight, or 1%, were good intent calls; and seven, or 1%, were hazardous conditions calls with no fire.

⁶ This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

⁷ These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Heat Source from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires, but is sometimes voluntarily reported.

Didn't alert occupants	11%
Undetermined	39%

⁸ This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

⁹ Some fields in version 5 allow for multiple entries. Therefore the number of entries may be greater than the actual number of incidents being analyzed. These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Factors Contributing to Ignition from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires.

¹⁰ This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

¹¹ These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Cause of Ignition from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires.

Springfield Fires in 2008

1,138 Total Fires — 687 Structures, 104 Vehicles & 347 Other Fires

The Springfield Fire Department reported 1,138 fires to the Massachusetts Fire Incident Reporting System (MFIRS) in 2008. The 687 structure fires, 104 motor vehicle fires, 196 outside trash fires, 108 brush fires, 24 special outside fires, and 19 unclassified fires caused 21 civilian injuries, 61 fire service injuries and an estimated dollar loss of \$9 million.

No Fire Deaths in Springfield in 2008

There were no reported fire deaths in Springfield in 2008. This is a dramatic turn around from the previous year when seven Springfield residents were killed in two fatal fires and two fatal domestic arsons.

All Fires Down in 2008

Total fires decreased by 173 from 1,311 incidents in 2007. Reported structure fires were down 54 from the 741 reported during the previous year. Motor vehicle fires decreased by 25 from 129 the year before. Outside and other fires decreased by 94 from the 441 reported in 2007.

SPRINGFIELD FIRES FROM 2004 TO 2008

	Total Fires	Structure Fires	Vehicle Fires	Other Fires	Total Arsons	Structure Arsons	Vehicle Arsons	Other Arsons

2007	1,311	741	129	441	15	3	10	2
2008	1,138	687	104	347	22	12	6	4

BUILDING FIRES

There were 684 building fires of different types in Springfield in 2008. These 684 building fires accounted for 99.4% of all structure fires in Springfield.

87% of Building Fires in Homes

The 684 building fires that occurred in Springfield in 2008 can be broken down by fixed property use as follows: 592, or 87% of all building fires, were in residential properties; 24 fires occurred in institutional properties; 21 fires occurred in educational properties; 16 fires happened in mercantile or business properties; 14 fires took place in public assembly properties; nine fires occurred in storage properties; four fires occurred at industrial facilities; two fires occurred in special properties; one fire happened in a manufacturing or processing facility; and one fire occurred in an unclassified building.

RESIDENTIAL FIRES

Residential Building Fires Down Slightly

There were 592 reported residential building fires in Springfield in 2008. These 592 fires are a decrease of 49, or 8%, over the 641 residential building fires reported in 2007.

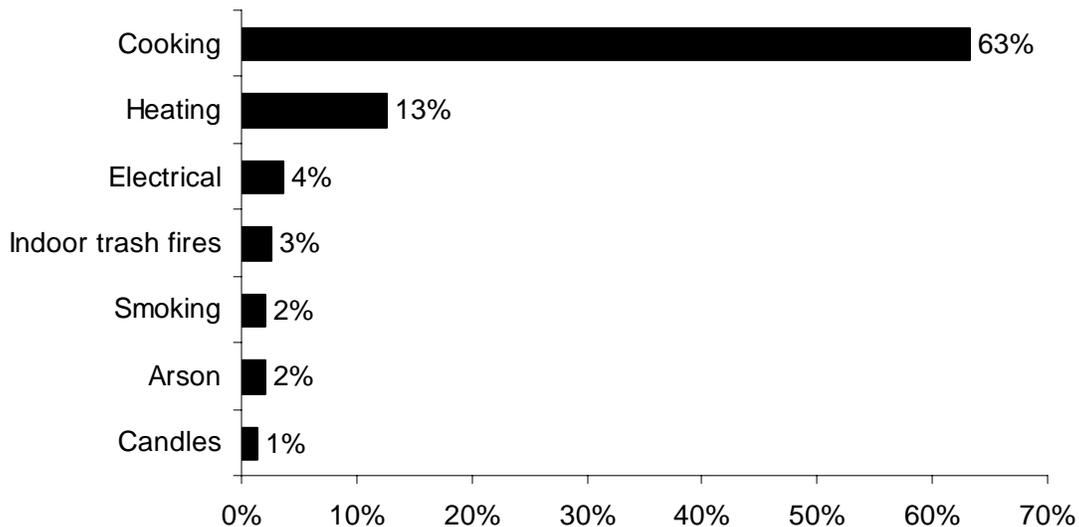

Apartments Accounted for 55% of Residential Building Fires

The peak fixed property uses for residential building fires were apartments, accounting for 55% of these building fires in Springfield; 39% occurred in 1- or 2-family homes; 3% occurred in residential board and care facilities; 1% occurred in dormitories, 1% occurred in hotels or motels; and another 1% occurred in rooming houses. One percent (1%) also occurred in unclassified residential buildings.

Unattended Cooking Leading Cause of Residential Fires

The leading cause of residential building fires in Springfield was unattended cooking and other unsafe cooking practices, accounting for 63% of these fires. Heating equipment accounted for 13% of the residential building fires in 2008. Electrical problems were responsible for 4% of these fires. Indoor rubbish fires were responsible for 3%. Smoking and arson each caused 2% of these fires. Candles caused 1% of the fires in people's homes in Springfield in 2008.

2008 Leading Causes of Fires in Springfield Homes

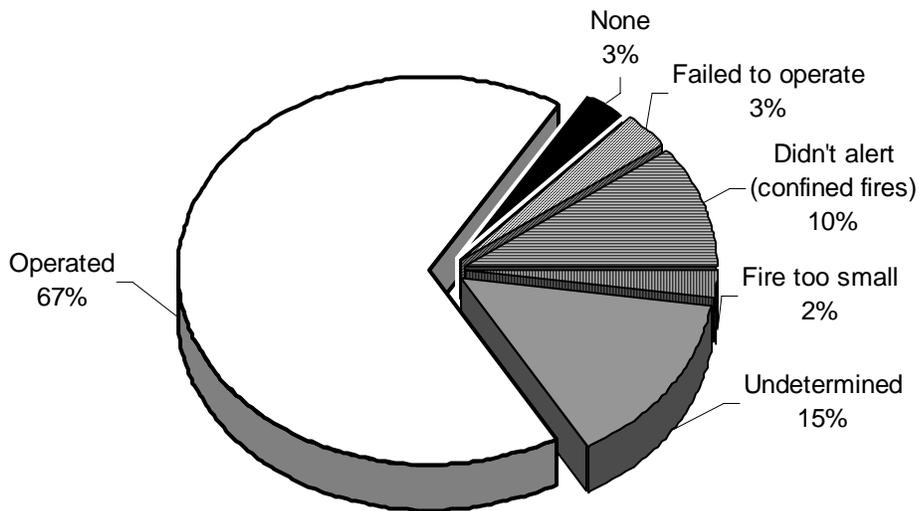

76% of Residential Building Fires Are Confined to Non-Combustible Containers¹

Four hundred and forty-eight (448), or 76% of all residential building fires were confined to non-combustible containers in 2008. Three hundred and fifty-seven (357), or 60% of all residential building fires reported in 2008 were cooking fires contained to a non-combustible container. Seventy (70), or 12% of all residential fires were fuel burner or boiler malfunctions. Thirteen (13), or 2% of residential fires were rubbish fires contained to a non-combustible container. Four (4) fires were confined to chimneys, which accounted for 1% of residential building fires. Four (4) incinerator overloads or malfunctions, accounted for 1% of residential building fires in 2008.

Detectors Alerted Occupants in 2/3 of Fires

Smoke or heat detectors operated and alerted the occupants in 396, or 67%, of the residential building fires. In 10% of these fires², the detectors did not alert the occupants. Detectors were present but did not operate in 3% of these incidents. In 3% of these fires, no detectors were present at all. The fire was too small to trigger the detector in 2% of the residential fires. Smoke detector performance was undetermined in 86 incidents, or 15% of Springfield's residential building fires.

Detector Status in Springfield Residential Fires 2008

¹ In MFIRS v5 a fire in a building contained to a non-combustible container (Incident Type = 113-118) does not have to have a Fire Module completed. Therefore the following data fields do not need to be completed: Area of Origin, Detector Status, Item First Ignited, Heat Source, Factors Contributing to Ignition, Cause of Ignition, and Equipment Involved In Ignition. These incidents are not included in the analysis of these fields.

² These represent confined fires where it was reported that the detector did not alert the occupants.

Almost 1/2 of Failed Detectors Had Missing or Disconnected Batteries

Of the 17 fires where smoke detectors were present but failed to operate, eight, or 47%, failed because the batteries were either missing or disconnected. A lack of maintenance caused one, or 6%, of the detectors to fail. A dead battery was also responsible for one, or 6%, of the smoke detectors that failed to operate. It was undetermined in the other seven, or 41%, cases why the detectors failed to operate.

VACANT BUILDINGS**23 Building Fires in Vacant Buildings**

Springfield reported 23 fires that occurred in buildings that were vacant, under construction or demolition³. This represented 3% of the total 684 building fires reported to MFIRS in 2008. Fourteen (14) one- or two-family homes, five apartment buildings, one detached residential garage, one unclassified business; one church; and an unclassified variable use amusement or recreation facility were reported as vacant building fire incidents.

JUVENILE-SET FIRES**2 Juvenile-set Fires**

There were two juvenile-set fires in Springfield in 2008. The one unclassified motor vehicle fire and one unclassified fire caused \$1,300 in estimated damages.

ARSONS**22 Total Arsons⁴ — 12 Structures, 6 Motor Vehicles, & 4 Other**

Twenty-two (22), or 2%, of Springfield's 1,138 fires were intentionally set, or, for purposes of this analysis, arson. The 12 structure arsons, six motor vehicle arsons and four outside and other arsons caused three fire service injuries and an estimated dollar loss of \$284,055.

0 Civilian Deaths or Injuries in 2008 Arsons

In 2007, the City of Springfield had two fatal fires and four resulting deaths that were the result of domestic violence arsons. In 2008 Springfield didn't report any civilian deaths or civilian injuries from arson.

³ In version 4 a vacant building was defined by having a Fixed Property Use code in the subsection of construction, unoccupied properties, between 910 & 919. However in version 5, the Property Use is separate from the Building Status. In v5 a building is considered vacant if the Building Status is coded: 1- Under Construction; 3-Idle, not routinely used; 4-Under major renovation; 5-Vacant, secured; 6-Vacant, unsecured; & 7-Being demolished. The building use is coded separately in the Property Use field.

⁴ In MFIRS v5 a fire is considered an arson if the Cause of Ignition = 1 (Intentional) and the Age of Person (Fire Module) is greater than 17 or if the field is blank; or if the Wildland Module is used, the Wildland Fire Cause = 7 (Incendiary) and the Age of the Person (Wildland Module) is greater than 17 or if the field is left blank.

Structure Arsons Up

The total number of arsons reported, 22, increased by seven from the 15 reported in 2007. Reported structure arsons increased nine from three the year before. Motor vehicle arsons decreased four from the 10 reported in 2007. Outside and other arsons increased two from the two reported last year.

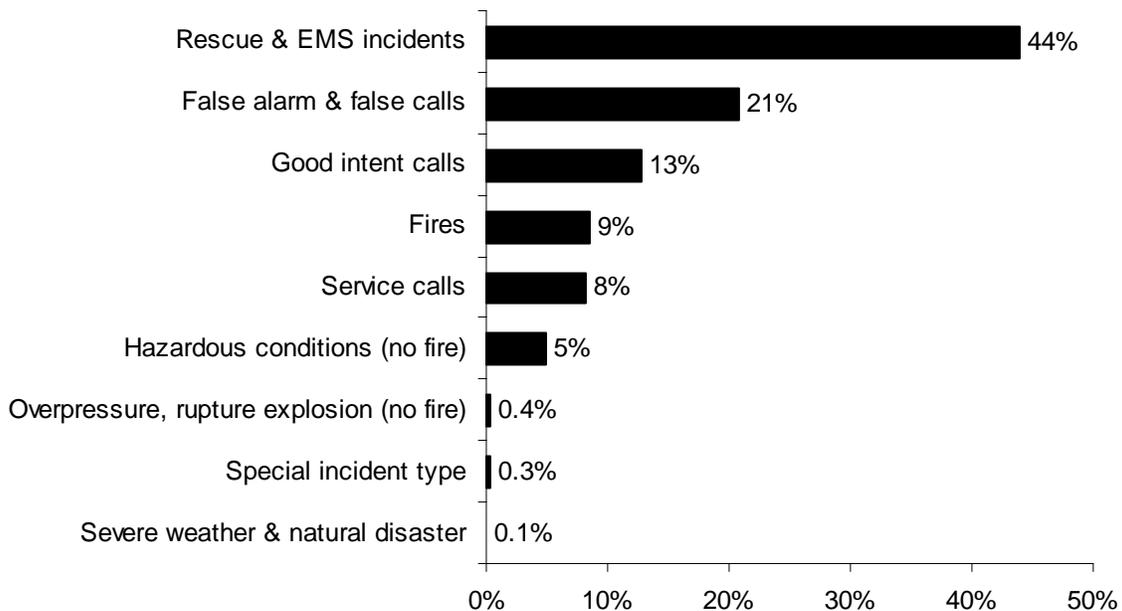

Springfield reported 129 fires that are still under investigation or undetermined after investigation. This high number of fires with these classifications is one possible reason for the unusually low number of reported arsons in Springfield in 2008.

Rescue & EMS Calls Are 44% of All Reported Incidents

In 2008, Springfield voluntarily reported 13,590 incidents to MFIRS. Of these 13,590 incidents, 12,429, or 91% were non-fire incidents.

Of these 12,429 non-fire incidents 5,977, or 44%, were reported rescue and emergency medical services (EMS) calls; 2,835, or 21%, were reported false alarm or false calls; 1,731, or 13%, were reported good intent calls; 1,117, or 8%, were reported service calls such as lock-outs, water or smoke problem, unauthorized burning or public service assistance; 659, or 5%, were reported hazardous condition calls with no fire; 54, or 0.4%, were reported overpressure, rupture, explosion or overheat calls with no fire; 42, or 0.3%, were special incident type calls, such as citizen complaints; and 14, or 0.1%, were responses caused by severe weather.

2008 Incidents by Incident Type

In 2008, Springfield reported 1,161 fires⁵ to MFIRS, accounting for 9% of all reported incidents.

Springfield Gave Mutual Aid in 83 Reported Incidents

In 2008, Springfield reported giving mutual aid 83 times. Of these 83 incidents, 26, or 31%, were rescue or EMS incidents; 23, or 28%, were for fires; 15, or 18%, were for cover assignments (service calls); 12, or 14% were good intent calls; five, or 6% were false alarms; one, or 1%, was a hazardous condition call without fire; and another mutual aid given call, or 1%, was for a special incident type.

Springfield Received Mutual Aid in 23 Incidents

In 2008, Springfield reported receiving mutual aid from surrounding fire departments in 23 incidents. Of these 23 incidents, 12, or 52%, were for rescue or EMS incidents; three, or 13%, were service calls; another three, or 13%, were for false alarms; three, or 13%, were for good intent calls; and two, or 9%, were for fires.

⁵ This figure includes fires that Springfield responded to calls of mutual aid outside of their jurisdiction.

Item First Ignited⁸	%	Factor Contrib. to Ignition	%	%Unconfined⁹

Severe weather & natural disaster	14	0.1%

⁸ This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

⁹ Some fields in version 5 allow for multiple entries. Therefore the number of entries may be greater than the actual number of incidents being analyzed. These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Factors Contributing to Ignition from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires.

¹⁰ This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

¹¹ These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Cause of Ignition from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires.

¹² This figure contains calls for mutual aid assistance.

Hampshire County Fires 2008

2008 Fires

Hampshire County Fires in 2008

518 Total Fires — 223 Structures, 42 Vehicles & 253 Other Fires

Hampshire County ranked eleventh out of the fourteen Massachusetts counties in total reported fires. Hampshire County Fire Departments reported 518 fires to the Massachusetts Fire Incident Reporting System (MFIRS) in 2008. The 223 structure fires, 42 motor vehicle fires, 106 brush, tree or lawn fires, 65 outside rubbish fires, 22 special outside fires, one cultivated vegetation or crop fire and 59 other fires caused two civilian deaths, 13 civilian injuries, six fire service injuries and an estimated dollar loss of \$6 million. Hampshire County's 518 total reported fires accounted for 2% of the 30,136 fires reported to MFIRS in 2008.

All 21 fire departments in Hampshire County either reported incidents to the Massachusetts Fire Incident Reporting System (MFIRS) or certified that they had no reportable fires in 2008.

All Fires Down

The total number of reported fire incidents decreased by 117 from the 635 reported in 2007. Reported structure fires decreased by 64 from the 287 reported during the previous year. Motor vehicle fires decreased by 12 from 54 the year before. The number of outside and other fires decreased by 41 from 294 in 2007.

HAMPSHIRE COUNTY FIRES FROM 2004 TO 2008

Year	Total Fires	Structure Fires	Vehicle Fires	Other Fires	Total Arsons	Structure Arsons	Vehicle Arsons	Other Arsons
2004	536	238	79	219	60	13	4	43
2005	540	214	66	260	44	7	0	37
2006	664	224	67	373	82	5	3	74
2007	635	287	54	294	34	7	0	27
2008	518	223	42	253	51	1	2	48

Fire and Fire Death Rates

Hampshire County had 3.4 fires per 1,000 population. That figure ranks Hampshire County twelfth in the state and below the state rate of 4.8 fires per 1,000 population. Hampshire County also had 0.13 fire deaths per 10,000 population ranking it tied for second among Massachusetts counties and above the state rate of 0.08 fire deaths per 10,000 population.

2 Hampshire County Residents Killed in 2 Fires

- On January 14, 2008, at 11:48 a.m., the Ware Fire Department was called to a fatal electrical fire in a four-unit apartment building that took the life of a 59-year old woman. The fire was caused by an arcing electrical wire in the space between the ceiling and the floor above it. The fire started right under the victim's bedroom. One firefighter was injured at this fire. Detectors were present and operated. Sprinklers were not present. Damages from the blaze were estimated to be \$75,000.

- On November 23, 2008, at 10:59 a.m., the Hadley Fire Department was called to a fatal smoking fire in a 15-room hotel. The victim, a 56-year old physically disabled woman was smoking while on home oxygen. The fire started while the victim was trying to light a cigarette. No one else was injured at this fire. Detectors were present and alerted the other occupants of the building. Sprinklers were not present. Damages from the fire were estimated to be \$80,000.

Ware Has Hampshire County's Largest Loss Fire

- On November 21, 2008, at 4:35 p.m., the Ware Fire Department was called to a cooking fire at a bank. The fire began on an in a basement break room. There were no injuries associated with this fire. Detectors were present and alerted the occupants. The building was not sprinklered. Damages from the blaze were estimated to be \$1,000,000.

STRUCTURE FIRES

Reported Structure Fires Down

The 223 structure fires caused two civilian deaths, 12 civilian injuries, six fire service injuries and an estimated dollar loss of \$5.8 million. These incidents represented 43% of Hampshire County's reported fires in 2008. The average estimated dollar loss per structure fire was \$25,890. The total number of reported structure fires decreased by 64, or 22%, from the 287 reported in 2007.

One Structure Arson

The one structure arson caused an estimated dollar loss of \$50. Arson was indicated as the cause of less than 1% of the structure fires and less than 1% of Hampshire County's structure fire dollar loss. The one structure arson accounted for 2% of the Hampshire County arson fires reported in 2008. The total number of reported structure arsons decreased by six, or 86%, from seven in 2007.

1 Structure Arson Occurred at a High School

The one reported structure arson, or 100%, of Hampshire County's structure arsons occurred at the Amherst Regional Senior High School.

BUILDING FIRES

There were 221 building fires of different types in Hampshire County in 2008. These 221 building fires accounted for 99.1% of all structure fires in Hampshire County.

80% of Hampshire Building Fires Occurred in People's Homes

One hundred and seventy-seven (177), or 80%, of Hampshire County's 221 building fires occurred in residential occupancies. Special properties experienced 12 fires. Mercantile and business properties had nine fires. Seven (7) fires occurred in storage facilities. Six (6) fires occurred in educational facilities. Five (5) fires took place each in public assembly properties, including restaurants and churches, and in storage facilities.

Hospitals, prisons, and other institutional buildings experienced four fires. One fire in Hampshire County in 2008 occurred in a manufacturing or processing facility.

RESIDENTIAL FIRES

Residential Building Fires Down

There were 177 reported residential building fires in Hampshire County in 2008. This is a decrease of 56 fires, or 24%, from the 233 residential fires Hampshire County fire departments reported to MFIRS in 2007.

1- & 2-Family Homes Accounted for Almost 2/3 of Residential Building Fires

The peak fixed property uses for residential building fires were 1- & 2-family homes, accounting for 64% of the building fires in Hampshire County; 25% occurred in apartments; 6% occurred in dormitories; 2% happened in rooming houses, and 1% occurred in hotels or motels. Two percent (2%) of the residential building fires in Hampshire County occurred in unclassified residential buildings.

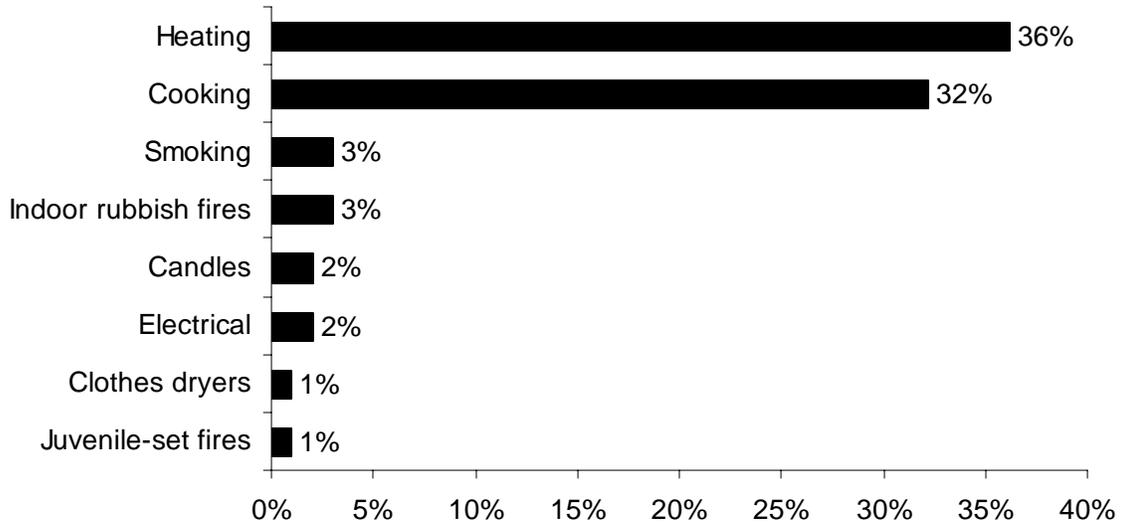

Although much of Hampshire County is rural, the county is home to several colleges and the main campus of the University of Massachusetts. Ten (10), or 6%, of Hampshire County's residential fires occurred in dormitories. Dormitory fires make up smaller percentages of the other counties' fires. In 2008, none of the structure arsons in Hampshire County occurred in dormitories.

Heating Equipment Fires Cause Over 36% of Residential Fires

The leading cause of the 177 residential building fires in Hampshire County was heating equipment fires accounting for 36% of home fires. Unattended cooking and other unsafe cooking practices accounted for 32% of these fires in Hampshire County. Smoking and indoor rubbish fires each accounted for 3% of these fires. Candles and electrical problems each caused 2% of these fires. Clothes dryer fires and juvenile-set fires each accounted for 1% of the residential fires in Hampshire County in 2008.

During the past five years, cooking and heating equipment have both been the leading cause of Hampshire County's residential fires. In 2008, 2007 and in 2005, heating was the leading cause of residential fires in Hampshire and cooking was the second leading cause. In 2006 and 2004 cooking fires were the leading cause of residential fires and heating fires were the second leading cause.

2008 Leading Causes of Fires in Hampshire County Homes

63% of Residential Building Fires Are Confined to Non-Combustible Containers¹

One hundred and eleven (111), or 63% of all residential building fires were reported as confined to non-combustible containers in 2008. Forty-seven (47) of the reported fires were cooking fires contained to a non-combustible container accounting for 27% of residential building fires. Forty (40), or 23%, of all residential building fires reported in 2008 were fires confined to a chimney. Nineteen (19), or 11%, were fires confined to a fuel burner or boiler malfunction. Five (5), or 3%, of these fires were rubbish fires contained to a non-combustible container in Hampshire County in 2008.

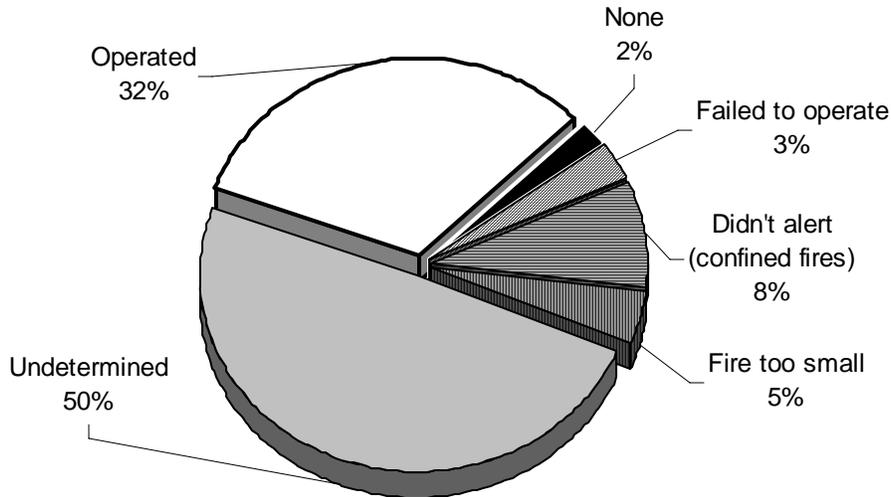

Undetected if Detectors Operated in 1/2 of Fires

Smoke or heat detectors operated and alerted the occupants in 57, or 32%, of the residential building fires. In 8% of these fires², the detectors did not alert the occupants. Detectors were present but did not operate in 3% of these incidents. In 2% of these fires, no detectors were present at all. The fire was too small to trigger the detector in 5% of the residential fires. Smoke detector performance was undetermined in 87 incidents, or 50% of Hampshire County's residential building fires.

¹ In MFIRS v5 a fire in a building contained to a non-combustible container (Incident Type = 113-118) does not have to have a Fire Module completed. Therefore the following data fields do not need to be completed: Area of Origin, Detector Status, Item First Ignited, Heat Source, Factors Contributing to Ignition, Cause of Ignition, and Equipment Involved In Ignition. These incidents are not included in the analysis of these fields.

² These represent confined fires where it was reported that the detector did not alert the occupants.

Detector Status in Hampshire County's Residential Structure Fires 2008

17% Failed Detectors Had Missing or Disconnected Batteries

In one of the six fires where smoke detectors were present but failed to operate, they failed because the batteries were either missing or disconnected. Another detector failed to operate because it was defective; and another detector failed because of a dead battery. It was undetermined in three cases why the detector failed.

VACANT BUILDINGS

3% of Building Fires Occurred in Vacant Buildings

Hampshire County reported seven fires that occurred in buildings that were vacant, under construction or demolition³. This represented 3% of the total 221 building fires reported to MFIRS in 2008. Three (3) fires occurred in vacant residential properties. Storage facilities accounted for another three vacant building fires. Mercantile and business properties reported one vacant building fire incidents in Hampshire County in 2008.

None, of the vacant building fires in Hampshire County in 2008 were determined to be intentionally set.

³ In version 4 a vacant building was defined by having a Fixed Property Use code in the subsection of construction, unoccupied properties, between 910 & 919. However in version 5, the Property Use is separate from the Building Status. In v5 a building is considered vacant if the Building Status is coded: 1- Under Construction; 3-Idle, not routinely used; 4-Under major renovation; 5-Vacant, secured; 6-Vacant, unsecured; & 7-Being demolished. The building use is coded separately in the Property Use field.

JUVENILE-SET FIRES

3 Juvenile-set Fires

There were three reported juvenile-set fires in Hampshire County in 2008. The one structure fire, one brush fire and one outside rubbish fires caused an \$110,000 in estimated damages.

ARSONS

51 Total Arsons — 1 Structures, 2 Motor Vehicle & 48 Other Arsons

Fifty-one (51), or 10%, of Hampshire County's 518 fires were intentionally set, or, for purposes of this analysis, arson⁴. The one structure arson, two motor vehicle arsons and 48 outside and other arsons caused an estimated dollar loss of \$14,909.

Motor Vehicle & Outside Arson Up

The total number of reported arson fires increased by 17 from the 34 reported in 2007. Structure arsons decreased by six from the seven reported the previous year. Motor vehicle arsons increased by two from none in 2007. Reported outside and other arsons increased 21 from the 27 reported in 2007.

ALL INCIDENTS

Rescue & EMS Calls Are 1/2 of All Reported Responses

In 2008, Hampshire County fire departments reported 10,679 responses⁵ to MFIRS. Of these 10,679 incidents, 10,060 non-fire calls were voluntarily reported.

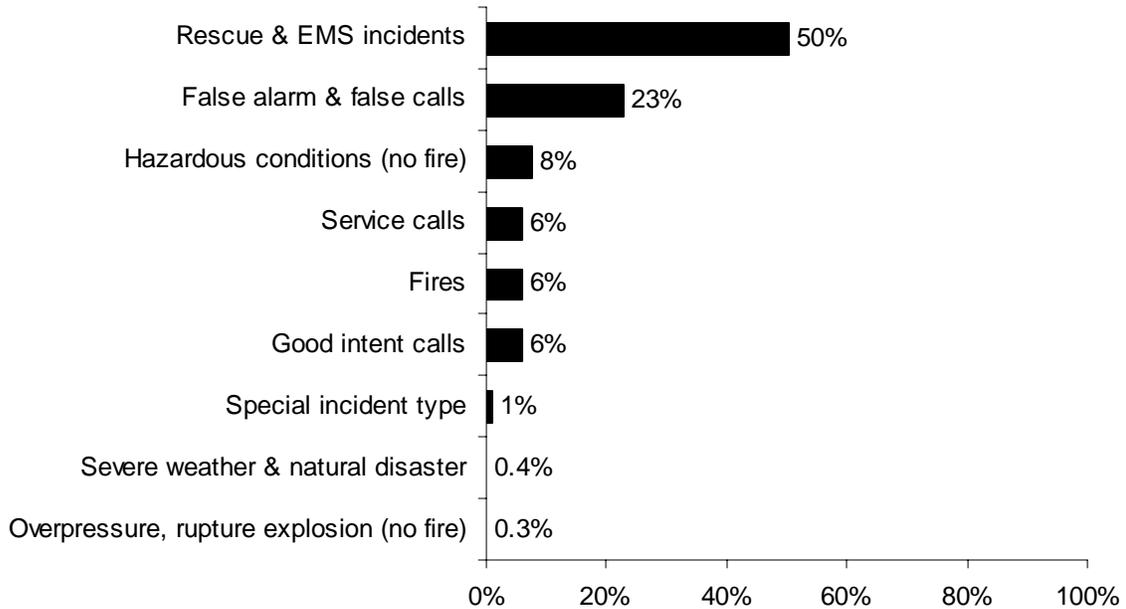

Of these 10,060 non-fire calls, 5,359, or 50% of all the responses reported in 2008, were reported rescue and emergency medical services (EMS) calls; 2,425, or 23%, were reported false alarm or false calls; 805, or 8%, were reported hazardous condition calls with no fire; 685, or 6%, were reported service calls such as lock-outs, water or smoke problems, unauthorized burning or public service assistance; 596, or 6%, were reported good intent calls; 111 or 1%, were special incident type calls such as citizen complaints; 45, or 0.4%, were severe weather responses; and 34, or 0.3%, were reported overpressure, rupture, explosion or overheat calls with no fire.

Six hundred and nineteen (619), or 6% of the total responses submitted by Hampshire County fire departments were fires.

⁴ In MFIRS v5 a fire is considered an arson if the Cause of Ignition = 1 (Intentional) and the Age of Person (Fire Module) is greater than 17 or if the field is blank; or if the Wildland Module is used, the Wildland Fire Cause = 7 (Incendiary) and the Age of the Person (Wildland Module) is greater than 17 or if the field is left blank.

⁵ These figures include responses in which Hampshire County fire departments gave mutual aid to other fire departments.

2008 Responses by Incident Type

Hampshire County Fire Departments Gave Mutual Aid 393 Times

In 2008, Hampshire County fire departments reported coming to the aid of other fire departments 393 times. Of these 393 responses, 146, or 37%, were for rescue or EMS calls; 133, or 34%, were for fires; 49, or 12%, were for service calls such as cover assignments; 30, or 8%, were for false alarms or false calls; 17, or 4%, were for good intent calls; 16, or 4%, were hazardous conditions calls with no fire; and two, or 1%, were severe weather calls.

Hampshire County Received Mutual Aid in 136 Incidents

In 2008, Hampshire County fire departments received aid from surrounding departments in 136 incidents. Of these 136 incidents, 76, or 56%, were rescue and emergency medical services calls; 44, or 32%, were for fires; seven, or 5%, were false alarm or false calls; six, or 4%, was a hazardous conditions call with no fire; one, or 1%, was a service call; one call, or 1% was an overpressure or rupture explosion with no fire; and another call was a special incident type call also accounting for 1% of the mutual aid calls received in Hampshire County in 2008.

⁶ This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

⁷ These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Heat Source from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires, but is sometimes voluntarily reported.

Item First Ignited⁸	%	Factor Contrib. to Ignit.	%	%Unconfined⁹

Undetermined	63%

⁸ This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

⁹ Some fields in version 5 allow for multiple entries. Therefore the number of entries may be greater than the actual number of incidents being analyzed. These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Factors Contributing to Ignition from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires.

¹⁰ This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

¹¹ These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Cause of Ignition from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires.

Middlesex County Fires 2008

2008 Fires

Middlesex County Fires in 2008

5,260 Total Fires — 3,402 Structures, 506 Vehicles & 1,352 Other Fires

Middlesex County ranked second out of the fourteen Massachusetts counties in total reported fires. Middlesex County fire departments reported 5,260 fires to the Massachusetts Fire Incident Reporting System (MFIRS) in 2008. The 3,402 structure fires, 506 motor vehicle fires, 608 brush fires, 414 outside rubbish fires, 124 special outside fires, five cultivated vegetation or crop fires, and 201 unclassified fires caused seven civilian deaths, 56 civilian injuries, 136 fire service injuries and an estimated dollar loss of \$48.5 million. Middlesex County's fires accounted for 17% of the 30,136 Massachusetts fires reported in 2008.

All 55, or 100%, of the fire departments in Middlesex County either reported incidents to the Massachusetts Fire Incident Reporting System (MFIRS) or certified that they had no reportable fires in 2008.

Structure Fires Up & Outside & Other Fires Down

The total number of reported fire incidents decreased by 498 from the 5,758 reported in 2007. Reported structure fires were up 195 from 3,207 in the previous year. Motor vehicle fires decreased by 63 from the 569 reported during 2007. Reported outside and other fires decreased by 630 from 1,982 the year before.

Brush Fires Down by 35%

Brush fires decreased by 331, or 35%, from the 939 reported in 2008. This is a major decrease and the main reason for the drop in all Middlesex County fires.

MIDDLESEX COUNTY FIRES FROM 2004 TO 2008

Year	Total Fires	Structure Fires	Vehicle Fires	Other Fires	Total Arsons	Structure Arsons	Vehicle Arsons	Other Arsons
2004	4,501	2,746	578	1,177	146	44	23	79
2005	5,029	2,819	633	1,577	154	48	24	82
2006	5,344	3,171	564	1,609	171	52	24	95
2007	5,758	3,207	569	1,982	173	63	16	94
2008	5,260	3,402	506	1,352	174	40	27	107

Fire and Fire Death Rates

Middlesex County had 3.6 fires per 1,000 population. That figure ranks Middlesex County tenth in the state and below the state rate of 4.8 fires per 1,000 population. Middlesex County also had 0.05 fire deaths per 10,000 populations ranking it eleventh among Massachusetts counties and below the state rate of 0.08 fire deaths per 10,000 population.

7 Fatal Fires Killed 7 Middlesex County Residents

- On January 16, 2008, at 2:09 a.m., the Wakefield Fire Department was called to a fatal arson car fire that was a successful attempt at self-immolation. The victim, a 49-year old man, poured gasoline inside of the car and ignited it. He died from smoke inhalation and burns. No one else was injured in this fire, and damages were not estimated.
- On January 25, 2008, at 4:18 a.m. the Newton Fire Department was called to a fatal smoking fire in a 2-family home. The fire began in a first floor closet. One of the residents left his pipe in his coat in the closet. The 83-year old victim, a woman, was sleeping at the time of the fire. Rescuers found her in her second floor bedroom and brought her outside. She was transported to a local hospital where she succumbed to her injuries. There was one other civilian injury and five firefighter injuries at this fire. Smoke detectors were present but failed to operate because of improper installation. Sprinklers were not present. Damages from this fire were estimated to be \$600,000.
- On February 21, 2008, at 12:33 a.m., the Lowell Fire Department was called to a fatal clothes dryer fire at a nursing home. The fire started in the laundry room and three sprinkler heads suppressed it. The 51-year old victim, was a female employee who collapsed after she helped evacuate some of the nursing home's residents. She was transported to a local hospital where she died from cardiac arrest. Detectors were present and alerted the occupants. No one else was injured in this fire, and damages were not estimated.
- On March 14, 2008, at 7:42 p.m., the Arlington Fire Department was called to a fatal cooking fire at a 100-unit apartment building. The victim, a 92-year old woman, was trying to make a cup of tea. She got too close to the burner and her clothing ignited. When firefighters arrived, they discovered the victim on the floor of her kitchen. She was the only thing that burned. No one else was injured at this fire. Detectors and sprinklers were both present but the fire was too small to activate them. Damages from the blaze were estimated to be \$10,000.
- On September 13, 2008, at 4:50 a.m., the Lexington Fire Department was called to a fatal clothes dryer fire in a single-family home. The heat from the dryer ignited the lint in the vent pipe. It smoldered in the pipe until it broke into an open fire, came out the vent pipe and traveled up the exterior of the house and into the first floor. The victim, a 48-year old woman was overcome by the heat and smoke as she attempted to escape. Her two daughters were able to escape out a window and onto the garage. Detectors were present but it was undetermined if they operated. There were no sprinklers. Damages were estimated to be \$400,000.
- On November 2, 2008 at 9:12 p.m., the Hopkinton Fire Department was called to a fatal heating fire in a single-family home. The 53-year old male victim could be characterized as a hoarder. He placed combustibles too close to the coal burning stove. Radiated heat from the coal stove ignited the rubbish nearby starting the fire in

the first floor living room. He was overcome by the heat and smoke as he was attempting to escape. No one else was injured at this fire. Detectors and sprinklers were not present. Damages were estimated to be \$257,700.

- On November 25, 2008 at 3:31 a.m., the Cambridge Fire Department was called to a fatal fire of undetermined cause in a six-unit apartment building. The five-alarm fire was fought by 99 firefighters. The victim, an 84-year old woman, was asleep at the time of the fire. She was rescued by firefighters and transported to a local hospital. She died days later succumbing to her injuries. The victim's 80-year old husband and three firefighters were also injured at this fire. It was undetermined if smoke detectors were present. The building had no sprinklers and damages from this fire were estimated to be \$2,260,000.

Largest Loss Fires in 2008

In 2008, Middlesex County fire departments reported 10 fires with a reported dollar loss of \$1 million or greater. The combined dollar loss of these 10 fires totaled \$17.3 million, or 36% of the county's total dollar loss. Newton had three of these fires, and Cambridge had two.

- On April 11, 2008, at 12:21 p.m., the Framingham Fire Department was called to a fire at 72-unit apartment complex. A plumber working in a second floor bathroom accidentally ignited the lining of a plumbing chase with his torch. The fire smoldered undetected before erupting into open flames. Two (2) civilians and 13 firefighters were injured at this fire. Detectors were present and alerted the occupants. The building was not sprinklered. Damages from this fire were estimated to be \$3 million.
- On September 17, 2008, at 2:45 p.m., the Lincoln Fire Department was called to a fire in a two-family home. The fire was caused by a mechanical failure on the second floor. No one was injured at this fire. Detectors were present and alerted the occupants. It was undetermined if sprinklers were present. Damages from this fire were estimated to be \$2.85 million.

STRUCTURE FIRES

Reported Structure Fires Up

The 3,402 structure fires caused six civilian deaths, 49 civilian injuries, 131 fire service injuries and an estimated dollar loss of \$44.3 million. These incidents represented 65% of Middlesex County's reported fires in 2008. The average estimated dollar loss per structure fire was \$13,018. The total number of reported structure fires increased by 195, or 16%, from the 3,207 reported in 2007.

Arson Caused of 1% of Structure Fires

The 40 structure arsons caused one civilian injury, two fire service injuries and an estimated dollar loss of \$1.7 million. Arson was indicated as the cause of 1% of the structure fires and 4% of Middlesex County's structure fire dollar loss. The 40 structure

arsons accounted for 23% of the Middlesex County arson fires reported in 2008. The total number of reported structure arsons decreased by 23, or 37%, from 63 in 2007.

58% of Structure Arsons Occurred in Residences

Fifty-eight percent (58%) of Middlesex County's 40 structure arsons occurred in residential occupancies; 15% happened in educational facilities; 10% happened at storage facilities; 5% occurred in public assembly buildings; another 5% occurred in mercantile or business properties; 5% occurred in special properties; and 3% occurred in manufacturing or processing facilities.

BUILDING FIRES

There were 3,362 building fires of different types in Middlesex County in 2008. These 3,362 building fires accounted for 98.8% of all structure fires in Middlesex County.

79% of Middlesex Building Fires Occurred in People's Homes

Two thousand six hundred and fifty (2,650), or 79%, of Middlesex County's 3,362 building fires occurred in residential occupancies. One hundred and fifty-nine (159) fires took place in public assembly properties, including restaurants and churches. Mercantile and business properties had 152 fires. One hundred and nine (109) building fires in Middlesex County occurred in special properties such as outbuildings, bus stop shelters and telephone booths. One hundred and two (102) building fires took place in educational facilities. Hospitals, prisons, and other institutional buildings experienced 101 fires. Forty-five (45) fires took place in storage properties. Twenty-three (23) fires occurred in industrial, utility, defense, agricultural or mining facilities. Twenty (20) fires took place in manufacturing and processing facilities, and one fire occurred in unclassified buildings in Middlesex County in 2008.

RESIDENTIAL FIRES

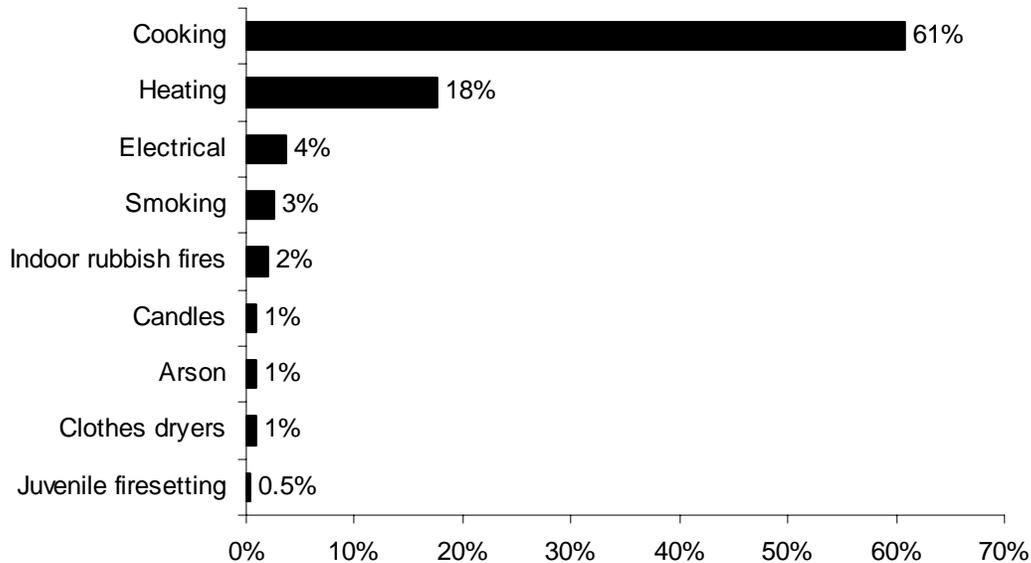

Residential Building Fires Are Up

There were 2,650 reported residential building fires in Middlesex County in 2008. These 2,650 fires are an increase of 117, or 5%, from the 2,533 residential building fires reported in 2007.

Unsafe Cooking Causes 61% of All Residential Fires

The leading cause of residential building fires in Middlesex County was unattended cooking and other unsafe cooking practices, accounting for 61% of these fires. Heating caused 18% of fires in people's homes. Electrical problems caused 4%, and smoking caused 3% of these fires. Indoor rubbish fires accounted for 2% of these fires; and candles, arsons, clothes dryers and juvenile-set fires each caused 1% of the residential fires in Middlesex County in 2008.

2008 Leading Causes of Fires in Middlesex County Homes

76% of Residential Building Fires Are Confined to Non-Combustible Containers¹

Two thousand nineteen (2,019), or 76%, of all residential building fires were reported as confined to non-combustible containers in 2008. One thousand five hundred and thirty-five (1,535) of the reported fires were cooking fires contained to a non-combustible container accounting for 58% of residential building fires. Three hundred and seven (307), or 12%, were fires confined to a fuel burner or boiler malfunction. One hundred and seventeen (117), or 4%, of all residential building fires reported in 2008 were fires confined to a chimney. Fifty-nine (59), or 2%, of these fires were rubbish fires contained to a non-combustible container. One commercial compactor fire confined to the rubbish accounted for less than 1% of the residential fires in Middlesex County in 2008.

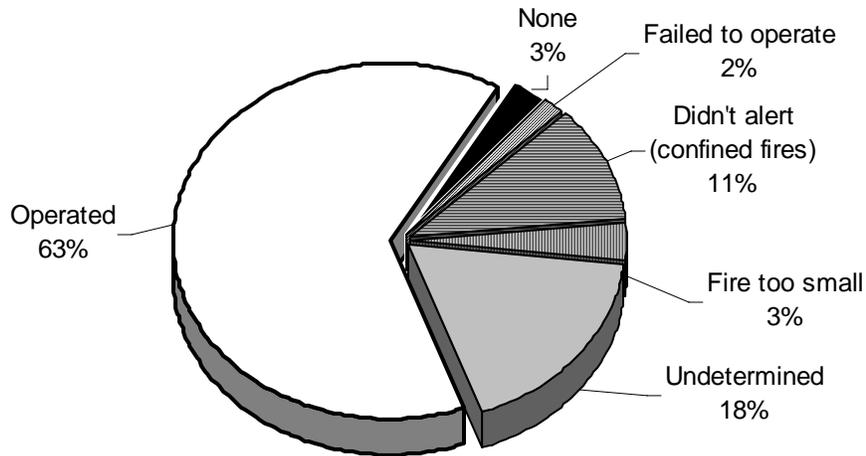

Detectors Alerted Occupants in Almost 2/3 of Fires

Smoke or heat detectors operated and alerted the occupants in 1,691, or 63%, of the residential building fires. In 11% of these fires², the detectors did not alert the occupants. Detectors were present but did not operate in 2% of these incidents. In 3% of these fires, no detectors were present at all. The fire was too small to trigger the detector in 3% of the residential fires. Smoke detector performance was undetermined in 473 incidents, or 18% of Middlesex County's residential building fires.

¹ In MFIRS v5 a fire in a building contained to a non-combustible container (Incident Type = 113-118) does not have to have a Fire Module completed. Therefore the following data fields do not need to be completed: Area of Origin, Detector Status, Item First Ignited, Heat Source, Factors Contributing to Ignition, Cause of Ignition, and Equipment Involved In Ignition. These incidents are not included in the analysis of these fields.

² These represent confined fires where it was reported that the detector did not alert the occupants.

Detector Status in Middlesex County's Residential Structure Fires 2008

1/5 of Failed Detectors Had Missing or Disconnected Batteries

Of the 46 fires where smoke detectors were present but failed to operate, nine, or 20%, failed because the batteries were either missing or disconnected. Eight (8), or 17%, did not operate because of dead batteries. Four (4) detectors, or 9%, failed from a lack of maintenance. Three (3), or 7%, failed because of a power failure, shutoff or disconnect. One (1) unit, or 2%, failed because of improper installation or placement. It was undetermined or unclassified in 21 cases, or 46%, why the detectors failed to operate.

VACANT BUILDINGS

1% of Building Fires Occurred in Vacant Buildings

Middlesex County reported 44 fires that occurred in buildings that were vacant, under construction or demolition³. This represented 1% of the total 3,362 building fires reported to MFIRS in 2008. Twenty-six (26) fires occurred in vacant residential properties. Six (6) vacant building fires occurred in storage facilities. Industrial facilities, public assembly properties and special properties each accounted for three vacant building fire incidents. Manufacturing or processing facilities accounted for two of these fires. Institutional facilities accounted for one vacant building fire in Middlesex County in 2008.

Five (5), or 11%, of the vacant building fires in Middlesex County in 2008 were determined to be intentionally set. Three (3) of these fires occurred in single-family

³ In version 4 a vacant building was defined by having a Fixed Property Use code in the subsection of construction, unoccupied properties, between 910 & 919. However in version 5, the Property Use is separate from the Building Status. In v5 a building is considered vacant if the Building Status is coded: 1- Under Construction; 3-Idle, not routinely used; 4-Under major renovation; 5-Vacant, secured; 6-Vacant, unsecured; & 7-Being demolished. The building use is coded separately in the Property Use field.

homes. A vacant building fire also occurred in a manufacturing or processing facility and a warehouse.

JUVENILE-SET FIRES

34 Juvenile-set Fires

There were 34 reported juvenile-set fires in Middlesex County in 2008. The 17 structure fires, eight brush fires, three outside rubbish fires, three special outside fires, and three unclassified fires caused three civilian injuries, one fire service injury and \$214,650 in estimated damages.

ARSONS

174 Total Arsons⁴ — 40 Structures, 27 Vehicles & 107 Other Arsons

One hundred and seventy-four (174), or 3%, of Middlesex County's 5,260 fires were considered intentionally set, or, for purposes of this analysis, arson. The 40 structure arsons, 27 motor vehicle arsons and 107 outside and other arsons caused one civilian death, two civilian injuries, two fire service injuries and an estimated dollar loss of \$1.8 million.

Structure Arsons Down – MV Arson Up

The total number of reported arson fires increased by one from the 173 reported in 2007. Reported structure arsons decreased by 23 from the 63 reported in the previous year. Motor vehicle arsons increased by 11 from the 16 in 2007. Reported outside and other arsons increased by 13 from 94 the year before.

ALL INCIDENTS

Rescue & EMS Calls Are Over 1/2 of All Reported Responses

In 2008, fire departments in Middlesex County reported 144,748 responses⁵ to MFIRS. This is a 3% increase over the 140,629 responses reported in 2007. Of these 144,748 incidents, 139,279 non-fire calls were voluntarily reported.

Of these 139,279 non-fire calls, 74,464 or 51% of all the responses reported in 2008, were reported rescue and emergency medical services (EMS) calls; 26,138 or 18%, were reported false alarm or false calls; 14,857, or 10%, were reported service calls such as lock-outs, water or smoke problems, unauthorized burning or public service assistance; 10,080, or 7%, reported hazardous condition calls with no fire; 7,993, or 6%, were reported good intent calls; 5,277, 4%, were special incident type calls such as citizen

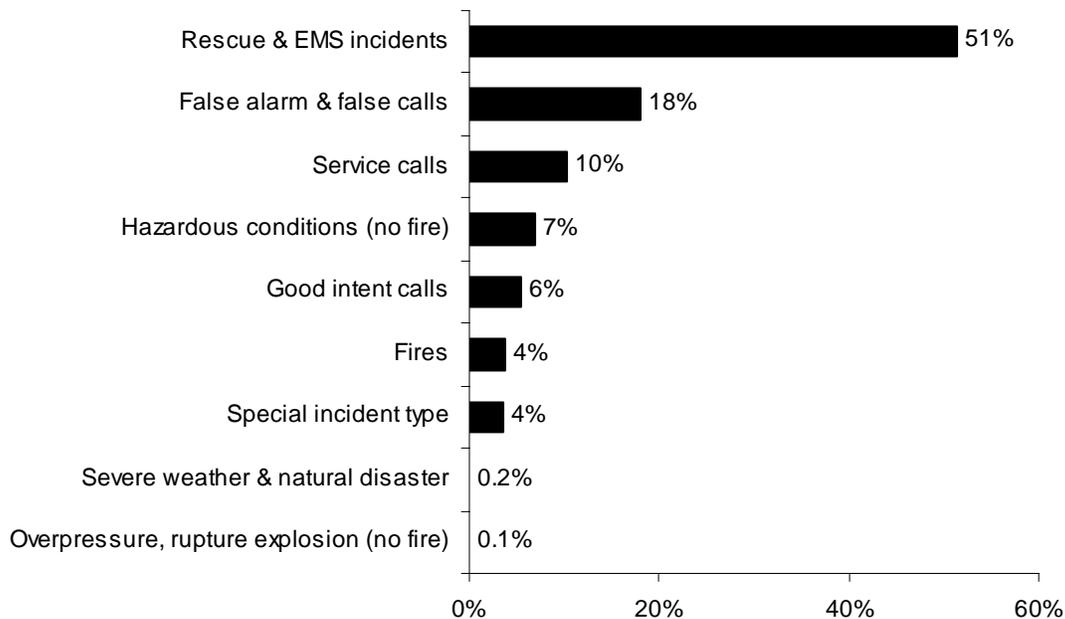

⁴ In MFIRS v5 a fire is considered an arson if the Cause of Ignition = 1 (Intentional) and the Age of Person (Fire Module) is greater than 17 or if the field is blank; or if the Wildland Module is used, the Wildland Fire Cause = 7 (Incendiary) and the Age of the Person (Wildland Module) is greater than 17 or if the field is left blank.

⁵ These figures include incidents in which Middlesex County fire departments gave mutual aid to other fire departments.

complaints; 281, or 0.2%, were severe weather responses; 189, or 0.1%, were reported overpressure, rupture, explosion or overheat calls with no fire.

Five thousand four hundred and sixty-nine (5,469), or 4%, of the total responses submitted by Middlesex County fire departments were fires.

2008 Responses by Incident Type

Middlesex County Fire Departments Gave Mutual Aid 2,531 Times

In 2008, Middlesex County fire departments reported coming to the aid of other fire departments 2,531 times. Of these 2,531 responses, 1,282, or 51%, were for rescue or EMS calls; 606 or 24%, were for service calls such as cover assignments; 238, or 9%, were for good intent calls; 209, or 8%, were for fires; 111, or 4%, were for false alarms or false calls; 53, or 2%, were for hazardous conditions calls with no fire; 26, or 1%, were special incident types; four, or less than 1%, were severe weather calls; and two, or less than 1%, were for reported overpressure, rupture, explosion or overheat calls with no fire.

Middlesex County Received Mutual Aid in 2,204 Incidents

In 2008, Middlesex County fire departments reported receiving aid from surrounding departments in 2,204 incidents. Of these 2,204 incidents, 1,365, or 67%, were rescue and emergency medical services calls; 295, or 15%, were for fires; 210, or 10%, were false alarms or false calls; 62, or 3%, were hazardous conditions calls with no fire; 44, or 2%, were service calls; 38, or 2%, were good intent calls; four, or less than 1% were overpressure, rupture, explosion or overheat calls with no fire; another four, or less than 1% were severe weather calls; and two, or less than 1%, were special incident types.

Cambridge Fires in 2008

860 Total Fires — 748 Structures, 14 Vehicles & 98 Other Fires

The Cambridge Fire Department reported 860 fires to the Massachusetts Fire Incident Reporting System (MFIRS) in 2008. The 523 structure fires, 14 motor vehicle fires, 56 outside rubbish fires, 33 brush fires, seven special outside fires and two unclassified fires caused one civilian death, three civilian injuries, 25 fire service injuries and an estimated dollar loss of \$6.5 million.

1 Cambridge Woman Killed in Undetermined Apartment Fire

- On November 25, 2008 at 3:31 a.m., the Cambridge Fire Department was called to a fatal fire of undetermined cause in a six-unit apartment building. The five-alarm fire was fought by 99 firefighters. The victim, an 84-year old woman, was asleep at the time of the fire. She was rescued by firefighters and transported to a local hospital. She died days later succumbing to her injuries. The victim's 80-year old husband and three firefighters were also injured at this fire. It was undetermined if smoke detectors were present. The building had no sprinklers, and damages from this fire were estimated to be \$2,260,000.

Structure Fires Increased in 2008

Total fires increased by 119, or 29%, from 669 incidents reported in 2007. Reported structure fires increased by 225, or 43%, from the 523 reported during the previous year. Motor vehicle fires decreased six, or 30%, from 20 the year before. Outside and other fires decreased by 28 from the 126 reported the year before; this is a decrease of 22%.

CAMBRIDGE FIRES FROM 2004 TO 2008

	Total Fires	Structure Fires	Vehicle Fires	Other Fires	Total Arsons	Structure Arsons	Vehicle Arsons	Other Arsons

2005	482	354	30	98	13	7	1	5
2006	630	495	33	102	15	6	1	8
2007	669	523	20	126	7	5	0	2
2008	860	748	14	98	9	2	0	7

BUILDING FIRES

There were 744 building fires of different types in Cambridge in 2008. These 774 building fires accounted for 99.5% of all structure fires in Cambridge.

Over 3/4 of Building Fires in Homes

The 774 building fires that occurred in Cambridge in 2008 can be broken down by fixed property use as follows: 574, or 77% of all structure fires, were in residential properties; 42 occurred in public assembly properties; 37 fires occurred in mercantile or business properties; 35 fires happened in educational facilities; 30 occurred in special properties;

13 fires took place in institutional properties; nine occurred in industrial, utility, defense, agricultural or mining facilities; and four occurred in storage facilities.

RESIDENTIAL FIRES

Residential Building Fires Are Up

There were 574 reported residential building fires in Cambridge in 2008. These 574 fires are an increase of 165, or 40%, from the 409 residential building fires reported in 2007.

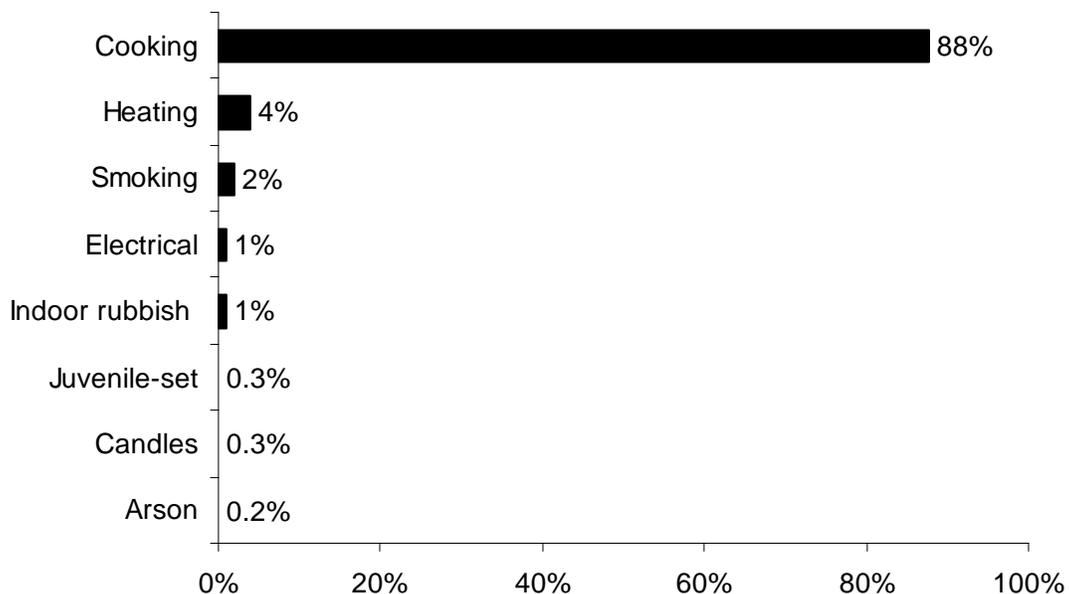

Apartments Accounted for Over 1/2 of Residential Building Fires

The peak fixed property uses for residential building fires were apartments, accounting for 56% of the residential building fires in Cambridge; 17% occurred in dormitories; 10% occurred in 1- or 2-family homes; 2% happened in rooming houses; another 2% occurred in hotels or motels; 1% happened in residential board and care facilities; and 10% occurred in unclassified residences.

Unattended Cooking Caused 88% of Residential Fires

The leading cause of residential building fires in Cambridge was unattended cooking and other unsafe cooking practices, accounting for 88% of these fires. Heating equipment caused 4% of the residential fires in Cambridge. Smoking caused 2% of these fires. Electrical problems and indoor rubbish fires were each responsible for 1% of fires in people's homes. Juvenile-set fires, candles and arsons each caused less than 1% of the fires in Cambridge homes in 2008.

2008 Leading Causes of Fires in Cambridge Homes

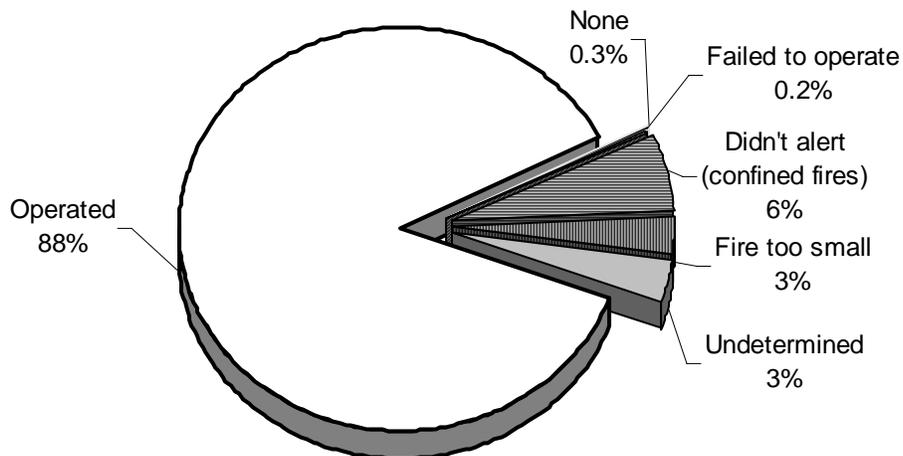

89% of Residential Building Fires Are Confined to Non-Combustible Containers¹

Five hundred and eleven (511), or 89% of all residential building fires were confined to non-combustible containers in 2008. Four hundred and ninety (490), or 85%, of all residential building fires reported in 2008 were cooking fires contained to a non-combustible container. Fourteen (14), or 2%, were fires confined to a fuel burner or boiler malfunction. Five (5), or 1%, of these fires were rubbish fires contained to a non-combustible container. Two (2) fires, or less than 1%, were confined to a chimney or flue in Cambridge in 2008.

Detectors Alerted Occupants in 88% of Fires

Smoke or heat detectors operated and alerted the occupants in 499, or 87%, of the residential building fires. In 6% of these fires², the detectors did not alert the occupants. Detectors were present but failed to operate in less than 1% of these fires. In less than 1% of these fires, no detectors were present at all. The fire was too small to trigger the detector in 3% of the residential fires. Smoke detector performance was undetermined in 19 incidents, or 3% of Cambridge's residential building fires.

Detector Status in Cambridge Residential Fires 2008

1 Failed Detector

It was undetermined in the one case why the detector failed to operate.

¹ In MFIRS v5 a fire in a building contained to a non-combustible container (Incident Type = 113-118) does not have to have a Fire Module completed. Therefore the following data fields do not need to be completed: Area of Origin, Detector Status, Item First Ignited, Heat Source, Factors Contributing to Ignition, Cause of Ignition, and Equipment Involved In Ignition. These incidents are not included in the analysis of these fields.

² These represent confined fires where it was reported that the detector did not alert the occupants.

VACANT BUILDINGS

2 Building Fires Occurred in Vacant Buildings

Cambridge reported two fires that occurred in buildings that were vacant, under construction or demolition³. This represented 0.3% of the total 744 building fires reported to MFIRS in 2008. A single-family home and a laboratory were reported as vacant building fire incidents.

JUVENILE-SET FIRES

3 Juvenile-set Fires

There were three juvenile-set fires in Cambridge in 2008. The two structure fires and one outside mailbox fire caused one civilian injury, one fire service injury and \$63,550 in estimated damages.

ARSONS

9 Total Arsons⁴ — 2 Structure, 0 Motor Vehicle & 7 Other or Outside Arsons

Nine (9), or 1%, of Cambridge's 860 fires were considered intentionally set, or, for purposes of this analysis, arson. The two structure arsons and seven outside arsons caused an estimated dollar loss of \$10,100.

Outside Arsons Are Up

The total number of arsons increased by two, or 29%, from the seven arsons that were reported in 2007. Reported structure arsons decreased by three from five the year before. There were no reported motor vehicle arsons in 2008 or in 2007. Outside and other arsons increased by five from the two reported in 2007.

Rescue & EMS Calls Are 46% of All Reported Incidents

In 2008, Cambridge voluntarily reported 13,760 incidents to MFIRS. Of these 13,760 incidents, 12,899, or 94%, were non-fire incidents.

Of these 12,899 non-fire incidents 6,341, or 46% of all the incidents reported in 2008, were reported rescue and emergency medical services (EMS) calls; 3,314, or 24%, were reported false alarm or false calls; 1,756, or 13%, were reported good intent calls; 858, or 6%, were reported hazardous condition calls with no fire; 591, or 4%, were reported service calls such as lock-outs, water or smoke problems, unauthorized burning or public

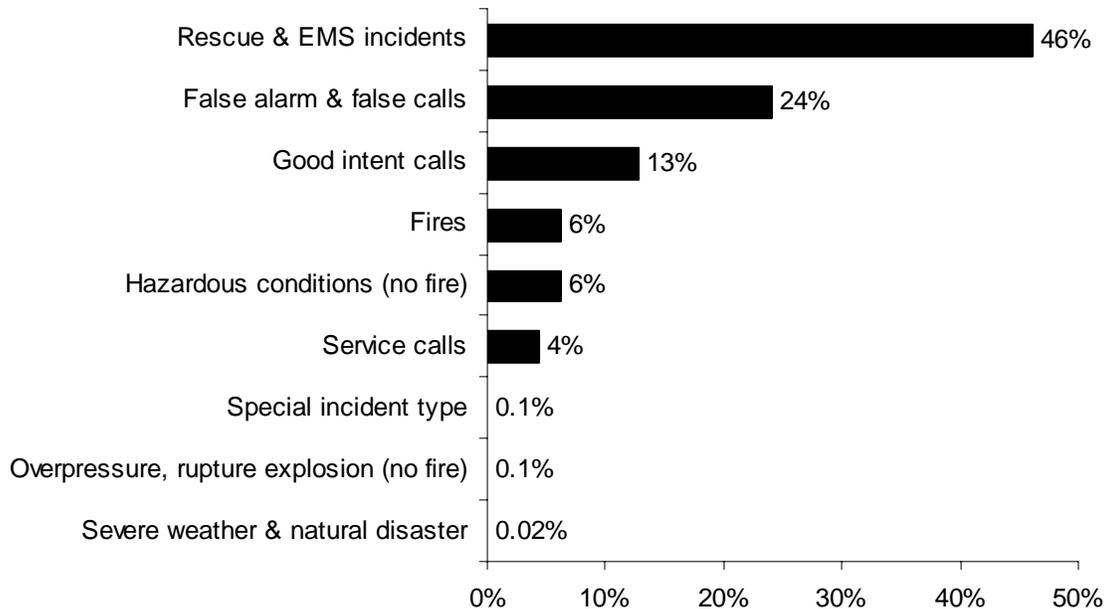

³ In version 4 a vacant building was defined by having a Fixed Property Use code in the subsection of construction, unoccupied properties, between 910 & 919. However in version 5, the Property Use is separate from the Building Status. In v5 a building is considered vacant if the Building Status is coded: 1- Under Construction; 3-Idle, not routinely used; 4-Under major renovation; 5-Vacant, secured; 6-Vacant, unsecured; & 7-Being demolished. The building use is coded separately in the Property Use field.

⁴ In MFIRS v5 a fire is considered an arson if the Cause of Ignition = 1 (Intentional) and the Age of Person (Fire Module) is greater than 17 or if the field is blank; or if the Wildland Module is used, the Wildland Fire Cause = 7 (Incendiary) and the Age of the Person (Wildland Module) is greater than 17 or if the field is left blank.

service assistance; 20, or 0.1%, were special incident type calls such as citizen complaints; 16, or 0.1%, were reported overpressure, rupture, explosion or overheat calls with no fire; and three, or 0.02%, were severe weather calls.

In 2008, Cambridge reported 861 fires⁵, accounting for 6% of all reported incidents.

2008 Incidents by Incident Type

Cambridge Gave Mutual Aid in 87 Reported Incidents

In 2008, Cambridge reported coming to the aid of other fire departments 87 times. Of these 87 incidents, 61, or 70%, were for cover assignments (service calls); 11, or 13%, were for good intent calls; eight, or 9%, were for hazardous conditions calls with no fire; six, or 7% were for rescue or EMS calls; and one, or 1%, was for a fire.

Cambridge Received Mutual Aid in 70 Incidents

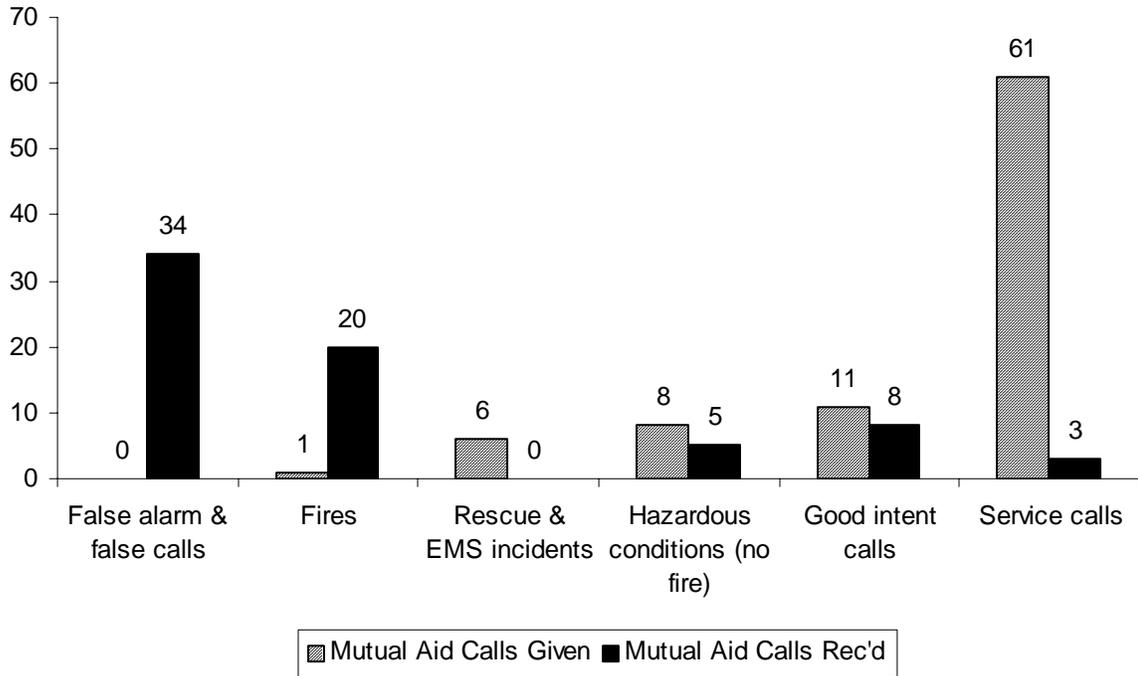

In 2008, surrounding fire departments gave aid to Cambridge in 70 incidents. Of these 70 incidents, 34, or 49%, were false alarms or false calls; 20, or 29%, were fires; eight, or 11%, were good intent calls; five, or 7%, were hazardous conditions calls with no fire; and three, or 4%, were service calls.

The following chart compares the number of calls that the Cambridge Fire Department gave mutual aid to a neighboring community compared to the number of calls that a neighboring community assisted Cambridge. In 2008 Cambridge was asked to send an

⁵ These fire calls include mutual aid call outside of Cambridge's jurisdiction.

apparatus outside of Cambridge 1.2 times more than they asked neighboring fire departments for help.

Framingham Fires in 2008

420 Total Fires — 305 Structures, 39 Vehicles & 76 Other Fires

The Framingham Fire Department reported 420 fires to the Massachusetts Fire Incident Reporting System (MFIRS) in 2008. The 305 structure fires, 39 motor vehicle fires, 49 brush fires, 20 outside rubbish fires, six special outside fires, and one cultivated vegetation or crop fire, caused five civilian injuries, 20 fire service injuries and an estimated dollar loss of \$5 million.

All Fires Down in 2008

Total fires decreased by 57 from the 477 incidents reported in 2007. Reported structure fires were down 14 from the 319 reported during the previous year. Motor vehicle fires increased by two from 37 the year before. Outside and other fires decreased by 45 from the 121 fires reported in the previous year.

FRAMINGHAM FIRES FROM 2004 TO 2008

	Total Fires	Structure Fires	Vehicle Fires	Other Fires	Total Arsons	Structure Arsons	Vehicle Arsons	Other Arsons
2004	462	332	43	87	8	3	1	4
2005	423	281	36	106	5	3	1	1
2006	402	282	22	98	8	4	0	4
2007	477	319	37	121	7	5	1	1
2008	420	305	39	76	8	3	2	3

BUILDING FIRES

There were 304 building fires of different types in Framingham in 2008. These 304 building fires accounted for all 99.7% of all structure fires in Framingham.

87% of Building Fires in Homes

The 304 building fires that occurred in Framingham in 2008 can be broken down by fixed property use as follows: 264, or 87% of all structure fires, were in residential properties; 18 fires took place in institutional properties; nine fires happened in mercantile or business properties; eight fires occurred in public assembly properties; four fires happened at educational facilities; one fire occurred at a laboratory.

RESIDENTIAL FIRES

Residential Building Fires

There were 264 reported residential building fires in Framingham in 2008. These 264 fires are a decrease of 15, or 5%, over the 279 residential building fires reported in 2007.

Apartments Accounted for 63 of Residential Building Fires

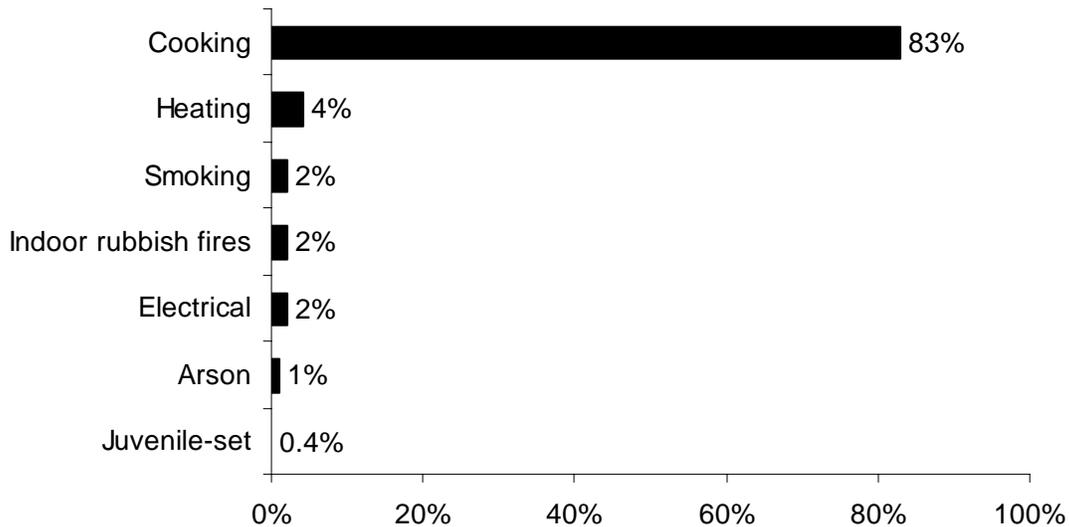

The peak fixed property uses for residential building fires were apartments, accounting for 63% of the residential building fires in Framingham; 22% occurred in 1- or 2-family

homes; 10% occurred in rooming houses; 4% occurred in residential board and care facilities; 1% occurred in dormitories or barracks; and 1% occurred in unclassified residential buildings.

Unattended Cooking Caused 83% of Residential Fires

The leading cause of residential building fires in Framingham was unattended cooking and other unsafe cooking practices, accounting for 83% of these fires. Heating equipment caused 4% of fires in people’s homes. Smoking, indoor rubbish fires, and electrical problems each caused 2% of residential fires. Arsons caused 1% of these fires. Juvenile-set fires were responsible for less than 1% of the reported residential building fires in Framingham in 2008.

2008 Leading Causes of Fires in Framingham Homes

86% of Residential Building Fires Confined to Non-Combustible Containers¹

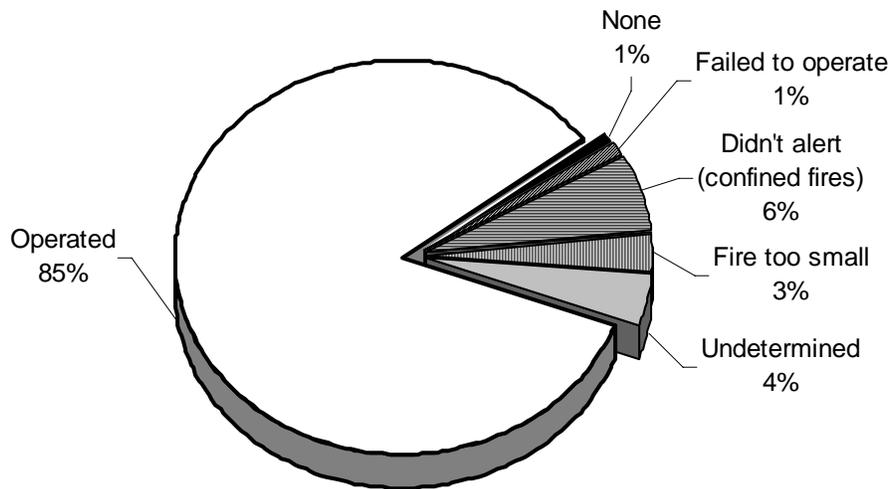

Two hundred and twenty-eight (228), or 86%, of all residential building fires were confined to non-combustible containers in 2008. Two hundred and twelve (212), or 80%, of all residential fires were cooking fires contained to a non-combustible container. Six (6) of the reported fires were confined to a chimney, accounting for 2% of the residential building fires. Five (5), or 2%, were fires confined to a fuel burner or boiler malfunction. Another five of these fires were rubbish fires contained to a non-combustible container accounting for 2% of the residential fires in Framingham in 2008.

¹ In MFIRS v5 a fire in a building contained to a non-combustible container (Incident Type = 113-118) does not have to have a Fire Module completed. Therefore the following data fields do not need to be completed: Area of Origin, Detector Status, Item First Ignited, Heat Source, Factors Contributing to Ignition, Cause of Ignition, and Equipment Involved In Ignition. These incidents are not included in the analysis of these fields.

Detectors Alerted Occupants in 85% of Fires

Smoke or heat detectors operated and alerted the occupants in 222, or 85%, of the residential building fires. In 6% of these fires², the detectors did not alert the occupants. Detectors were present but did not operate in 1% of these incidents. In 1% of these fires, no detectors were present at all. The fire was too small to trigger the detector in 3% of these fires. Smoke detector performance was undetermined in 11 incidents, or 4% of Framingham’s residential building fires.

Detector Status in Framingham's Residential Fires 2008

3 Detectors Failed

In two incidents, or 67% of the fires where the detector did not operate, the detector failed because the battery was missing. In one incident, or 33% of these fires, the smoke detector was present but failed to operate because the battery was dead.

VACANT BUILDING FIRES

2 Fires in a Vacant Building

Framingham reported two fires that occurred in a building that was vacant, under construction or demolition³. This represented 1% of the total 304 building fires reported to MFIRS in 2008. Both fires occurred in vacant single-family homes.

² These represent confined fires where it was reported that the detector did not alert the occupants.

³ In version 4 a vacant building was defined by having a Fixed Property Use code in the subsection of construction, unoccupied properties, between 910 & 919. However in version 5, the Property Use is separate from the Building Status. In v5 a building is considered vacant if the Building Status is coded: 1- Under Construction; 3-Idle, not routinely used; 4-Under major renovation; 5-Vacant, secured; 6-Vacant, unsecured; & 7-Being demolished. The building use is coded separately in the Property Use field.

JUVENILE-SET FIRES

1 Juvenile-set Fire

There was one juvenile-set fire in Quincy in 2008. The one structure fire caused \$100 in estimated damages.

ARSONS

8 Total Arsons⁴ — 3 Structures, 2 Motor Vehicles & 3 Other

Eight (8), or 2%, of Framingham's 420 fires were considered intentionally set, or, for purposes of this analysis, arson. The three structure arsons, two motor vehicle arsons and three outside and other arsons caused one fire service injury and an estimated dollar loss of \$292,001.

All Arsons Up Slightly

The total number of arsons increased by one from the seven reported in 2007. Reported structure arsons decreased by two from the five reported in 2007. Motor vehicle arsons increased by one from one reported in 2007. Outside and other arsons increased by one from the one reported outside and other arsons last year.

ALL INCIDENTS

Rescue & EMS Calls Are 61% of All Reported Incidents

In 2008, Framingham voluntarily reported 9,273 incidents to MFIRS. Of these 9,273 incidents, 8,852, or 95%, were non-fire incidents.

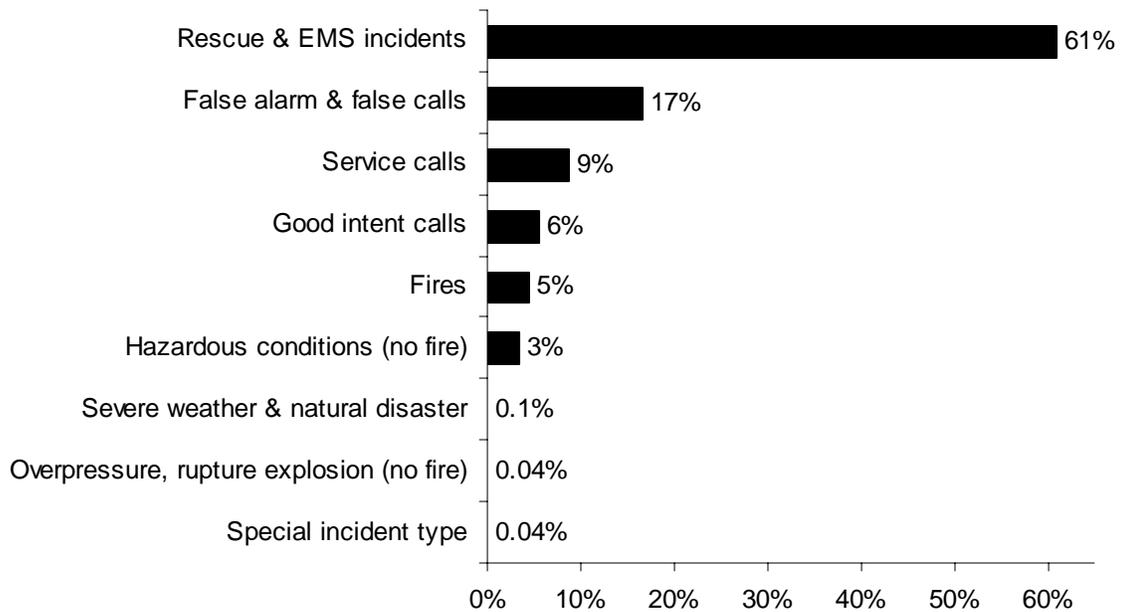

Of these 8,852 non-fire incidents 5,651, or 61% of all reported incidents in 2008, were reported rescue and emergency medical services (EMS) calls; 1,547, or 17%, were reported false alarm or false calls; 806, or 9%, were reported service calls such as lock-outs, water or smoke problem, unauthorized burning or public service assistance; 512, or 6%, were reported good intent calls; 321, or 3%, were reported hazardous condition calls with no fire; seven, or 0.1%, were severe weather calls; four, or 0.04%, were reported overpressure, rupture, explosion or overheat calls with no fire and another four, or 0.04% were special incident type calls.

In 2008, Framingham reported 421 fires⁵, accounting for 5% of all reported incidents.

⁴ In MFIRS v5 a fire is considered an arson if the Cause of Ignition = 1 (Intentional) and the Age of Person (Fire Module) is greater than 17 or if the field is blank; or if the Wildland Module is used, the Wildland Fire Cause = 7 (Incendiary) and the Age of the Person (Wildland Module) is greater than 17 or if the field is left blank.

⁵ This includes the fires that Framingham went to outside of their jurisdiction.

2008 Incidents by Incident Type

Framingham Gave Mutual Aid in 53 Reported Incidents

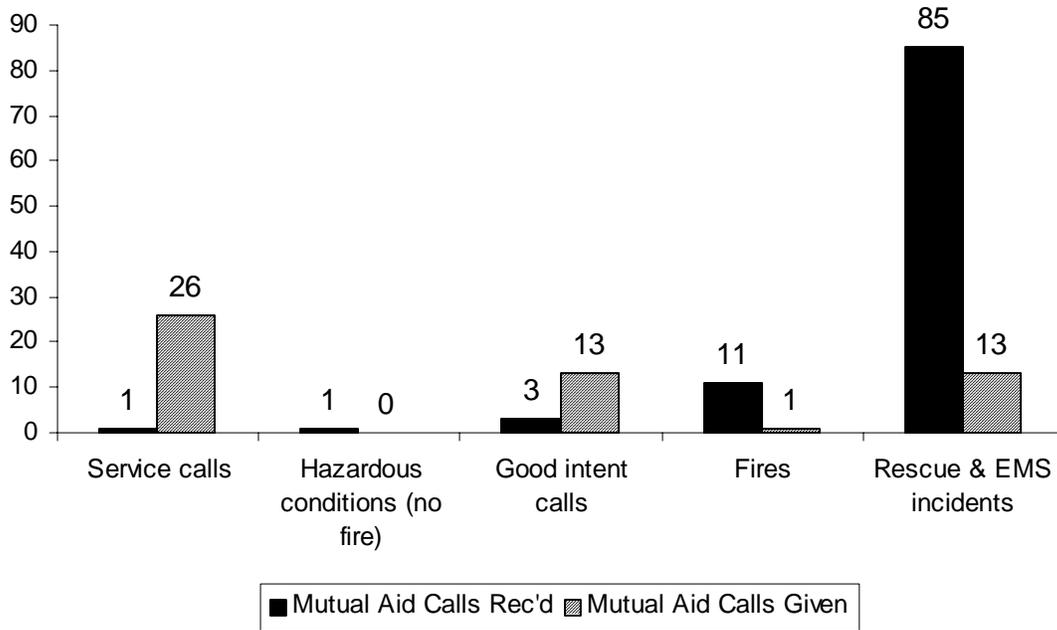

In 2008, Framingham reported coming to the aid of other fire departments 53 times. Of these 53 incidents, 26, or 49%, were for cover assignments (service calls); 13, or 25%, were for good intent calls; another 13, or 25%, were for rescue or EMS calls; three, or 13%, were for false alarms or false calls; and one, or 2%, was for a fire.

Framingham Received Mutual Aid in 101 Incidents

In 2008, surrounding fire departments gave aid to Framingham in 101 incidents. Of these 101 incidents, 85, or 84% were rescue and emergency medical services calls; 11, or 11% were for fires; three, or 3%, were good intent calls; one, or 1%, was a service call; and one, or 1% was for a hazardous condition call with no fire.

The following chart compares the number of calls that the Framingham Fire Department gave mutual aid to a neighboring community compared to the number of calls it received mutual aid. In 2008 Framingham received aid from other fire departments 1.9 times more than they gave it. The overwhelming majority of these calls were for EMS calls.

Lowell Fires in 2008

573 Total Fires — 403 Structures, 43 Vehicles & 127 Other Fires

The Lowell Fire Department reported 573 fires to the Massachusetts Fire Incident Reporting System (MFIRS) in 2008. The 403 structure fires, 43 motor vehicle fires, 77 outside rubbish fires, 37 brush fires, three special outside fires; and 10 unclassified fires caused one civilian death, two civilian injuries, one firefighter injury and an estimated dollar loss of \$17,600.

Woman Dies in Nursing Home Clothes Dryer Fire

- On February 21, 2008, at 12:33 a.m., the Lowell Fire Department was called to a fatal clothes dryer fire at a nursing home. The fire started in the laundry room and three sprinkler heads suppressed it. The 51-year old female victim was an employee. After she helped evacuate some of the nursing home's residents she collapsed. She was transported to a local hospital where she died from cardiac arrest. Detectors were present and alerted the occupants. No one else was injured in this fire, and damages were not estimated.

Structure Fires Up in 2008

Total fires decreased by 57 from the 688 incidents reported in 2007. Reported structure fires increased by 31 from the 372 reported during the previous year. Motor vehicle fires decreased by three from 46 the year before. Outside and other fires decreased by 85 from the 212 reported in 2007.

LOWELL FIRES FROM 2004 TO 2008

	Total Fires	Structure Fires	Vehicle Fires	Other Fires	Total Arsons	Structure Arsons	Vehicle Arsons	Other Arsons

2006 ¹	688	443	53	192	13	6	1	6
2007	630	372	46	212	12	6	2	4
2008	573	403	43	127	23	5	12	6

BUILDING FIRES

There were 400 building fires of different types in Lowell in 2008. These 400 building fires accounted for 99.3% of all structure fires in Lowell.

80% of Building Fires in Homes

The 400 building fires that occurred in Lowell in 2008 can be broken down by fixed property use as follows: 321, or 80% of all building fires, were in residential properties;

¹ The large increase in fires from 2005 to 2006 is because from Jan - May of 2005, Lowell only reported the mandated fires. In 2006 Lowell reported all of their fires for the entire year. Most of these fires fall into the confined fires category that Lowell may not have reported in the past.

24 fires occurred in public assembly properties; 22 fires occurred in special properties; 15 happened in mercantile or business properties; seven fires occurred in educational facilities; another seven fires occurred in institutional facilities; three fires occurred in manufacturing or processing facilities; and one fire happened in a storage facility.

RESIDENTIAL FIRES

Residential Building Fires Were Up

There were 321 reported residential building fires in Lowell in 2008. These 321 fires are an increase of 16 from the 305 reported residential building fires reported in 2007.

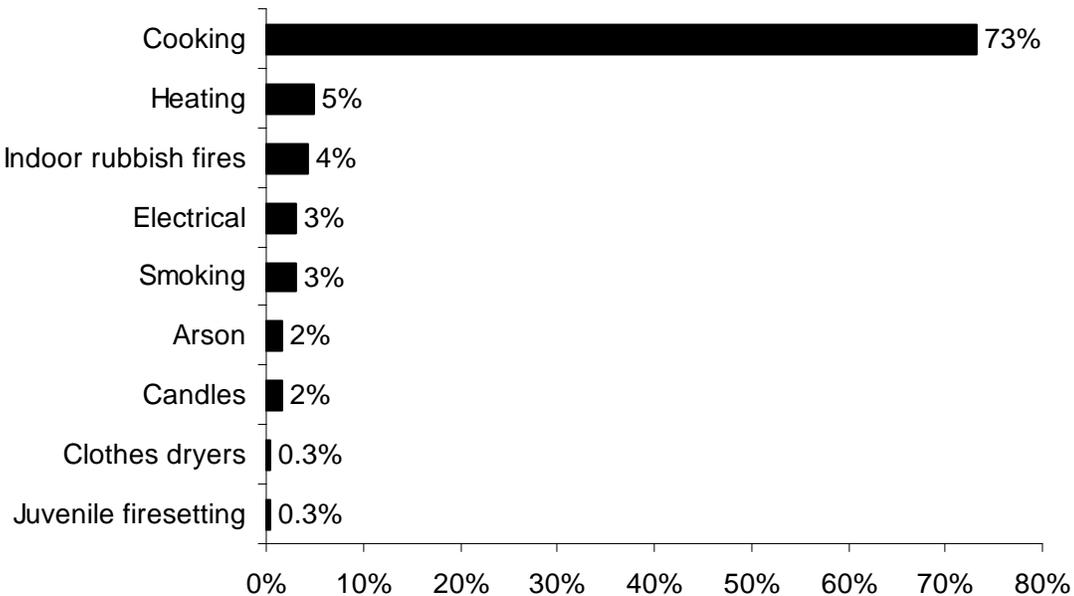

Apartments Accounted for Over 2/3 of Residential Building Fires

The peak fixed property uses for residential building fires were apartments, accounting for 69% of the building fires in Lowell; 23% occurred in 1- or 2-family homes; 3% happened in rooming houses; 2% happened in residential board and care facilities; another 2% occurred in dormitories; 1% occurred in hotels and motels; and less than 1% occurred in unclassified residences.

Unattended Cooking Leading Cause of Residential Fires

The leading cause of residential building fires in Lowell was unattended cooking and other unsafe cooking practices, accounting for two-thirds, or 73%, of these fires. Heating fires caused 5% of these fires. Indoor rubbish fires were the cause of 4% of Lowell’s residential fires. Electrical problems caused 3% of the fires. Smoking fires were also responsible for 3% of these fires. Arson and candles each caused 2% of these fires. Clothes dryers and juvenile-set fires were the cause of less than 1% of the fires in Lowell’s residential occupancies in 2008.

2008 Leading Causes of Fires in Lowell Homes

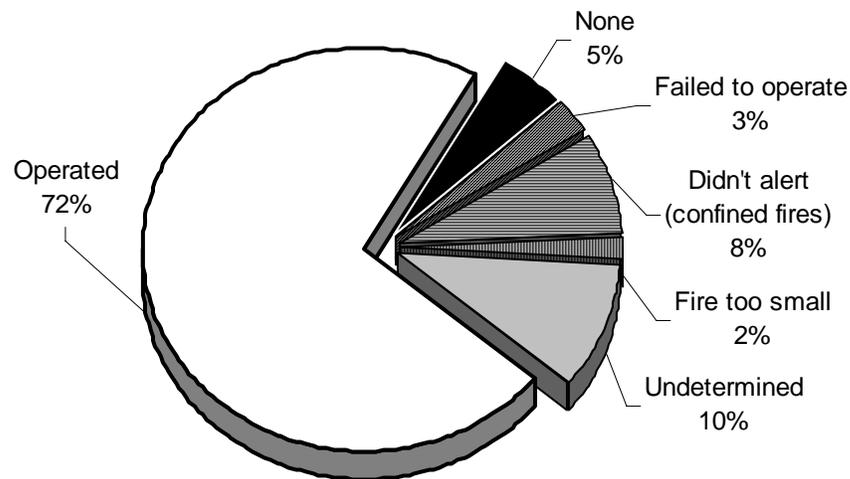

78% of Residential Building Fires Are Confined to Non-Combustible Containers²

Two hundred and fifty-one (251), or 78% of all residential building fires were confined to non-combustible containers in 2008. Two hundred and twenty-three (223), or 69%, of all residential building fires reported in 2008 were cooking fires contained to a non-combustible container. Fourteen (14), or 5%, of these fires were rubbish fires contained to a non-combustible container. Twelve (12), or 4%, were fires confined to a fuel burner or boiler malfunction. One fires, or less than 1%, was reported to have been contained to a chimney or flue. There was another fire (0.3%) reported to have been contained to a commercial compactor.

Detectors Worked in Almost 3/4 of Fires

Smoke or heat detectors operated and alerted the occupants in 232, or 72%, of the residential building fires. In 8% of these fires³, the detectors did not alert the occupants. Detectors were present but did not operate in 3% of these incidents. In 5% of these fires, no detectors were present at all. The fire was too small to trigger the detector in 2% of these fires. Smoke detector performance was undetermined in 33 incidents, or 10% of Lowell's residential building fires.

Detector Status in Lowell's Residential Fires 2008

² In MFIRS v5 a fire in a building contained to a non-combustible container (Incident Type = 113-118) does not have to have a Fire Module completed. Therefore the following data fields do not need to be completed: Area of Origin, Detector Status, Item First Ignited, Heat Source, Factors Contributing to Ignition, Cause of Ignition, and Equipment Involved In Ignition. These incidents are not included in the analysis of these fields.

³ These represent confined fires where it was reported that the detector did not alert the occupants.

22% of Detectors Failed Detectors From Missing Batteries

Of the nine fires where smoke detectors were present but failed to operate, two, or 22%, failed because they had a missing or disconnected batteries. Another two, or 22%, failed because of a power failure, shut-off or disconnect. It was undetermined in five cases, or 55%, why the detector failed to operate.

VACANT BUILDINGS**3 Building Fires in Vacant Buildings**

Lowell reported 3 fires that occurred in buildings that were vacant, under construction or demolition⁴. This represented 1% of the total 403 building fires reported to MFIRS in 2008. Two (2) one- or two-family homes, four apartment buildings, and one railroad yard facility were reported as vacant building fire incidents.

JUVENILE-SET FIRES**5 Juvenile-set Fires**

There were five juvenile-set fires in Lowell in 2008. There were three structure fires, one outside rubbish fire and one unclassified fire.

ARSONS**23 Arsons⁵ - 5 Structure, 12 Motor Vehicle and 6 Outside & Other**

Twenty-three (23), or 4%, of Lowell's 573 fires were considered intentionally set, or, for purposes of this analysis, arson. There were five structure arsons, 12 motor vehicle arsons and six outside and other arsons.

All Arsons Up in 2008

The total number of arsons increased by 11 from the 12 reported in 2007. Reported structure arsons dropped by one from the six reported in 2008. Motor vehicle arsons increased by 10 from the two reported in 2007. Outside and other arsons increased by two from four reported the year before.

26 Fires Reported as Undetermined

In 2008, Lowell reported 26 fires under investigation or cause undetermined after investigation. Eighteen (18), or 69%, of these 26 fires were structure fires. Three (3), or 12% were motor vehicle fires; and five, or 19%, were outside or other fires.

⁴ In version 4 a vacant building was defined by having a Fixed Property Use code in the subsection of construction, unoccupied properties, between 910 & 919. However in version 5, the Property Use is separate from the Building Status. In v5 a building is considered vacant if the Building Status is coded: 1- Under Construction; 3-Idle, not routinely used; 4-Under major renovation; 5-Vacant, secured; 6-Vacant, unsecured; & 7-Being demolished. The building use is coded separately in the Property Use field.

⁵ In MFIRS v5 a fire is considered an arson if the Cause of Ignition = 1 (Intentional) and the Age of Person (Fire Module) is greater than 17 or if the field is blank; or if the Wildland Module is used, the Wildland Fire Cause = 7 (Incendiary) and the Age of the Person (Wildland Module) is greater than 17 or if the field is left blank.

ALL INCIDENTS

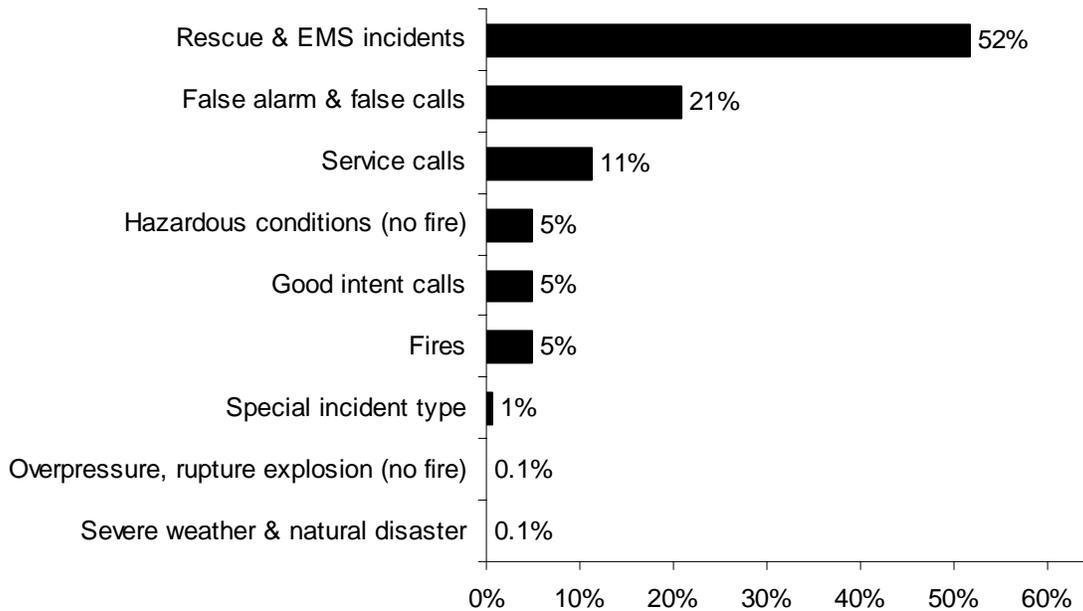

Rescue & EMS Calls Are Over 1/2 of All Reported Incidents

In 2008, Lowell voluntarily reported 12,616 incidents to MFIRS. Of these 12,616 incidents, 12,040, or 95% were non-fire incidents.

Of these 12,040 non-fire incidents 6,542, or 52% of all reported incidents in 2008, were reported rescue and emergency medical services (EMS) calls; 2,645, or 21%, were reported false alarm or false calls; 1,416, or 11%, were reported service calls such as lock-outs, water or smoke problem, unauthorized burning or public service assistance; 672, or 5%, were reported hazardous condition calls with no fire; 666, or 5%, were reported good intent calls; 73, or 1%, were special incident types; 16, or 0.1%, were reported overpressure, rupture, explosion or overheat calls with no fire; and 10, or 0.1%, was a severe weather calls.

In 2008, Lowell reported 576 fires⁶, accounting for 5% of all reported incidents.

2008 Incidents by Incident Type

Lowell Gave Mutual Aid in 19 Reported Incidents

In 2008, Lowell reported coming to the aid of other fire departments 19 times. Of these 19 incidents, 16, or 84%, were for cover assignments or other service calls, and three, or 16%, were for fires.

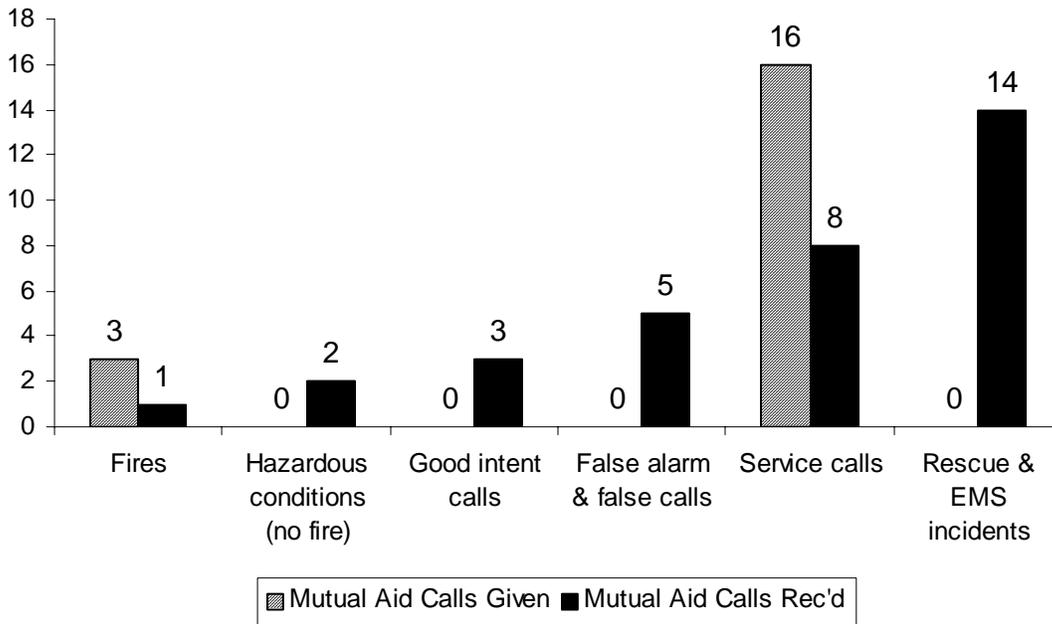

⁶ This includes the fires that Lowell responded to as mutual aid calls outside of their jurisdiction.

Lowell Received Mutual Aid in 33 Incidents

In 2008, surrounding fire departments gave aid to Lowell during 33 incidents. Of these 33 incidents, 14, or 42%, were rescue or EMS calls, eight, or 24%, were service calls; five, or 15%, were false alarms or false calls; three, or 9%, were for good intent calls; two, or 6% were hazardous condition calls with no fire; and one, or 3%, was a fire.

The following chart compares the number of calls that the Lowell Fire Department received mutual aid from a neighboring community compared to the number of calls that Lowell gave assistance to a neighboring community. In 2008 Lowell received aid 1.7 times more than they gave it.

Nantucket County Fires in 2008

24 Total Fires — 13 Structures, 3 Vehicles & 25 Outside and Other Fires

Nantucket County ranked thirteenth out of the fourteen Massachusetts counties in total reported fires. The Nantucket Fire Department reported 24 fires to the Massachusetts Fire Incident Reporting System (MFIRS) in 2008. The 13 structure fires, five motor vehicle fires, three brush fires, and three unclassified fires caused an estimated dollar loss of \$3,320. Nantucket County's fires accounted for 0.1% of the 30,136 Massachusetts fires reported in 2008.

All Fires Down

The total number of reported fire incidents decreased by 39 from the 63 fires reported in 2007. Structure fires decreased by 11 from the 24 reported in 2007. Motor vehicle fires increased by two from three the year before. Reported outside and other fires decreased by 30 from the 36 reported in 2007.

Nantucket is an island community with a small year round population. During the summer months, the population increases immensely. Consequently, two-thirds of Nantucket's fires occurred during the months May to September.

NANTUCKET FIRES FROM 2004 TO 2008

Year	Total Fires	Structure Fires	Vehicle Fires	Other Fires	Total Arsons	Structure Arsons	Vehicle Arsons	Other Arsons
2004 ¹	138	95	15	28	3	0	3	0
2005 ²	115	66	17	32	0	0	0	0
2006 ³	113	66	9	38	2	0	2	0
2007	63	24	3	36	0	0	0	0
2008	24	13	5	6	0	0	0	0

Fire and Fire Death Rates

Nantucket County had 2.5 fires per 1,000 population. That figure ranks Nantucket County thirteenth in the state and below the state rate of 4.8 fires per 1,000 population. Nantucket County also had 0 fire deaths per 10,000 population tying it ranked for twelfth among Massachusetts counties and below the state rate of 0.08 fire deaths per 10,000 population.

¹ The large increase in reported fires in 2004 is due to Nantucket's reporting of all of their incidents to MFIRS not just the mandated fires.

² In 2005, Nantucket had problems submitting their incidents for October – December. They were only able to submit fires, and only the very basic information for these incidents.

³ In 2006, Nantucket had problems submitting their non-fire incidents for January - June. They were only able to submit fires, and only the very basic information for these incidents.

Fireworks Caused Nantucket's Largest Loss Fire

- On July 30, 2008, at 6:02 p.m., the Nantucket Fire Department was called to a fireworks fire in a single-family home. The fireworks ignited the exterior wall and some light vegetation. No one was injured at this fire, and damages were estimated to be \$3,000. Smoke detectors were present but the fire was too small to activate them. The building was not sprinklered.

STRUCTURE FIRES**Reported Structure Fires Drop**

The 13 structure fires caused an estimated dollar loss of \$3,320. These incidents represented 54% of Nantucket County's reported fires in 2008. The average estimated dollar loss per structure fire was \$255. The total number of reported structure fires decreased by 11 from the 24 reported in 2007.

No Reported Structure Arsons

Nantucket County did not report any structure arsons in 2008. The last year that Nantucket reported a structure arson was in 2003.

BUILDING FIRES

There were 13 building fires of different types in Nantucket County in 2008. These 13 building fires accounted for all of the structure fires in Nantucket County.

85% of Nantucket Building Fires Occurred in People's Homes

Eleven (11), or 85%, of Nantucket County's 13 building fires occurred in residential occupancies. One (1) fire took place in a public assembly property. Another fire took place in a mercantile or business property.

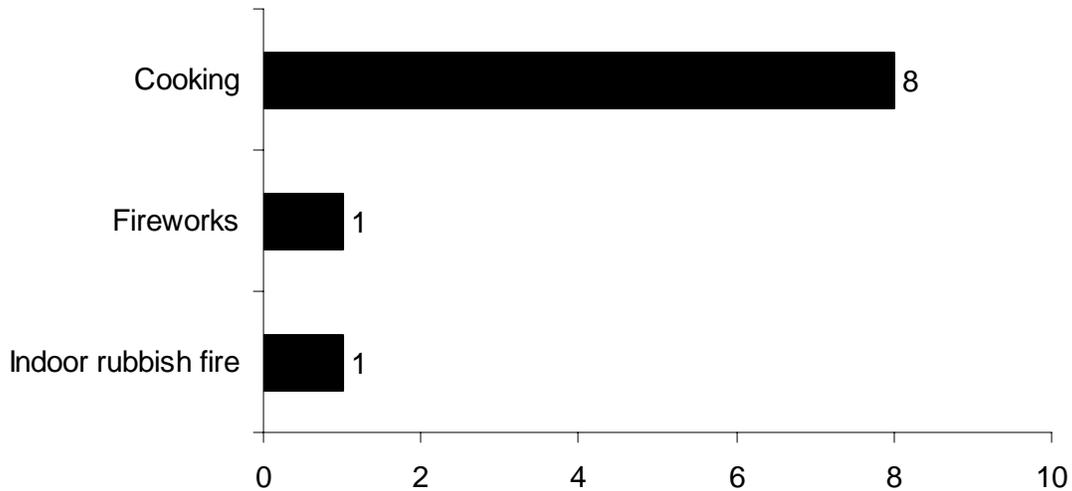

RESIDENTIAL FIRES**Residential Building Fires Down**

There were 11 reported residential building fires in Nantucket County in 2008. These 11 fires are a decrease of eight, or 42%, from the 19 residential building fires reported in 2007.

Cooking Fires Cause 8 of 11 Residential Fires

The leading cause of residential building fires in Nantucket County was unattended cooking and other unsafe cooking practices, accounting for eight, or 73% of these fires. Fireworks caused one, or 9%, of these fires. An indoor rubbish fire also caused 9% of Nantucket's 2008 residential fires.

2008 Leading Causes of Fires in Nantucket Homes

9 Residential Building Fires Are Confined to Non-Combustible Containers⁴

Nine (9), or 73% of all residential building fires, were reported as confined to non-combustible containers in 2008. Eight (8) of the reported fires were cooking fires contained to a non-combustible container accounting for 73% of the residential fires. An indoor rubbish fire accounted for one, or 9%, of Nantucket's residential fires.

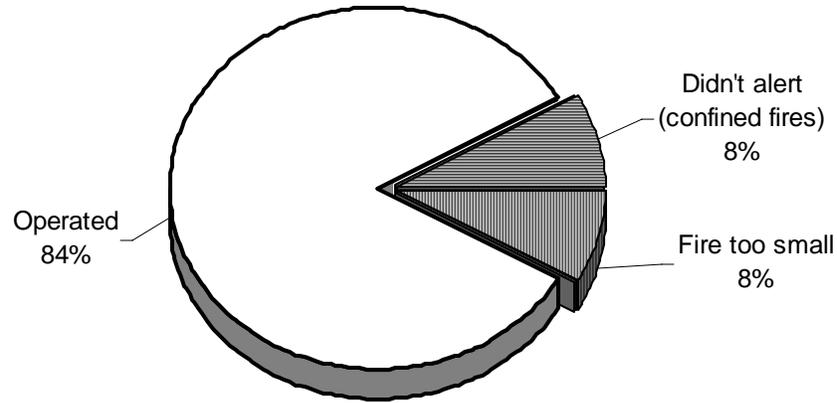

Detectors Alerted Occupants in 84% of Fires

Smoke or heat detectors operated and alerted the occupants in 10, or 84%, of the residential building fires. In one, or 8% of these fires⁵, the detectors did not alert the occupants. Detectors were present but the fire was too small to activate them in one, or 8%, of these incidents.

⁴ In MFIRS v5 a fire in a building contained to a non-combustible container (Incident Type = 113-118) does not have to have a Fire Module completed. Therefore the following data fields do not need to be completed: Area of Origin, Detector Status, Item First Ignited, Heat Source, Factors Contributing to Ignition, Cause of Ignition, and Equipment Involved In Ignition. These incidents are not included in the analysis of these fields.

⁵ These represent confined fires where it was reported that the detector did not alert the occupants.

Detector Status in Nantucket County's Residential Fires 2008

VACANT BUILDING FIRES

1 Vacant Building Fire

In 2008, there was one reported fire in a building that was vacant, under construction or demolition⁶. This fire occurred at a coffee shop.

JUVENILE-SET FIRES

No Juvenile-set Fires

There were no reported juvenile-set fires in Nantucket County in 2008.

ARSONS

No Arsons

For the second consecutive year there were no reportable arsons in Nantucket County.

⁶ In version 4 a vacant building was defined by having a Fixed Property Use code in the subsection of construction, unoccupied properties, between 910 & 919. However in version 5, the Property Use is separate from the Building Status. In v5 a building is considered vacant if the Building Status is coded: 1- Under Construction; 3-Idle, not routinely used; 4-Under major renovation; 5-Vacant, secured; 6-Vacant, unsecured; & 7-Being demolished. The building use is coded separately in the Property Use field.

ALL INCIDENTS

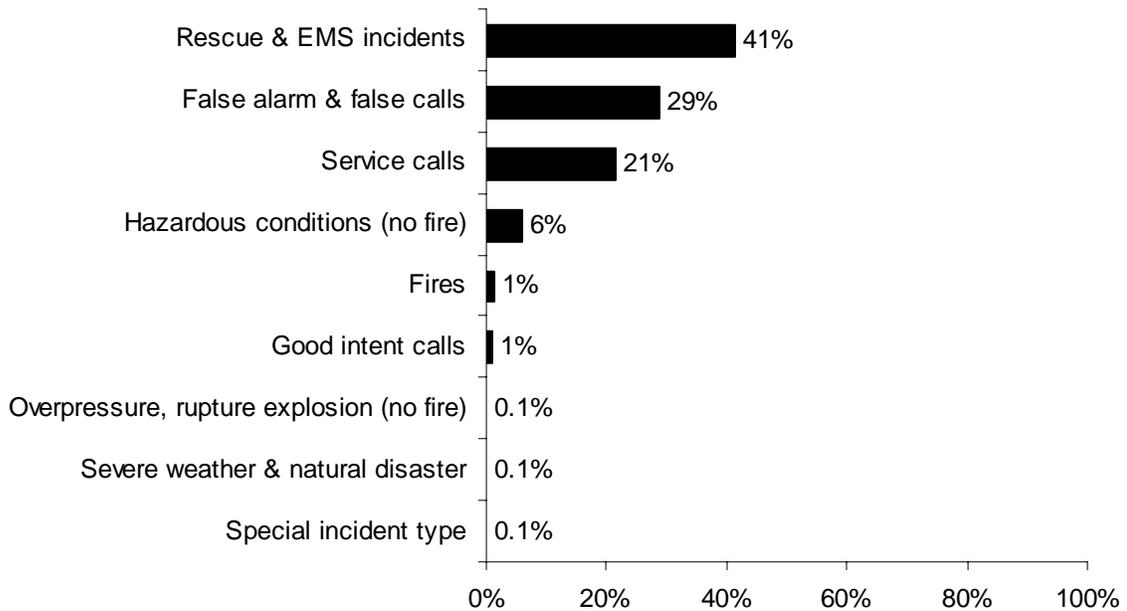

Rescue & EMS Calls Are 41% of All Reported Incidents

In 2008, Nantucket County reported 1,935 responses to MFIRS. Of these 1,935 incidents, 1,911 non-fire calls were voluntarily reported.

Of these 1,911 non-fire calls 798, or 41% of the total responses reported in 2008, were reported rescue and emergency medical services (EMS) calls; 560, or 29%, were reported false alarm or false calls; 414, or 21%, were reported service calls such as lock-outs, water or smoke problem, unauthorized burning or public service assistance; 115, or 6%, were reported hazardous condition calls with no fire; 21, or 1%, reported good intent calls; one, or 0.1%, was a reported overpressure, rupture, explosion or overheat call with no fire; another one, or 0.1%, was a severe weather call; and one, or 0.1%, was a special incident type call.

Twenty-four (24), or 1%, of the total responses submitted by the Nantucket Fire Department were fires.

Norfolk County Fires 2008

2008 Fires

Norfolk County Fires in 2008

3,067 Total Fires — 1,830 Structures, 290 Vehicles & 947 Other Fires

Norfolk County ranked fourth out of the fourteen Massachusetts counties in total reported fires. Norfolk County fire departments reported 3,067 fires to the Massachusetts Fire Incident Reporting System (MFIRS) in 2008. The 1,830 structure fires, 290 motor vehicle fires, 581 brush, tree or lawn fires, 213 outside rubbish fires, 62 special outside fires, nine cultivated vegetation or crop fires, and 82 other fires caused five civilian deaths, 26 civilian injuries, 99 fire service injuries and an estimated dollar loss of \$26.5 million. Norfolk County's fires accounted for 10% of the 30,136 Massachusetts fires reported in 2008.

All 28 of the fire departments in Norfolk County either reported incidents to the Massachusetts Fire Incident Reporting System (MFIRS) or certified that they had no reportable fires in 2008.

Structure Fires Up

The total number of reported fire incidents decreased by 683 from the 3,750 reported in 2007. Reported structure fires increased 144 from the 1,686 reported during the previous year. Motor vehicle fires decreased 18 from the 308 reported the year before. Reported outside and other fires decreased by 809 from the 1,756 reported a year earlier.

Brush Fires Down by 48%

Brush fires decreased by 531, or 48%, from the 1,112 reported in 2008. This is a major decrease and the main reason for the drop in all Norfolk County fires.

NORFOLK COUNTY FIRES FROM 2004 TO 2008

Year	Total Fires	Structure Fires	Vehicle Fires	Other Fires	Total Arsons	Structure Arsons	Vehicle Arsons	Other Arsons
2004	2,995	1,564	342	1,089	116	26	10	80
2005	2,998	1,562	345	1,091	100	20	17	63

2008	3,067	1,830	290	947	86	17	6	63

Fire and Fire Death Rates

Norfolk County had 4.7 fires per 1,000 population. That figure ranks Norfolk County sixth in the state and lower than the state rate of 4.8 fires per 1,000 population. Norfolk County also had 0.08 fire deaths per 10,000 populations ranking it sixth among Massachusetts counties and tied with the state rate of 0.08 fire deaths per 10,000 population.

5 Norfolk Fires Kill 5 Residents

- On January 25, 2008 at 7:41 p.m., the Wellesley Fire Department was called to a fatal electric space heater fire in a single-family home. The space heater was too close to some bedding in the living room, igniting it. The victim, a 55-year old physically disabled woman was unable to act. She was overcome by the heat and smoke. One other civilian and a firefighter were injured at this fire. Detectors were present but it was undetermined if they operated. Sprinklers were not present. Damages were estimated to be \$100,000.
- On February 3, 2008, at 7:37 p.m., the Milton Fire Department was called to a fatal electrical fire in a single-family home. A lamp was too close to an upholstered chair and the heat from the light bulb ignited the chair. The victim, a 59-year old man, was trapped on the second floor and overcome by the heat and smoke. Twelve (12) firefighters were injured at this fire. Smoke detectors and sprinklers were not present. No estimation of the damages was made for this fire.
- On April 14, 2008, at 12:03 p.m., the Milton Fire Department was called to a fatal clothes dryer fire in a two-family home. Heat from the clothes dryer ignited the lint that had accumulated in the long vent pipe. This in turn ignited a structural member in the wall. The victim, a 43-year old man, was asleep at the time of the fire and was overcome by the smoke. He was transported to a local hospital where he later died from smoke inhalation. It was undetermined if smoke detectors were present. There were no sprinklers. No estimation of the damages was made for this fire.
- On May 26, 2008 at 6:58 p.m. the Norwood Fire Department was called to a fatal fire in a single-family home of undetermined cause. The fire began in a first floor hallway. The victim, a 34-year old physically disabled woman, was in her bedroom and unable to act at the time of the fire and died from burns and smoke inhalation. No one else was injured at this fire. Detectors were present and operated. The building had no sprinklers. Damages from this fire were estimated to be \$430,000.
- On December 12, 2008 at 11:12 p.m., the Franklin Fire Department was called to a fatal heating fire in a single-family home. The fire began in the kitchen when a space heater was on and too close to combustibles. The 61-year old male victim was overcome by the heat and smoke. No one else was injured at this fire. It was undetermined if detectors were present, but sprinklers were not. Damages were estimated to be \$296,000.

Avon Has Norfolk County's Largest Loss Fire in 2008

- On October 13, 2008, at 4:07 p.m., the Avon Fire Department responded to a smoking fire at a refrigerated storage facility. There were no reported injuries at this fire. Smoke detectors were present and alerted the occupants. Sprinklers were present and operated but did not discharge enough water because the fire originated in an area not protected by the system. Damages from this fire were estimated to be \$7.25 million.

STRUCTURE FIRES

Reported Structure Fires Up

The 1,830 structure fires caused all five of Norfolk County's civilian deaths, 21 civilian injuries, 88 fire service injuries and an estimated dollar loss of \$25.6 million. These incidents represented 60% of Norfolk County's reported fires in 2008. The average estimated dollar loss per structure fire was \$14,006. The total number of reported structure fires increased by 144, or 9%, from the 1,686 reported in 2007.

Arson Caused of 1% of Structure Fires

The 17 structure arsons caused an estimated dollar loss of \$843,100. Arson was indicated as the cause of 1% of the structure fires and 3% of Norfolk County's structure fire dollar loss. The 17 structure arsons accounted for 20% of the Norfolk County arson fires reported in 2008. The total number of reported structure arsons decreased by four, or 19%, from 21 in 2007.

29% of Structure Arsons Occur in Residential Properties

Twenty-nine percent (29%) of Norfolk County's 17 structure arsons occurred in residential occupancies; 24% occurred in jails or prisons¹; 12% each happened in mercantile or business properties, and educational facilities; and 6% occurred each in manufacturing or processing facilities, storage facilities, and special properties.

BUILDING FIRES

There were 1,816 building fires of different types in Norfolk County in 2008. These 1,816 building fires accounted for 99.1% of all structure fires in Norfolk County.

84% of Norfolk Building Fires Occurred in People's Homes

One thousand five hundred and twenty (1,520), or 84%, of Norfolk County's 1,816 building fires occurred in residential occupancies. Mercantile and business properties had 79 fires. Sixty-five (65) fires took place in public assembly properties, including restaurants and churches. Hospitals, prisons, and other institutional buildings also experienced 65 fires. Thirty (30) building fires took place on educational properties. Twenty-two (22) building fires in Norfolk County occurred in special properties such as outbuildings, bus stop shelters and telephone booths. Nineteen (19) fires took place in storage properties. Eleven (11) fires took place in manufacturing and processing facilities, and two fires occurred in industrial facilities in Norfolk County in 2008.

RESIDENTIAL FIRES

Apartments Accounted for Almost 1/2 of Residential Building Fires

The peak fixed property uses for residential building fires were apartments accounting for 48% of the residential building fires in Norfolk County; 45% occurred in 1- or 2-family homes; 3% occurred in dormitories; 2% happened in rooming houses; 1% occurred in

¹ All 4 of these arsons happened at MCI-Cedar Junction in Walpole or MCI-Norfolk.

residential board and care facilities; and less than 1% happened in hotels or motels. Sixteen (16), or 1% of the residential building fires in Norfolk County occurred in unclassified residential buildings.

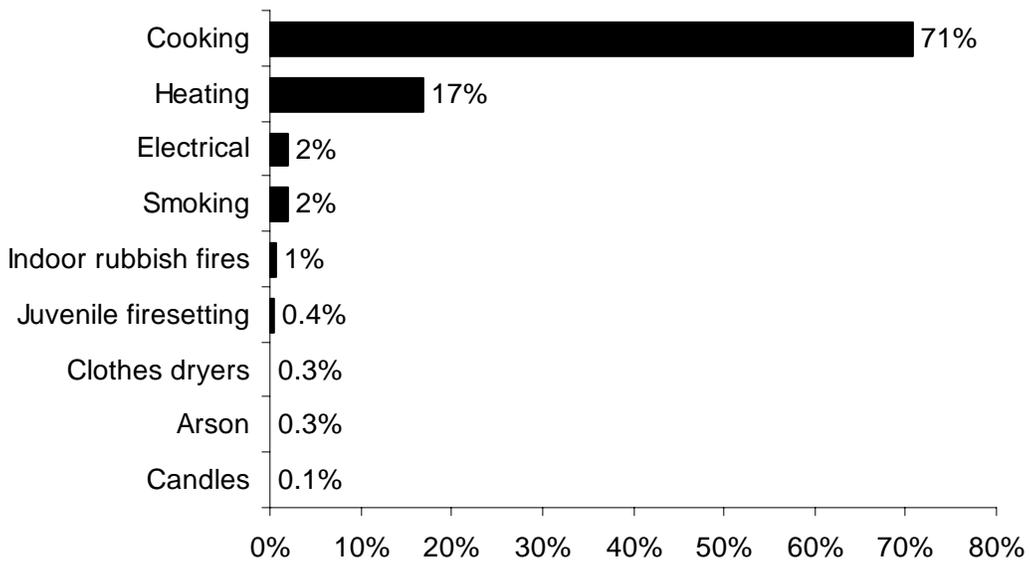

Residential Building Fires Are Up

There were 1,351 reported residential building fires in Norfolk County in 2008. These 1,351 fires are an increase of 170, or 13%, from the 1,181 residential building fires reported in 2007. This increase was due in large part to the 21% increase in fires in apartments between 2007 and 2008.

Cooking Causes Almost 71% of Residential Fires

The leading cause of residential building fires in Norfolk County was unattended cooking and other unsafe cooking practices, accounting for 71% of the fires. Heating caused 17% of fires in people’s homes. Electrical problems and smoking each caused 2% of these fires. Indoor rubbish fires caused 1% of these fires. Juvenile-set fires (0.4%), clothes dryers (0.3%), arson (0.3%), and candles (0.1%) each caused less than 1%, of the residential building fires in Norfolk County in 2008.

**2008 Leading Causes of Fires
in Norfolk County Homes**

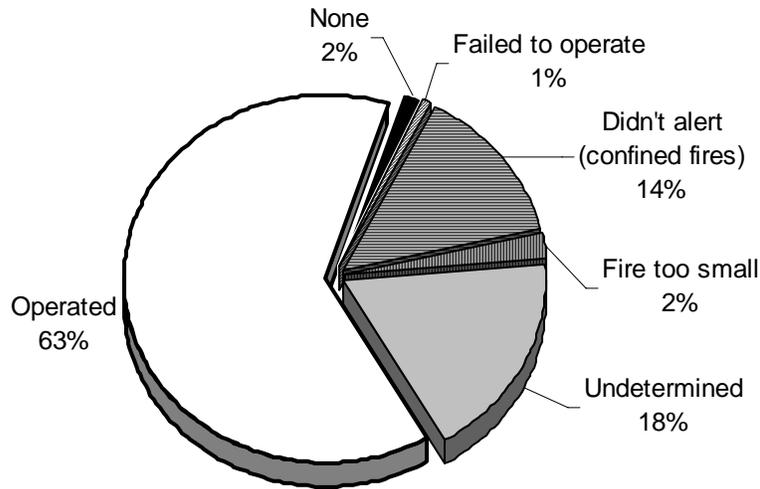

87% of Residential Building Fires Are Confined to Non-Combustible Containers²

One thousand and three hundred and sixteen (1,316), or 87% of all residential building fires, were reported as confined to non-combustible containers in 2008. One thousand and fifty-three (1,053) of the reported fires were cooking fires contained to a non-combustible container accounting for 69% of residential building fires. One hundred and seventy-one (171), or 13%, were fires confined to a fuel burner or boiler malfunction. Seventy-seven (77), or 6%, of all residential building fires reported in 2008 were fires confined to a chimney. Fifteen (15), or 1%, of Norfolk County’s residential fires were contained rubbish fires.

Detectors Alerted Occupants in Just Almost 2/3 of Fires

Smoke or heat detectors operated and alerted the occupants in 964, or 63%, of the residential building fires. In 14% of these fires³, the detectors did not alert the occupants. Detectors were present but did not operate in 1% of these incidents. In 2% of these fires, no detectors were present at all. The fire was too small to trigger the detector in 2% of the residential fires. Smoke detector performance was undetermined in 276 incidents, or 18% of Norfolk County’s residential building fires.

Detector Status in Norfolk County's Residential Structure Fires 2008

² In MFIRS v5 a fire in a building contained to a non-combustible container (Incident Type = 113-118) does not have to have a Fire Module completed. Therefore the following data fields do not need to be completed: Area of Origin, Detector Status, Item First Ignited, Heat Source, Factors Contributing to Ignition, Cause of Ignition, and Equipment Involved In Ignition. These incidents are not included in the analysis of these fields.

³ These represent confined fires where it was reported that the detector did not alert the occupants.

Almost 1/2 of Failed Detectors Had Missing or Disconnected Batteries

Of the 15 fires where smoke detectors were present but failed to operate, seven, or 47%, failed because the batteries were either missing or disconnected. Two detectors, or 13%, failed because the power was shut-off or disconnected. One (1), or 7%, did not operate because of dead batteries. It was undetermined or unclassified in five cases, or 33%, why the detectors failed to operate.

VACANT BUILDINGS**1% of Building Fires Occurred in Vacant Buildings**

Norfolk County reported 23 fires that occurred in buildings that were vacant, under construction or demolition⁴. This represented 1% of the total 1,816 building fires reported to MFIRS in 2008. Eleven (11) fires occurred in vacant residential properties. Three (3) fires each in public assembly properties and manufacturing or processing facilities were reported as vacant building fires. Two vacant building fires occurred in outbuildings or shelters. Storage facilities, institutional facilities, mercantile and business properties and educational facilities all reported one vacant building fire.

Seven (7), or 30%, of the vacant building fires in Norfolk County in 2008 were determined to be intentionally set. A vacant building arson occurred each at a swimming facility, a place of worship, a high school, or single-family home, a manufacturing facility, a shed and an outbuilding or shelter.

JUVENILE-SET FIRES**18 Juvenile-set Fires**

There were 18 reported juvenile-set fires in Norfolk County in 2008. The 10 structure fires, one motor vehicle fire, five brush fires, one outside rubbish fire, and one unclassified fire caused one fire service injury and \$144,300 in estimated damages.

ARSONS**86 Total Arsons — 17 Structures, 6 Vehicles & 63 Other Arsons**

Eighty-six (86), or 3% of Norfolk County's 3,067 fires were intentionally set, or, for purposes of this analysis, arson⁵. The 17 structure arsons, six motor vehicle arsons and 63 outside and other arsons caused an estimated loss of \$855,325.

⁴ In version 4 a vacant building was defined by having a Fixed Property Use code in the subsection of construction, unoccupied properties, between 910 & 919. However in version 5, the Property Use is separate from the Building Status. In v5 a building is considered vacant if the Building Status is coded: 1- Under Construction; 3-Idle, not routinely used; 4-Under major renovation; 5-Vacant, secured; 6-Vacant, unsecured; & 7-Being demolished. The building use is coded separately in the Property Use field.

⁵ In MFIRS v5 a fire is considered an arson if the Cause of Ignition = 1 (Intentional) and the Age of Person (Fire Module) is greater than 17 or if the field is blank; or if the Wildland Module is used, the Wildland Fire Cause = 7 (Incendiary) and the Age of the Person (Wildland Module) is greater than 17 or if the field is left blank.

Structure and Outside & Other Arsons Down

The total number of reported arson fires decreased by eight from the 94 reported in 2007. Reported structure arsons decreased by four from the 21 reported the previous year. Motor vehicle arsons increased by two from the four reported in 2007. Reported outside and other arsons decreased by six from 69 the year before.

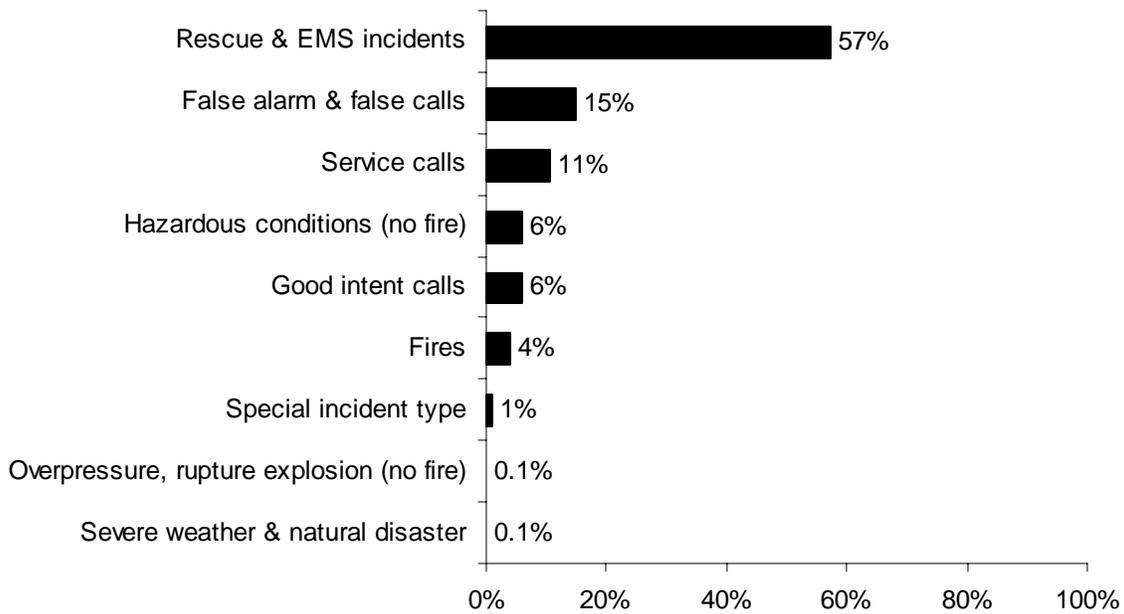

ALL INCIDENTS

Rescue & EMS Calls Are 57% of All Reported Incidents

In 2008, fire departments in Norfolk County reported 80,716 responses⁶ to MFIRS. Of these 80,716 incidents, 77,473 non-fire calls were voluntarily reported.

Of these 77,473 non-fire incidents, 46,214, or 57% of all the incidents reported in 2008, were reported rescue and emergency medical services (EMS) calls; 11,928, or 15%, were reported false alarm or false calls; 8,671, or 11%, were reported service calls such as lock-outs, water or smoke problems, unauthorized burning or public service assistance; 5,189, or 6%, reported hazardous condition calls with no fire; 4,542, or 6%, were reported good intent calls; 779, 1%, were special incident type calls such as citizen complaints; 93, or 0.1%, were reported overpressure, rupture, explosion or overheat calls with no fire; and 57, or 0.1%, were severe weather responses.

2008 Responses by Incident Type

⁶ These figures include responses in which Norfolk County fire departments gave mutual aid to other fire departments.

Three thousand two hundred and forty-three (3,243), or 4%, of the total responses submitted by Norfolk County fire departments were fires.

Norfolk County Fire Departments Gave Mutual Aid 3,216 Times

In 2008, Norfolk County fire departments reported coming to the aid of other fire departments 3,216 times. Of these 3,216 responses, 1,836, or 57%, were for rescue or EMS calls; 642, or 20%, were for service calls such as cover assignments; 313, or 10%, were for good intent calls; 183, or 6%, were for false alarms or false calls; 175, or 65%, were for fires; 58, or 2%, were for hazardous conditions calls with no fire; five, or 02%, were special incident types; three, or 0.1%, were reported overpressure, rupture, explosion or overheat calls with no fire; and one, or 0.03%, was a severe weather call.

Norfolk County Received Mutual Aid in 1,965 Incidents

In 2008, Norfolk County fire departments reported receiving aid from surrounding departments in 1,965 incidents. Of these 1,965 incidents, 1,413, or 72%, were rescue and emergency medical services calls; 205, or 10%, were for fires; 199, or 10%, were false alarms or false calls; 58, or 3% were good intent calls; 48, or 2% were service calls; 40, or 2% were hazardous conditions calls with no fire; and two, or 0.1%, were reported overpressure, rupture, explosion or overheat calls with no fire.

Alerted occupants	67%
Didn't alert occupants	16%
Undetermined	17%

⁹ This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

¹⁰ Some fields in version 5 allow for multiple entries. Therefore the number of entries may be greater than the actual number of incidents being analyzed. These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Factors Contributing to Ignition from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires.

¹¹ This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

¹² These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Cause of Ignition from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires.

Quincy Fires in 2008

532 Total Fires — 282 Structures, 45 Vehicles & 205 Other Fires

The Quincy Fire Department reported 532 fires to the Massachusetts Fire Incident Reporting System (MFIRS) in 2008. The 282 structure fires, 45 motor vehicle fires, 128 brush fires, 60 outside rubbish fires, 13 special outside fires, two cultivated crop or vegetation fires and four unclassified fires caused three civilian injuries, 22 fire service injuries and an estimated dollar loss of \$525,000.

All Fires Down

Total fires decreased by 329 from the 861 incidents reported in 2007. Reported structure fires decreased by 11 from the 293 reported during the previous year. Motor vehicle fires decreased by six from 51 the year before. Outside and other fires decreased by 312 from the 517 fires reported in 2007.

QUINCY FIRES FROM 2004 TO 2008

	Total Fires	Structure Fires	Vehicle Fires	Other Fires	Total Arsons	Structure Arsons	Vehicle Arsons	Other Arsons
2004	669	387	56	226	26	5	2	19
2005	662	354	59	249	17	2	1	14
2006	670	367	54	249	1	0	0	1
2007	861	293	51	517	15	1	0	14
2008	532	282	45	205	15	2	0	13

Brush Fires Fall Dramatically

Quincy had a large decrease in brush fires in 2008. Brush fires decreased by 252, or 66%, from the 380 reported in 2007. This was a return towards the average amount of brush fires that Quincy has reported over the past 10 years, 171 brush fires. 2007 was an unusually bad year for brush fires in Quincy. It was the third highest number of brush fires in the last 20 years only being eclipsed in 1990 with 409 and 381 in 1991.

BUILDING FIRES

There were 279 building fires of different types in Quincy in 2008. These 279 building fires accounted for 98.9% of all structure fires in Quincy.

87% of Building Fires in Homes

The 279 building fires that occurred in Quincy in 2008 can be broken down by fixed property use as follows: 242, or 87% of all structure fires, were in residential properties; 12 fires took place in mercantile or business properties; seven fires occurred in institutional properties; six fires occurred in public assembly properties; another six fires happened in educational facilities; two fires happened in storage facilities; two fires occurred in manufacturing or processing facilities; and two fires occurred in special properties.

RESIDENTIAL FIRES

Residential Building Fires Down

There were 242 reported residential building fires in Quincy in 2008. These 242 fires are a decrease of 10, or 4%, from the 252 residential building fires reported in 2007.

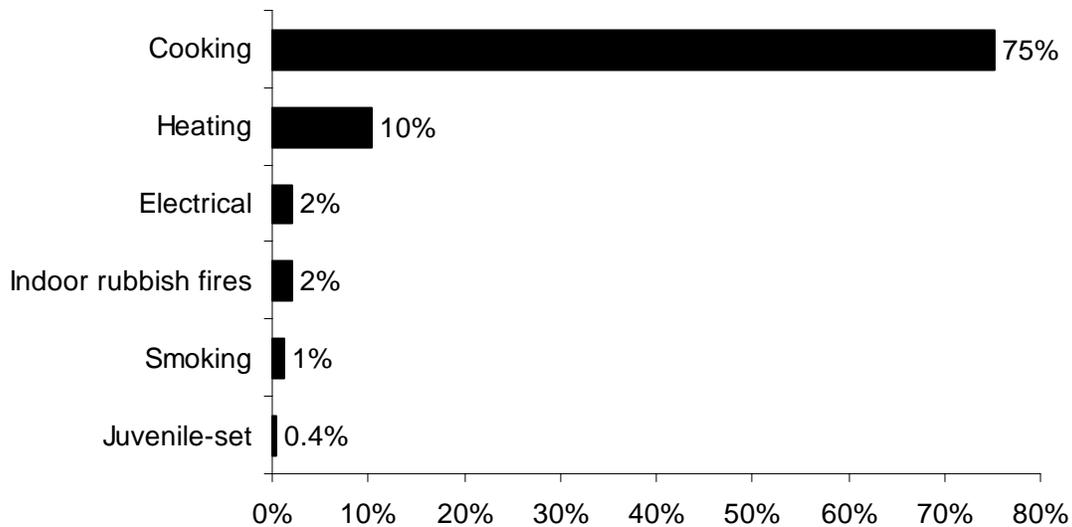

Apartments Accounted for 65% of Residential building Fires

The peak fixed property uses for residential building fires were apartments, accounting for 65% of the building fires in Quincy; 28% occurred in 1- or 2-family homes; 5% occurred in rooming houses; 1% occurred in residential board and care facilities; 1% occurred in dormitories; and 1% also occurred in hotels or motels.

Unattended Cooking Leading Caused 3/4 Residential Fires

The leading cause of residential building fires in Quincy was unattended cooking and other unsafe cooking practices, accounting for 75% of these fires. Heating caused 10% of fires in people’s homes. Electrical problems and indoor rubbish fires each caused 2% of these fires. Smoking started 1% and juvenile-set fires were responsible for less than 1% of Quincy’s residential building fires in 2008.

2008 Leading Causes of Fires in Quincy Homes

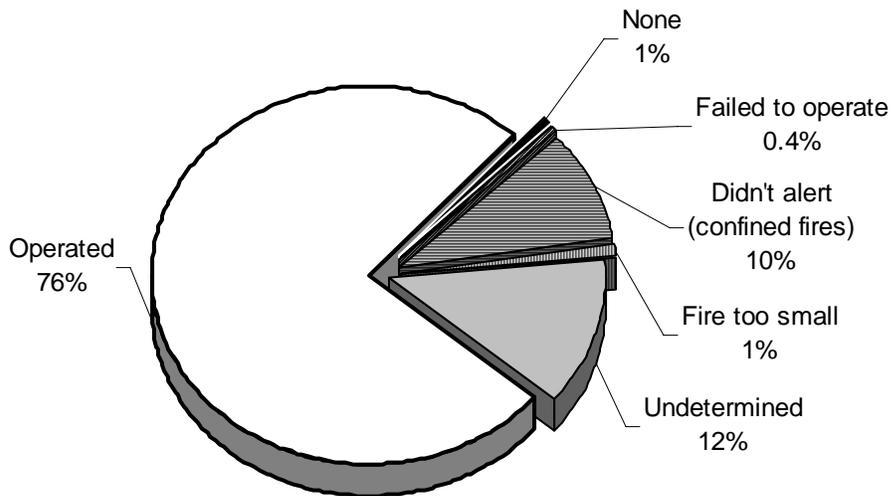

86% of Residential Building Fires Confined to Non-Combustible Containers¹

Two hundred and eight (208), or 86% of all residential building fires were confined to non-combustible containers in 2008. One hundred and seventy-nine (179), or 74%, of all residential building fires reported in 2008 were cooking fires contained to a non-combustible container. Nineteen (19), or 8%, were fires confined to a fuel burner or boiler malfunction. Six (6) of the reported fires were confined to a chimney accounting for 2% of these fires. Four (4), or 2%, of these fires were rubbish fires contained to a non-combustible container in Quincy in 2008.

Detectors Alerted Occupants in Over 3/4 of Fires

Smoke or heat detectors operated and alerted the occupants in 183, or 76%, of the residential building fires. In 10% of these fires², the detectors did not alert the occupants. Detectors were present but did not operate in less than 1% of these incidents. In 1% of these fires, no detectors were present at all. The fire was too small to trigger the detector in 1% of the residential fires. Smoke detector performance was undetermined in 30 incidents, or 12% of Quincy’s residential building fires.

Detector Status in Quincy's Residential Fires 2008

1 Detector Failed

There was one incident where the detectors were reported to have failed to operate. It was undetermined why it failed.

¹ In MFIRS v5 a fire in a building contained to a non-combustible container (Incident Type = 113-118) does not have to have a Fire Module completed. Therefore the following data fields do not need to be completed: Area of Origin, Detector Status, Item First Ignited, Heat Source, Factors Contributing to Ignition, Cause of Ignition, and Equipment Involved In Ignition. These incidents are not included in the analysis of these fields.

² These represent confined fires where it was reported that the detector did not alert the occupants.

VACANT BUILDINGS

4 Building Fires Occurred in Vacant Buildings

Quincy reported four fires that occurred in buildings that were vacant, under construction or demolition³. This represented 1% of the total 279 building fires reported to MFIRS in 2008. Two (2) one- or two-family homes, a nursing home, a high, junior high or middle school, and a shed were reported as vacant building fire incidents.

JUVENILE-SET FIRES

4 Juvenile-set Fires

There were four juvenile-set fires in Quincy in 2008. The two structure fires, one brush fire and one unclassified fire caused one fire service injury.

ARSONS

15 Total Arson⁴ — 2 Structure Arsons & 13 Special Outside Arsons

Fifteen (15), or 3%, of Quincy's 532 fires were considered intentionally set, or, for purposes of this analysis, arson. There were two structure arsons and 13 outside and other intentionally set fires.

All Arsons Remains the Same

The total number of arsons remained the same with 15 incidents reported in both 2007 and 2008. Reported structure arsons increased by one from one reported the year before. For the third year in a row, there were no reported motor vehicle arsons. Outside and other arsons decreased by one from the 13 reported outside and other arsons last year.

ALL INCIDENTS

Rescue & EMS Calls Are Over 1/2 of All Reported Incidents

In 2008, Quincy voluntarily reported 8,819 incidents to MFIRS. Of these 8,819 incidents, 8,286, or 94%, were non-fire incidents.

Of these 8,286 non-fire incidents 4,814, or 55% of all reported incidents in 2008, were reported rescue and emergency medical services (EMS) calls; 1,794, or 20%, were reported false alarm or false calls; 665, or 6%, were reported service calls such as lock-outs, water or smoke problem, unauthorized burning or public service assistance; 538, or

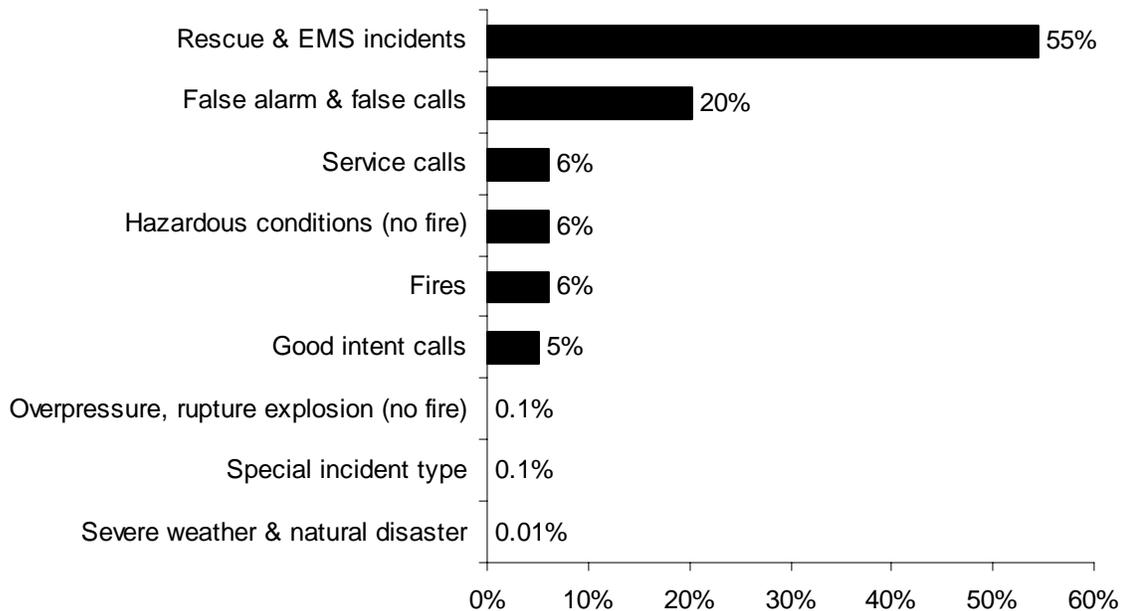

³ In version 4 a vacant building was defined by having a Fixed Property Use code in the subsection of construction, unoccupied properties, between 910 & 919. However in version 5, the Property Use is separate from the Building Status. In v5 a building is considered vacant if the Building Status is coded: 1- Under Construction; 3-Idle, not routinely used; 4-Under major renovation; 5-Vacant, secured; 6-Vacant, unsecured; & 7-Being demolished. The building use is coded separately in the Property Use field.

⁴ In MFIRS v5 a fire is considered an arson if the Cause of Ignition = 1 (Intentional) and the Age of Person (Fire Module) is greater than 17 or if the field is blank; or if the Wildland Module is used, the Wildland Fire Cause = 7 (Incendiary) and the Age of the Person (Wildland Module) is greater than 17 or if the field is left blank.

6%, were reported hazardous condition calls with no fire; 456, or 5%, were reported good intent calls; 10, or 0.1%, were reported overpressure, rupture, explosion or overheat calls with no fire; eight, or 0.1%, were special incident type calls such as citizen complaints; and one, or 0.01%, was a severe weather or natural disaster call.

In 2008, Quincy reported 533 fires⁵, accounting for 6% of all reported incidents.

2008 Incidents by Incident Type

Quincy Gave Mutual Aid in 11 Reported Incidents

In 2008, Quincy reported coming to the aid of other fire departments 11 times. Of these 11 incidents, eight, or 73%, were for cover assignments (service calls); one, or 9% was for a fire; one, or 9%, was a rescue or EMS call; and one, or 9% was for a special incident type.

Quincy Received Mutual Aid in 3 Incidents

In 2008, surrounding fire departments gave aid to Quincy in three incidents. Two (2), or 67%, were rescue or EMS calls; and one, or 33%, was a fire.

⁵ This figure includes the fires that Quincy gave mutual aid to other towns outside their jurisdiction.

⁸ This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

⁹ Some fields in version 5 allow for multiple entries. Therefore the number of entries may be greater than the actual number of incidents being analyzed. These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Factors Contributing to Ignition from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires.

¹⁰ This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

¹¹ These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Cause of Ignition from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires.

¹² All of the equipment involved is derived from the confined fires. Quincy did not report any equipment involved in ignition in any of its non-confined fires.

¹³ This was a 9-year old child playing with a lighter, i.e. a juvenile-set fire, not an arson.

¹⁴ This figure includes the mutual aid fires that Quincy went out of their jurisdiction.

Plymouth County Fires 2008

2008 Fires

Plymouth County Fires in 2008

1,773 Total Fires — 774 Structures, 232 Vehicles & 767 Other Fires

Plymouth County ranked eighth out of the fourteen Massachusetts counties in total reported fires. Plymouth County fire departments reported 1,773 fires to the Massachusetts Fire Incident Reporting System (MFIRS) in 2008. The 774 structure fires, 232 motor vehicle fires, 467 brush, tree or lawn fires, 142 outside rubbish fires, 88 special outside fires, four cultivated vegetation or crop fire and 66 other fires caused five civilian deaths, 28 civilian injuries, 48 fire service injuries and an estimated dollar loss of \$17.4 million. Plymouth County's fires accounted for 6% of the 30,136 Massachusetts fires reported in 2008.

All 28 fire departments in Plymouth County either reported incidents to the Massachusetts Fire Incident Reporting System (MFIRS) or certified that they had no reportable fires in 2008.

All Fires Down

The total number of reported fire incidents decreased by 237, from the 2,010 reported in 2007. Reported structure fires decreased by 110, from 884 the year before. Motor vehicle fires decreased by 36 from 268 the previous year. Reported outside and other fires decreased by 91 from 858 in 2007.

PLYMOUTH COUNTY FIRES FROM 2004 TO 2008

Year	Total Fires	Structure Fires	Vehicle Fires	Other Fires	Total Arsons	Structure Arsons	Vehicle Arsons	Other Arsons
2004	1,676	723	290	663	107	27	8	72
2005	1,682	694	285	703	103	17	17	69
2006	1,929	733	238	958	114	22	5	87
2007	2,010	884	268	858	91	28	12	51
2008	1,773	774	232	767	99	34	9	56

Fire and Fire Death Rates

Plymouth County had 3.7 fires per 1,000 population. That figure ranks Plymouth County tenth in the state and below the state rate of 4.8 fires per 1,000 population. Plymouth County also had 0.11 fire deaths per 10,000 populations ranking it fourth among Massachusetts counties and above the state rate of 0.08 fire deaths per 10,000 population.

5 Plymouth County Fatal Fires Killed 5 Residents in 2008

- On January 23, 2008, at 4:22 p.m. the Rockland Fire Department was called to a fatal arson fire in a single-family home. The 42-year old woman successfully committed self-immolation. The victim placed a 20 pound LP-gas tank in the kitchen and started the fire. She then went upstairs to her bedroom. Three firefighters were injured at this fire. Smoke detectors were present and operated. Sprinklers were not present. Damages from this fire were estimated to be \$50,000.

- On February 3, 2008 at 12:47 p.m., the Mattapoisett Fire Department was called to a fatal electrical fire in a single-family home. The fire was caused by an electrical failure in the wiring. The victim, a 71-year old man, was trapped by the fire. One firefighter was injured at this fire. It was undetermined if smoke detectors were present. Sprinklers were not present. Damages from this fire were estimated to be \$500,000.
- On March 15, 2008, at 3:34 a.m., the Hanover Fire Department was called to a fatal car fire. The vehicle was first involved in a single car motor vehicle accident with the collision starting the fire. The 24-year old male driver was trapped in the vehicle and died from smoke inhalation and burns. No one else was injured in this fire.
- On November 18, 2008, at 1:47 a.m., the Plymouth Fire Department was called to a fatal single-car accident and ensuing fire. The 49-year old female driver was trapped in her car after the accident on Route 3. Her body was not found until the fire was out and firefighters were performing overhaul of the vehicle. She died from burns and smoke inhalation. No one else was injured in this fire.
- On December 17, 2008 at 2:26 p.m., the Scituate Fire Department was called to a successful attempt at self-immolation in a single-family home. The victim, a 45-year old man, removed the ‘drip cap’ on the natural gas line, and poured gasoline throughout the basement of his girlfriend’s house and ignited it. He died in the resulting explosion that leveled the house and damaged seven neighboring homes. It was undetermined if detectors were present. One firefighter was injured at this fire. Damages from this fire were estimated to be \$450,000.

Brockton Has Plymouth County’s Largest Loss Fires in 2008

- On April 8, 2008, at 6:27 a.m., the Brockton Fire Department responded to an electrical fire in a business office. The fire was started by the malfunction of an old electrical meter. Seven firefighters were injured battling this fire. Detectors were not present; and the building was not sprinklered. Damages from this fire were estimated to be \$1.8 million.

STRUCTURE FIRES

Reported Structure Fires Down

The 774 structure fires caused three civilian deaths, 16 civilian injuries, 44 fire service injuries and an estimated dollar loss of \$16.3 million. These incidents represented 44% of Plymouth County’s reported fires in 2008. The average estimated dollar loss per structure fire was \$21,087. The total number of reported structure fires decreased by 110, or 12%, from the 884 reported in 2007.

Arson Caused of 4% of Structure Fires

The 34 structure arsons caused two civilian deaths, five fire service injuries and an estimated dollar loss of \$1.2 million. Arson was indicated as the cause of 4% of the structure fires and 7% of Plymouth County’s structure fire dollar loss. The 34 structure

arsons accounted for 34% of the Plymouth County arson fires reported in 2008. The total number of reported structure arsons increased by six, or 21%, from 28 in 2007.

Over 2/3 of Structure Arsons Occurred in Residences

Sixty-eight percent (68%) of Plymouth County's 34 structure arsons occurred in residential occupancies; 12% occurred each in storage facilities and special properties; and 3% each occurred in public assembly properties, educational facilities and institutional facilities.

BUILDING FIRES

There were 753 building fires of different types in Plymouth County in 2008. These 753 building fires accounted for 97.3% of all building fires in Plymouth County.

78% of Plymouth Building Fires Occurred in People's Homes

Five hundred and eighty-nine (589), or 78%, of Plymouth County's 589 building fires occurred in residential occupancies. Forty-one (41) building fires in Plymouth County occurred in special properties such as outbuildings, bus stop shelters and telephone booths. Mercantile and business properties had 38 fires. Twenty-seven (27) fires took place in public assembly properties, including restaurants and churches. Twenty (20) fires took place in storage facilities. Thirteen (13) building fires took place in educational facilities. Hospitals, prisons, and other institutional buildings experienced 12 fires. Nine (9) fires took place in manufacturing and processing facilities. Four (4) fires occurred in industrial, utility, defense, agricultural or mining facilities in Plymouth County in 2008.

RESIDENTIAL FIRES

Residential Building Fires Up 26%

There were 589 reported residential building fires in Plymouth County in 2008. These 589 fires are a decrease of 110, or 66%, from the 699 residential building fires reported in 2007.

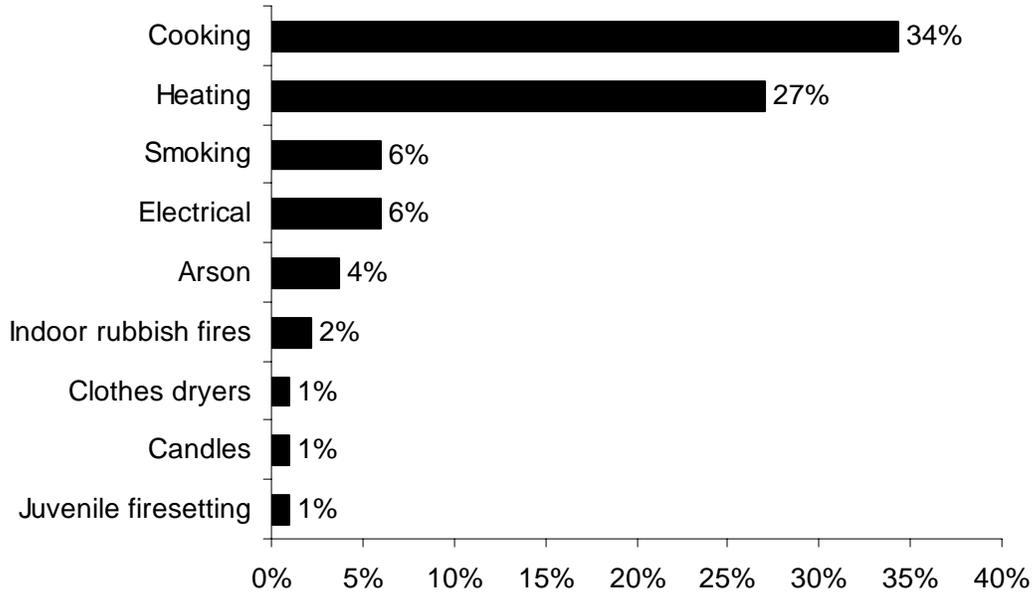

1- & 2-Family Homes Accounted for 70% of Residential Building Fires

The peak fixed property uses for residential building fires were 1- & 2-family homes, accounting for 70% of the residential building fires in Plymouth County; 24% occurred in apartments. Two percent (2%) occurred in rooming houses, and 1% occurred each in hotels or motels and residential board and care facilities. Less than 1% occurred in barracks or dormitories. Thirteen (13), or 2% of the residential building fires in Plymouth County occurred in unclassified residential buildings.

Cooking & Heating Leading Causes of Residential Fires

The leading cause of the 589 residential building fires in Plymouth County was unattended cooking and other unsafe cooking practices, accounting for 34% of these fires. Heating problems caused 27% of the fires in people's homes. Smoking and electrical problems each caused 6% of these fires. Arson caused 4% of residential fires. Indoor rubbish fires caused 2% of these fires. Clothes dryers, candles and juvenile-set fires each caused 1% of the residential fires in Plymouth County in 2008.

2008 Leading Causes of Fires in Plymouth County Homes

56% of Residential Building Fires Are Confined to Non-Combustible Containers¹

Three hundred and thirty-six (336), or 57% of all residential building fires, were reported as confined to non-combustible containers in 2008. One hundred and seventy-nine (179) of the reported fires were cooking fires contained to a non-combustible container accounting for 30% of residential building fires. Eighty-one (81), or 14%, of all residential building fires reported in 2008 were fires confined to a chimney. Sixty-three (63), or 11%, were fires confined to a fuel burner or boiler malfunction. Thirteen (13), or 2%, of these fires were contained rubbish fires.

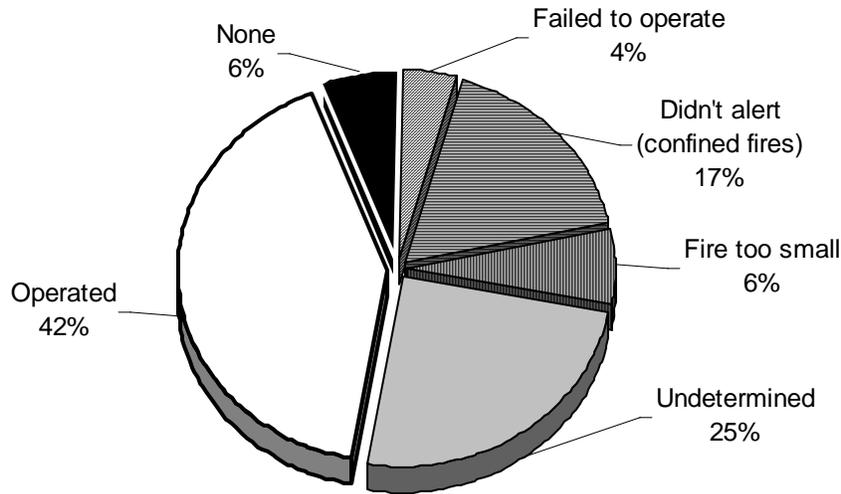

Detectors Alerted Occupants in 42% of Fires

Smoke or heat detectors operated and alerted the occupants in 243, or 42%, of the residential building fires. In 17% of these fires², the detectors did not alert the occupants. Detectors were present but did not operate in 4% of these incidents. In 6% of these fires, no detectors were present at all. The fire was too small to trigger the detector in 6% of the residential fires. Smoke detector performance was undetermined in 146 incidents, or 25% of Plymouth County’s residential building fires.

¹ In MFIRS v5 a fire in a building contained to a non-combustible container (Incident Type = 113-118) does not have to have a Fire Module completed. Therefore the following data fields do not need to be completed: Area of Origin, Detector Status, Item First Ignited, Heat Source, Factors Contributing to Ignition, Cause of Ignition, and Equipment Involved In Ignition. These incidents are not included in the analysis of these fields.

² These represent confined fires where it was reported that the detector did not alert the occupants.

Detector Status in Plymouth County's Residential Structure Fires 2008

Almost 1/2 of Failed Detectors Had Missing or Disconnected Batteries

Of the 25 fires where smoke detectors were present but failed to operate, 12, or 48%, failed because the batteries were either missing or disconnected. Three (3), or 12%, did not operate because of dead batteries. Two (2), or 8%, failed because of a power failure, shutoff or disconnect. One (1) detector, or 4%, failed from a lack of maintenance or cleaning. It was undetermined or unclassified in seven cases, or 28%, why the detectors failed to operate.

VACANT BUILDINGS

4% of Building Fires Occurred in Vacant Buildings

Plymouth County reported 31 fires that occurred in buildings that were vacant, under construction or demolition³. This represented 4% of the total 753 building fires reported to MFIRS in 2008. Twenty (20) fires occurred in vacant residential properties. Eight (8) vacant building fires occurred in storage facilities. Three (3) of these fires happened at mercantile and business properties.

Seven (7), or 22%, of the vacant building fires in Plymouth County in 2008 were determined to be intentionally set. Three (3) of these fires occurred in single-family homes. One (1) each happened in an apartment building, an unclassified residence, a shed, and a detached residential parking garage.

³ In version 4 a vacant building was defined by having a Fixed Property Use code in the subsection of construction, unoccupied properties, between 910 & 919. However in version 5, the Property Use is separate from the Building Status. In v5 a building is considered vacant if the Building Status is coded: 1- Under Construction; 3-Idle, not routinely used; 4-Under major renovation; 5-Vacant, secured; 6-Vacant, unsecured; & 7-Being demolished. The building use is coded separately in the Property Use field.

JUVENILE-SET FIRES

14 Juvenile-set Fires

There were 14 reported juvenile-set fires in Plymouth County in 2008. The three structure fires, five brush fires, four special outside fire, and two unclassified fires caused one civilian injury and \$23,030 in estimated damages.

ARSONS

99 Total Arsons — 34 Structures, 9 Vehicles & 56 Other Arsons

Ninety-nine (99), or 6%, of Plymouth County's 1,773 fires were considered intentionally set, or, for purposes of this analysis, arson⁴. The 34 structure arsons, nine motor vehicle arsons and 56 outside and other arsons caused two civilian deaths, one civilian injury, five fire service injuries and an estimated dollar loss of \$1.3 million.

Structure & Outside & Other Arson Up

The total number of reported arson fires increased by eight from the 91 reported in 2007. Reported structure arsons increased by six from 28 the previous year. Motor vehicle arsons decreased three from 12 in 2007. Reported outside and other arsons increased by five from 51 reported the year before.

ALL INCIDENTS

Rescue & EMS Calls Are 59% of All Reported Responses

In 2008, Plymouth County fire departments reported 47,054 responses⁵ to MFIRS. Of these 47,054 incidents, 45,174 non-fire calls were voluntarily reported.

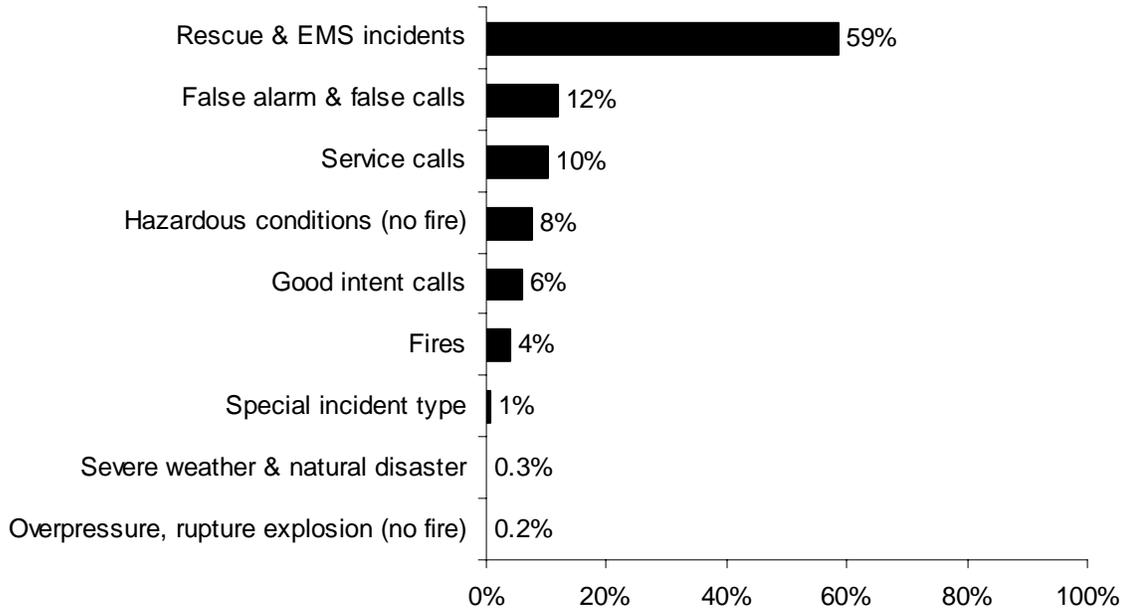

Of these 45,174 non-fire calls 27,643, or 59% of the total responses reported in 2008, were reported rescue and emergency medical services (EMS) calls; 5,601, or 12%, were reported false alarm or false calls; 4,886, or 10%, were reported service calls such as lock-outs, water or smoke problems, unauthorized burning or public service assistance; 3,635, or 8%, were reported hazardous condition calls with no fire; 2,869, or 6%, were reported good intent calls; 301, or 1%, were special incident type calls such as citizen complaints; 145, or 0.3%, were severe weather responses; and 94, or 0.2%, were reported overpressure, rupture, explosion or overheat calls with no fire.

One thousand eight hundred and eighty (1,880), or 4%, of the total responses submitted by Plymouth County fire departments were fires.

⁴ In MFIRS v5 a fire is considered an arson if the Cause of Ignition = 1 (Intentional) and the Age of Person (Fire Module) is greater than 17 or if the field is blank; or if the Wildland Module is used, the Wildland Fire Cause = 7 (Incendiary) and the Age of the Person (Wildland Module) is greater than 17 or if the field is left blank.

⁵ These figures include responses in which Plymouth County fire departments gave mutual aid to other fire departments.

2008 Responses by Incident Type

Plymouth County Fire Departments Gave Mutual Aid 1,838 Times

In 2008, Plymouth County fire departments reported coming to the aid of other fire departments 1,838 times. Of these 1,838 responses, 1,346, or 73%, were for rescue or EMS calls; 234, or 13%, were for service calls such as cover assignments; 107, or 6%, were for fires; 97, or 5%, were for good intent calls; 29, or 2%, were for hazardous conditions calls with no fire; 15, or 1%, were for false alarms or false calls; five, or 0.3%, were for severe weather responses; four, or 0.2%, were special incident type calls; and one, or 0.1%, was a reported overpressure, rupture, explosion or overheat call with no fire.

Plymouth County Received Mutual Aid in 1,965 Incidents

In 2008, Plymouth County fire departments received aid from surrounding departments in 1,965 incidents. Of these 1,965 incidents, 1,662, or 85%, were rescue and emergency medical services calls; 138, or 7%, were for fires; 78, or 4%, were hazardous conditions calls with no fire; 44, or 2%, were false alarms or false calls; 26, or 1%, were good intent calls; 15, or 1%, were service calls; and one each, or 0.1%, was for a reported overpressure, rupture, explosion or overheat call with no fire, one for a severe weather response and one for a special incident type call,

⁶ This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

⁷ These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Heat Source from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires, but is sometimes voluntarily reported.

Item First Ignited⁸	%	Factor Contrib. to Ignit.	%	%Unconfined⁹

Undetermined	31%

⁸ This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

⁹ Some fields in version 5 allow for multiple entries. Therefore the number of entries may be greater than the actual number of incidents being analyzed. These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Factors Contributing to Ignition from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires.

¹⁰ This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

¹¹ These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Cause of Ignition from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires.

Brockton Fires in 2008

197 Total Fires — 142 Structures, 36 Vehicles & 19 Other Fires

The Brockton Fire Department reported 197 fires to the Massachusetts Fire Incident Reporting System (MFIRS) in 2008. The 142 structure fires, 36 motor vehicle fires, seven outside rubbish fires, six brush fires, four special outside fires; and two unclassified fires caused six civilian injuries, 15 firefighter injuries and an estimated dollar loss of \$4.6 million.

All Fires Down in 2008

Total fires decreased by 114 from the 311 incidents reported in 2007. Reported structure fires were down 69 from the 211 reported during the previous year. Motor vehicle fires decreased by 23 from 59 the year before. Outside and other fires decreased by 22 from the 41 reported in 2007.

2008	197	142	36	19	13	9	1	3

BUILDING FIRES

There were 139 building fires of different types in Brockton in 2008. These 139 building fires accounted for 97.9% of all structure fires in Brockton.

83% of Building Fires in Homes

The 139 building fires that occurred in Brockton in 2008 can be broken down by fixed property use as follows: 115, or 83% of all building fires, were in residential properties; seven fires happened in storage facilities; five happened in mercantile or business properties; four fires occurred in institutional facilities; another four fires occurred in a manufacturing or processing facilities; two fires occurred in educational facilities; and another two fires occurred in public assembly properties.

RESIDENTIAL FIRES

Residential Building Fires Down

There were 115 reported residential building fires in Brockton in 2008. These 115 fires are a decrease of 62 from the 177 reported residential building fires reported in 2007.

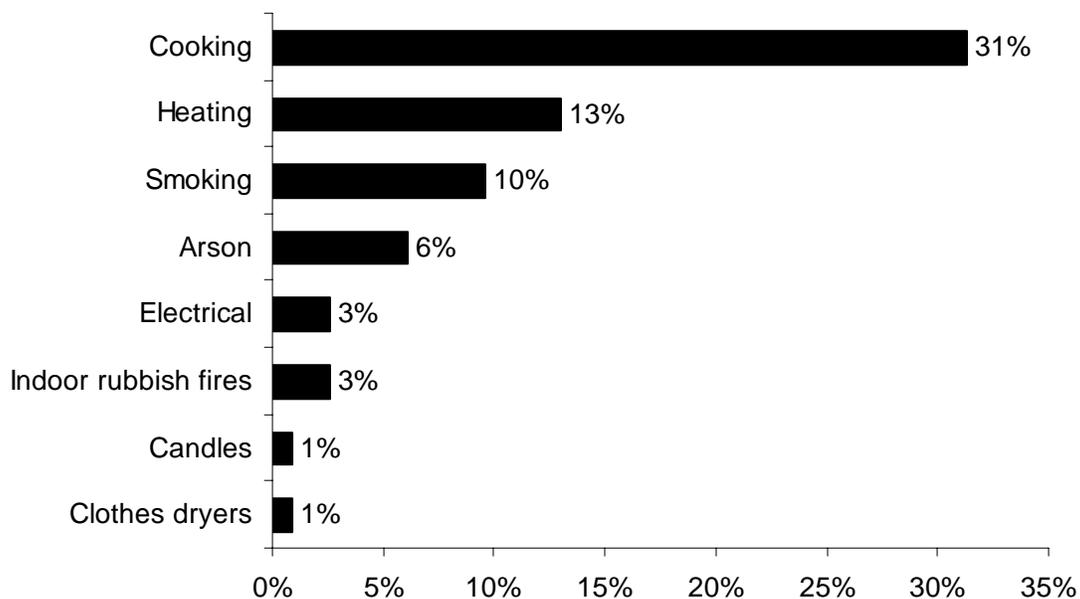

Apartments Accounted for Over 1/2 of Residential Building Fires

The peak fixed property uses for residential building fires were apartments, accounting for 53% of the building fires in Brockton; 41% occurred in 1- or 2-family homes; 2% each happened in rooming houses and hotels or motels; 1% each occurred in dormitories and residential board and care facilities; and 1% occurred in unclassified residences.

Unattended Cooking Leading Cause of Residential Fires

The leading cause of residential building fires in Brockton was unattended cooking and other unsafe cooking practices, accounting for 31% of these fires. Heating fires caused 13% of these fires. Smoking was the cause of 10% of Brockton's residential fires. Arsons caused 6% of these fires. Electrical problems and indoor rubbish fires each caused 3% of the fires. Candles and clothes dryers each caused 1% of the fires in Brockton's residential occupancies in 2008.

2008 Leading Causes of Fires in Brockton Homes

37% of Residential Building Fires Are Confined to Non-Combustible Containers¹

Forty-three (43), or 37% of all residential building fires were confined to non-combustible containers in 2008. Twenty-nine (29), or 25%, of all residential building fires reported in 2008 were cooking fires contained to a non-combustible container. Ten

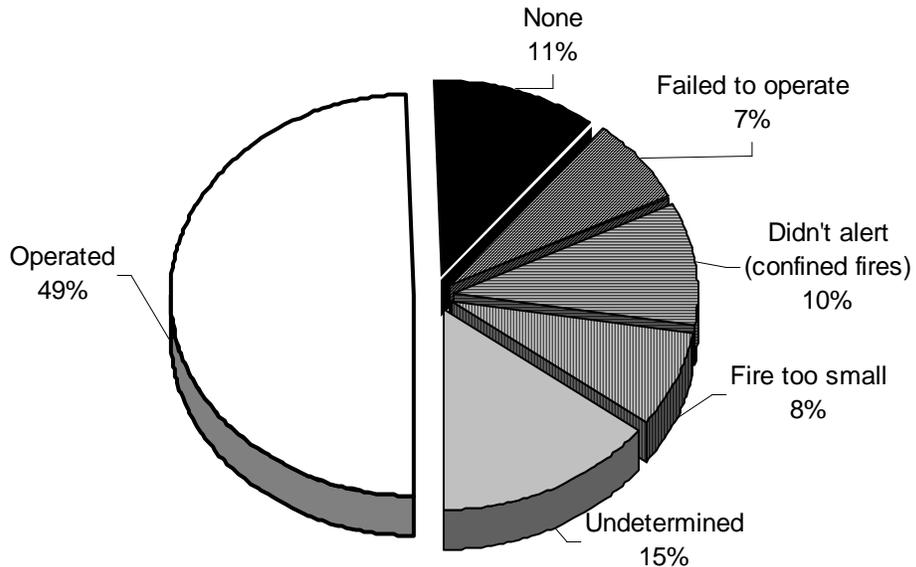

¹ In MFIRS v5 a fire in a building contained to a non-combustible container (Incident Type = 113-118) does not have to have a Fire Module completed. Therefore the following data fields do not need to be completed: Area of Origin, Detector Status, Item First Ignited, Heat Source, Factors Contributing to Ignition, Cause of Ignition, and Equipment Involved In Ignition. These incidents are not included in the analysis of these fields.

(10), or 9%, were fires confined to a fuel burner or boiler malfunction. Two (2), or 2%, of these fires were rubbish fires contained to a non-combustible container. Another two fires, or 1%, were reported to have been contained to a chimney or flue.

Detectors Worked in Almost 1/2 of Fires

Smoke or heat detectors operated and alerted the occupants in 57, or 49%, of the residential building fires. In 10% of these fires², the detectors did not alert the occupants. Detectors were present but did not operate in 7% of these incidents. In 11% of these fires, no detectors were present at all. The fire was too small to trigger the detector in 8% of these fires. Smoke detector performance was undetermined in 17 incidents, or 15% of Brockton's residential building fires.

Detector Status in Brockton's Residential Fires 2008

Almost 2/3 of Detectors Failed Detectors From Missing or Dead Batteries

Of the eight fires where smoke detectors were present but failed to operate, three, or 38%, failed because they had a missing or disconnected batteries. Two (2), or 25%, failed because they had dead batteries. It was undetermined in three cases, or 38%, why the detector failed to operate.

² These represent confined fires where it was reported that the detector did not alert the occupants.

VACANT BUILDINGS

8% of Building Fires Occurred in Vacant Buildings

Brockton reported 11 fires that occurred in buildings that were vacant, under construction or demolition³. This represented 8% of the total 139 building fires reported to MFIRS in 2008. Four (4) 1- or 2-family homes, one apartment building, one business office, one detached residential garage, one storage facility and one outbuilding or shed were reported as vacant building fire incidents.

JUVENILE-SET FIRES

No Juvenile-set Fires in 2008

There were no reported juvenile-set fires in Brockton in 2008.

ARSONS

12 Arsons⁴ - 9 Structure, 1 Motor Vehicle and 3 Outside & Other

Twelve (12), or 7%, of Brockton's 197 fires were considered intentionally set, or, for purposes of this analysis, arson. There were nine structure arsons, one motor vehicle arson and three outside and other arsons.

All Arsons Down in 2008

The total number of arsons decreased by five from the 18 reported in 2007. Reported structure arsons decreased by four from the 13 reported in 2007. Motor vehicle arsons decreased by three from the four reported in 2007. Outside and other arsons increased by two from one reported the year before.

63 Fires Reported as Undetermined or Still Under Investigation

In 2008, Brockton reported 63 fires under investigation or cause undetermined after investigation. Eleven (11), or 17%, of these fires were reported to be undetermined after investigation. The other 52, or 83%, were still under investigation.

Twenty-one (21), or 33%, of these 63 fires were structure fires. Nineteen (19), or 30% were motor vehicle fires; and 23, or 37%, were outside or other fires. Because so many fires or under investigation or undetermined after investigation, the true arson number might be actually higher in Brockton in 2008.

³ In version 4 a vacant building was defined by having a Fixed Property Use code in the subsection of construction, unoccupied properties, between 910 & 919. However in version 5, the Property Use is separate from the Building Status. In v5 a building is considered vacant if the Building Status is coded: 1- Under Construction; 3-Idle, not routinely used; 4-Under major renovation; 5-Vacant, secured; 6-Vacant, unsecured; & 7-Being demolished. The building use is coded separately in the Property Use field.

⁴ In MFIRS v5 a fire is considered an arson if the Cause of Ignition = 1 (Intentional) and the Age of Person (Fire Module) is greater than 17 or if the field is blank; or if the Wildland Module is used, the Wildland Fire Cause = 7 (Incendiary) and the Age of the Person (Wildland Module) is greater than 17 or if the field is left blank.

ALL INCIDENTS

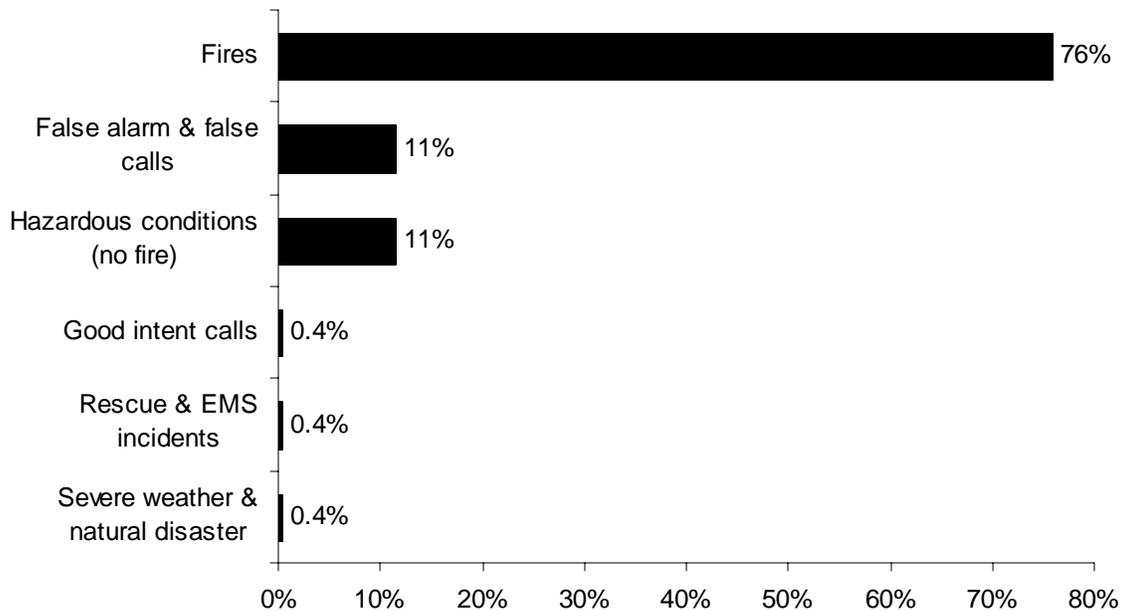

Fire Are Over 3/4 of All Reported Incidents

In 2008, Brockton voluntarily reported 261 incidents to MFIRS. Of these 261 incidents, 63, or 24% were non-fire incidents. Brockton mainly reports only fires to MFIRS, and thus the other 63 non-fire incidents reported to MFIRS for 2008 is only a small fraction of the non-fire calls to which the Brockton Fire Department responds.

Of these 63 non-fire incidents 30, or 11%, were reported hazardous condition calls with no fire; another 30, or 11%, were reported false alarm or false calls; one, or less than 1% of all reported incidents in 2008, were reported rescue and emergency medical services (EMS) calls; and one, or 0.4%, was a good intent call; and another incident, or less than 1%, was a severe weather call.

In 2008, Brockton reported 198 fires⁵, accounting for 76% of all reported incidents.

2008 Incidents by Incident Type

Brockton Gave Mutual Aid in 1 Reported Incident

In 2008, Brockton reported coming to the aid of other fire departments once. This was for a fire in Bridgewater.

Brockton Received Mutual Aid in 14 Incidents

In 2008, surrounding fire departments gave aid to Brockton during 14 incidents. All of these 14 incidents were for fires.

⁵ This includes fires that Brockton responded to as mutual aid calls outside of their jurisdiction.

Worcester County Fires in 2008

4,166 Total Fires — 2,202 Structures, 461 Vehicles & 1,503 Other Fires

Worcester County ranked third out of the fourteen Massachusetts counties in total reported fires. Worcester County fire departments reported 4,166 fires to the Massachusetts Fire Incident Reporting System (MFIRS) in 2008. The 2,202 structure fires, 461 motor vehicle fires, 713 brush fires, 587 outside rubbish fires, 118 special outside fires; three cultivated vegetation or crop fires and 82 unclassified fires caused two civilian deaths, 35 civilian injuries¹, 97 fire service injuries and an estimated dollar loss of \$25 million. Worcester County's fires accounted for 14% of the 30,136 Massachusetts fires reported in 2008.

All 60 fire departments in Worcester County either reported incidents to the Massachusetts Fire Incident Reporting System (MFIRS) or certified that they had no reportable fires in 2008.

All Fires Down

Total fires decreased by 468, or 10%, from 4,634 incidents in 2007. Reported structure fires decreased by 73 from the 2,275 reported during the previous year. Motor vehicle fires decreased by 40 from 501 the year before. Outside and other fires decreased by 355 from 1,858 the year before.

Brush Fires Down by 22%

Brush fires decreased by 201, or 22%, from the 914 reported in 2008. This is a decrease and the main reason for the drop in all Worcester County fires.

WORCESTER COUNTY FIRES FROM 2004 TO 2008

¹ Worcester did not report any civilian fire injuries in 2008.

² The large drop in outside and other fires is mostly from the City of Worcester. 2003 was the first full year that the Worcester Fire Department used MFIRS version 5. In 2004 as in 2003, the Worcester Fire Department reported all of their incidents to MFIRS. In 2004 they reported 2,566 unclassified fires to MFIRS. In 2003 they reported 2,067 unclassified fires. This was a coding quality control issue with the Worcester data. The majority of these fires were misclassified.

Fire and Fire Death Rates

Worcester County had 5.5 fires per 1,000 population. That figure ranks Worcester County second in the state and above the state rate of 4.8 fires per 1,000 population. Worcester County also had 0.03 fire deaths per 10,000 populations ranking it eleventh among Massachusetts counties and below the state rate of 0.08 fire deaths per 10,000 population.

2 Residents Died in 2 Worcester County Fires

- On May 10, 2008, at 5:31 p.m., the Lunenburg Fire Department was called to a fatal smoking fire in an eight-unit apartment building. The victim, a 53-year old man was smoking near his home oxygen equipment in a second floor living room. The cigarette ignited the victim's clothes and the furniture he was sitting on. The victim was able to escape to an outside porch where his girlfriend who was in the back yard, dragged him down the stairs. He was transported to a local hospital where he later succumbed to his injuries. His girlfriend was also burned when she tried to rescue him. Detectors were present and operated. The building was not sprinklered. Damages from the fire were estimated to be \$165,000.
- On December 13, 2008 at 8:10 a.m., the Worcester Fire Department was dispatched to an EMS call. The victim, a 91-year old male, was using a portable propane fueled space heater in the kitchen to keep warm in the aftermath of the severe ice storm that knocked out power, and subsequently his heating system, throughout central Massachusetts. The victim got too close to the space heater and his clothing ignited. He was transported to a local hospital where he succumbed to his injuries 10 days later. There were no other injuries associated with this fire. It was undetermined if detectors were present, but sprinklers were not.

Largest Loss Fire in 2008

- On March 25, 2008, at 4:14 a.m., the Northborough Fire Department was called to an intentionally set fire at strip mall. A molotov cocktail type device started the fire in one of the stores. The fire destroyed five businesses No one was injured at this fire. Detectors were not present, and the building was not sprinklered. Damages from this fire were estimated to be \$2.5 million.

STRUCTURE FIRES

Reported Structure Fires Down

The 2,202 structure fires caused two civilian deaths, 32 civilian injuries, 94 fire service injuries and an estimated dollar loss of \$22.4 million. These incidents represented 53% of Worcester County's reported fires in 2008. The average estimated dollar loss per structure fire was \$10,192. The total number of reported structure fires decreased by 73, or 3%, from the 2,275 reported in 2007.

Arson Caused 2% of Structure Fires

The 36 structure arsons caused 11 fire service injuries and an estimated dollar loss of \$3.2 million. Arson was indicated as the cause of 2% of the structure fires and 14% of Worcester County's structure fire dollar loss. The 36 structure arsons accounted for 25% of the Worcester County arson fires reported in 2008. The total number of reported structure arsons decreased by four, or 10%, from 40 in 2007.

61% of Structure Arsons Occurred in Residences

Sixty-one percent (61%) of Worcester County's 36 structure arsons occurred in residential occupancies; 14% happened in mercantile and business properties; 8% occurred in happened in storage facilities; 6% each happened in public assembly and educational facilities; and 3% occurred each in institutional facilities and special properties in Worcester County in 2008.

BUILDING FIRES

There were 2,176 building fires of different types in Worcester County in 2008. These 2,176 building fires accounted for 98.8% of all structure fires in Worcester County.

86% of Worcester Building Fires Occurred in People's Homes

One thousand eight hundred and sixty-nine (1,869), or 86%, of Worcester County's 2,176 building fires occurred in residential occupancies. Mercantile and business properties had 93 fires. Fifty-six (56) fires took place in public assembly properties, including restaurants and churches. Hospitals, prisons, and other institutional buildings experienced 36 fires. Thirty-five (35) fires took place in storage properties. Thirty-two (32) building fires took place on educational properties. Thirty-one (31) fires took place in manufacturing and processing facilities. Eighteen (18) building fires in Worcester County occurred in special properties such as outbuildings, bus stop shelters and telephone booths. Six (6) fires occurred in industrial, utility, defense, agricultural or mining facilities in Worcester County in 2008.

RESIDENTIAL FIRES**Residential Building Fires Are Down Slightly**

There were 1,869 reported residential building fires in Worcester County in 2008. These 1,869 fires are a decrease of 20, or 1%, from the 1,889 residential building fires reported in 2007.

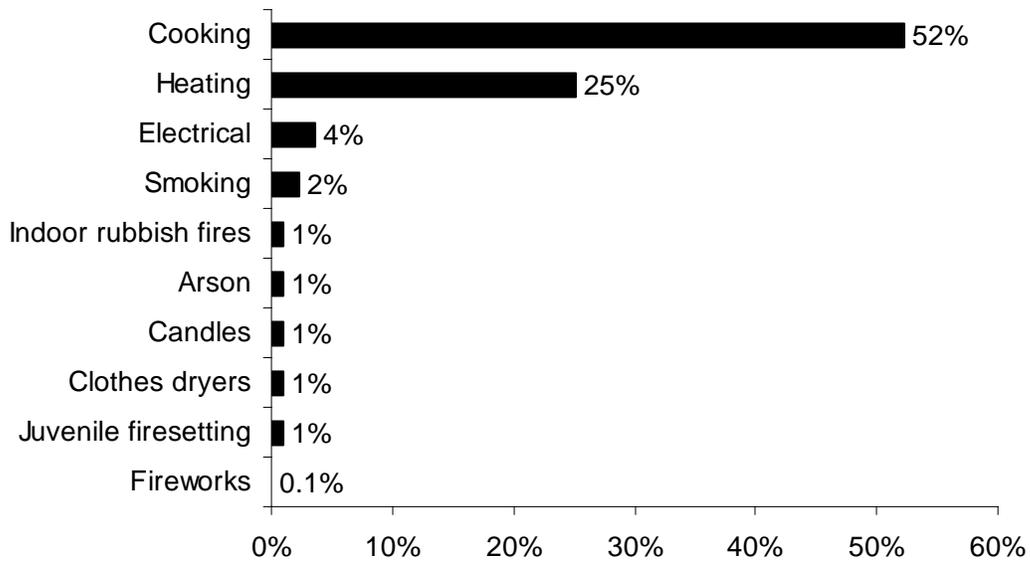

1- & 2-Family Homes Accounted for 47% of Residential Building Fires

The peak fixed property uses for residential building fires were 1- & 2-family homes, accounting for 47% of the residential building fires in Worcester County; 42% occurred in apartments; 5% happened in rooming houses; 4% occurred in dormitories; 1% each occurred residential board and care facilities and in hotels or motels. Eighteen (18), or 1%, of the residential building fires in Worcester County occurred in unclassified residential buildings.

Unattended Cooking Caused Over 1/2 of Residential Fires

The leading cause of residential building fires in Worcester County was unattended cooking and other unsafe cooking practices accounting for 52% of these fires. Heating caused 25% of fires in people’s homes. Electrical problems accounted for 4% of these fires. Smoking fires caused 2% of these fires. Indoor rubbish fires, arsons, candles, clothes dryers, and juvenile-set fires, each caused 1% of the fires in people’s homes in Worcester County in 2008. Fireworks caused less than 1% of these fires in 2008.

**2008 Leading Causes of Fires
in Worcester County Homes**

73% of Residential Building Fires Are Confined to Non-Combustible Containers³

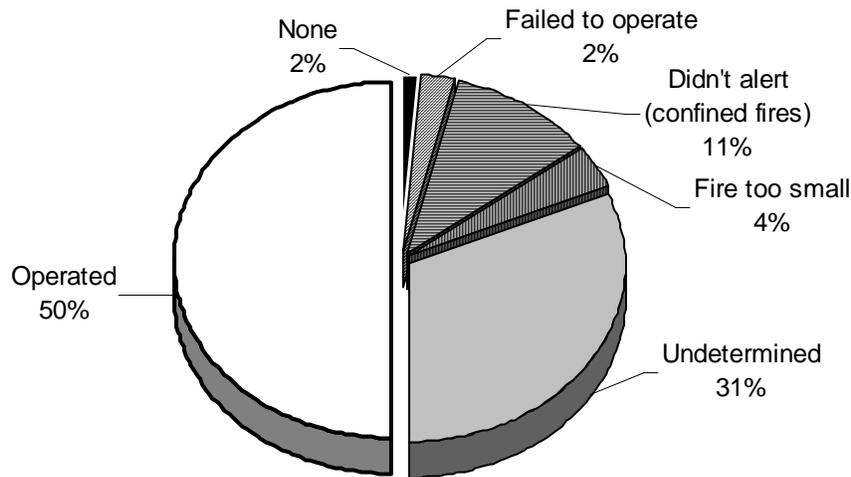

One thousand three hundred and seventy-two (1,372), or 73% of all residential building fires, were reported as confined to non-combustible containers in 2007. Nine hundred and six (906) of the reported fires were cooking fires contained to a non-combustible container accounting for 48% of residential building fires. Two hundred and forty-five (245), or 13%, were fires confined to a fuel burner or boiler malfunction. One hundred and ninety-three (193), or 10%, of all residential building fires reported in 2008 were confined to a chimney. Twenty-five (25), or 1%, of the residential building fires in Worcester County in 2008 were contained rubbish fires; and there were three fires, or less than 1%, that were confined to an incinerator.

³ In MFIRS v5 a fire in a building contained to a non-combustible container (Incident Type = 113-118) does not have to have a Fire Module completed. Therefore the following data fields do not need to be completed: Area of Origin, Detector Status, Item First Ignited, Heat Source, Factors Contributing to Ignition, Cause of Ignition, and Equipment Involved In Ignition. These incidents are not included in the analysis of these fields.

Detectors Alerted Occupants in Just 1/2 of Fires

Smoke or heat detectors operated and alerted the occupants in 932, or 50%, of the residential building fires. In 11% of these fires⁴, the detectors did not alert the occupants. Detectors were present but did not operate in 2% of these incidents. In another 2% of these fires, no detectors were present at all. The fire was too small to trigger the detector in 4% of the residential fires. Smoke detector performance was undetermined in 588 incidents, or 31% of Worcester County’s residential building fires.

Detector Status in Worcester County's Residential Structure Fires 2008

Almost 1/3 of Failed Detectors Had Missing or Disconnected Batteries

Of the 46 fires where smoke detectors were present but failed to operate, 14, or 30%, failed because the batteries were either missing or disconnected. Six (6), or 13%, failed because of a power failure, shutoff or disconnect. Three (3), or 7%, did not operate because they were defective. Three (3), or 7%, did not operate because of dead batteries. Two (2), or 4%, did not operate because of improper installation or placement. One (1) detector, or 2% did not work because of a lack of maintenance. It was undetermined or unclassified in 17 cases, or 37%, why the detectors failed to operate.

VACANT BUILDINGS

2% of Building Fires Occurred in Vacant Buildings

Worcester County reported 51 fires that occurred in buildings that were vacant, under construction or demolition⁵. This represented 2% of the total 2,176 building fires reported

⁴ These represent confined fires where it was reported that the detector did not alert the occupants.

⁵ In version 4 a vacant building was defined by having a Fixed Property Use code in the subsection of construction, unoccupied properties, between 910 & 919. However in version 5, the Property Use is separate from the Building Status. In v5 a building is considered vacant if the Building Status is coded: 1-

to MFIRS in 2008. Thirty-five (35) fires occurred in vacant residential properties. Six (6) vacant building fires occurred in storage facilities. Public assembly properties accounted for four vacant building fire incidents. Three (3) of these fires occurred in manufacturing or processing facilities. Two (2) of these fires occurred in mercantile and business properties; and special properties accounted for one vacant building fire in Worcester County in 2008.

Eight (8), or 16%, of the vacant building fires in Worcester County in 2008 were determined to be intentionally set. Three (3) of these fires occurred in single-family homes. Two happened in apartment buildings; and one each occurred in a bar, a shed and a detached residential parking garage.

JUVENILE-SET FIRES

34 Juvenile-set Fires

There were 34 reported juvenile-set fires in Worcester County in 2008. The 16 structure fires, one motor vehicle fire, 12 brush fires, three special outside fires, one outside rubbish fire, and one unclassified fire caused one civilian injury, one fire service injury and \$88,500 in estimated damages.

ARSONS

143 Total Arsons⁶ — 39 Structures, 21 Vehicles & 90 Other Arsons

One hundred and fifty (143), or 3%, of Worcester County's 4,166 fires were considered intentionally set, or, for purposes of this analysis, arson. The 36 structure arsons, 24 motor vehicle arsons and 83 outside and other arsons caused 11 fire service injuries and an estimated dollar loss of \$3.3 million. Worcester County's arson fires accounted for 12% of the state's total arson fires, but only 28% of the state's total dollar losses from arsons.

All Arson Fires Down Slightly

The total number of arsons decreased by six from 149 in 2007. Reported structure arsons decreased by four from 40 the year before. Motor vehicle arsons increased three from 21 reported in 2007. Outside and other arsons decreased by five from the 88 reported last year.

Under Construction; 3-Idle, not routinely used; 4-Under major renovation; 5-Vacant, secured; 6-Vacant, unsecured; & 7-Being demolished. The building use is coded separately in the Property Use field.

⁶ In MFIRS v5 a fire is considered an arson if the Cause of Ignition = 1 (Intentional) and the Age of Person (Fire Module) is greater than 17 or if the field is blank; or if the Wildland Module is used, the Wildland Fire Cause = 7 (Incendiary) and the Age of the Person (Wildland Module) is greater than 17 or if the field is left blank.

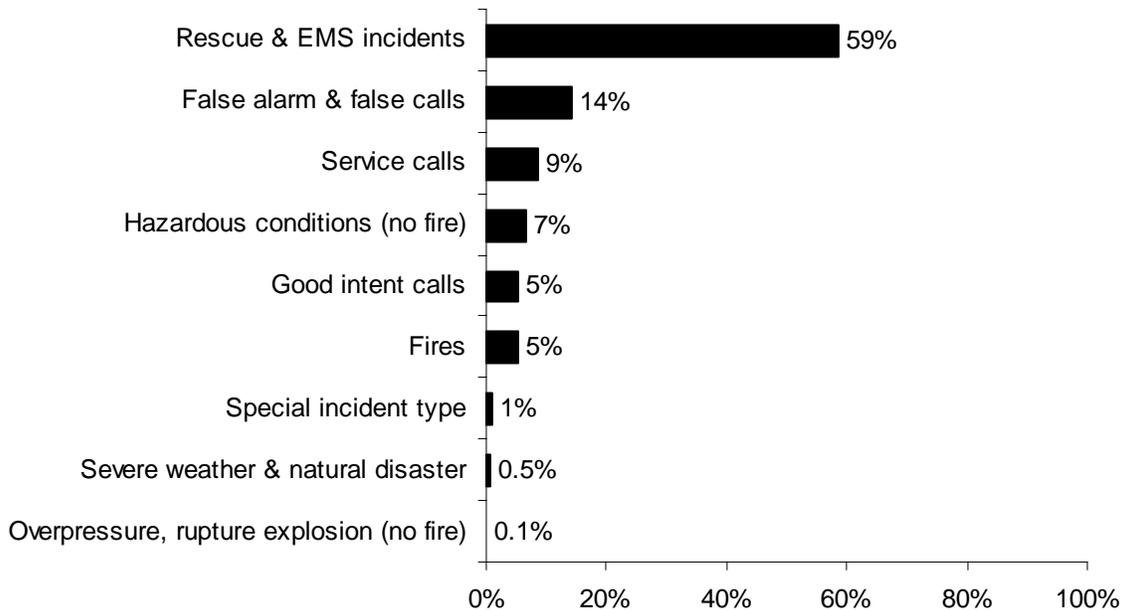

ALL INCIDENTS

Rescue & EMS Calls Are 59% of All Reported Responses

In 2008, fire departments in Worcester County reported 86,742 responses⁷ to MFIRS. This is an increase of 5,378 runs, or 7%, over the 81,364 reported in 2007. Of these 86,742 responses, 82,272 non-fire calls were voluntarily reported.

Of these 82,272 non-fire calls, 50,864, or 59% of all the responses reported in 2008, were reported rescue and emergency medical services (EMS) calls; 12,306, or 14%, were reported false alarm or false calls; 7,457, or 9%, were reported service calls such as lock-outs, water or smoke problems, unauthorized burning or public service assistance; 5,785, or 7%, reported hazardous condition calls with no fire; 4,534, or 5%, were reported good intent calls; 779, or 1%, were special incident type calls such as citizen complaints; 431, or 0.5%, were severe weather calls; and 116, or 0.1%, were reported overpressure, rupture, explosion or overheat calls with no fire.

2008 Responses by Incident Type

Four thousand four hundred and seventy (4,470), or 5%, of the total responses submitted by Worcester County fire departments were fires.

⁷ These figures include responses in which Worcester County fire departments gave mutual aid to other fire departments.

Worcester County Fire Departments Reported Giving Mutual Aid 1,957 Times

In 2008, Worcester County fire departments reported coming to the aid of other fire departments 1,957 times. Of these 1,957 responses, 934, or 48%, were for rescue or EMS incidents; 505, or 26%, were for service calls such as cover assignments; 301, or 15%, were for fires; 95, or 5%, were for good intent calls; 58, or 3%, were for false alarms or false calls; 38, or 2%, were for hazardous conditions calls with no fire; 20, or 1%, were severe weather calls; four, or 0.2%, were special incident types; and two, or 0.1%, were reported overpressure, rupture, explosion or overheat calls with no fire.

Worcester County Fire Departments Received Mutual Aid in 928 Incidents

In 2008, Worcester County fire departments reported receiving aid from surrounding departments in 928 incidents. Of these 928 incidents, 513, or 55%, were rescue and emergency medical services calls; 238, or 26%, were for fires; 74, or 8%, were false alarms or false calls; 50, or 5%, were hazardous conditions calls with no fire; 26 or 3% were good intent calls; 15, or 2%, were service calls; nine, or 1%, were severe weather calls; two, or 0.2%, were special incident type calls; and one, or 0.1%, was a reported overpressure, rupture, explosion or overheat call with no fire.

DECEMBER 11 - 12, 2008 ICE STORM

During the night of December 11, 2008 and morning of December 12, a severe ice storm crippled most of northern Worcester County. Many trees and power lines were downed. Parts of the county lost power and some roads were not passable for up to two weeks. This storm strained the emergency resources of northern Worcester County.

In 2008, Worcester County Fire Departments responded to an average number of 1,637 calls per week. During the week of the ice storm that began on a Thursday night, Worcester County fire departments responded to 3,897 calls. One thousand six hundred and eighty-four (1,684) of these calls occurred on Friday, December 12. The majority of these calls were rescue and EMS calls, as well as hazardous condition calls with no fire like downed power lines and electrical wiring and equipment problems. One of the two 2008 fire related deaths in Worcester County also occurred in the aftermath of this storm.

Item First Ignited¹⁰	%	Factor Contrib. to Ignit.	%	%Unconfined¹¹

(Confined Fires in Non-Combustible Containers)**

Alerted Occupants	50%
Didn't Alert Occupants	15%
Undetermined	35%

¹⁰ This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

¹¹ Some fields in version 5 allow for multiple entries. Therefore the number of entries may be greater than the actual number of incidents being analyzed. These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Factors Contributing to Ignition from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires.

¹² This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

¹³ These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Cause of Ignition from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires.

¹⁴ 2004 was the second year that Worcester used MFIRS version 5. In 2003, for the first time, the Worcester Fire Department reported all of their incidents to MFIRS. In 2004 they reported 2,566 unclassified fires and in 2003 they reported 2,067 unclassified fires to MFIRS. As they became more familiar with the system, the number of unclassified fires decreases while there was a corresponding increase in other types of fires and other types of incidents.

Fitchburg Fires in 2008

334 Total Fires — 242 Structures, 26 Vehicles & 66 Other Fires

The Fitchburg Fire Department reported 334 fires to the Massachusetts Fire Incident Reporting System (MFIRS) in 2008. The 242 structure fires, 26 motor vehicle fires, 43 brush fires, five special outside fires; and three unclassified fires caused three civilian injuries, seven firefighter injuries and an estimated dollar loss of \$1.9 million.

Structure Fires Up in 2008

Total fires decreased by two, or 1%, from the 334 incidents reported in 2007. Reported structure fires increased by 26 from the 216 reported during the previous year. Motor vehicle fires decreased by four from 30 the year before. Outside and other fires decreased by 24 from the 90 reported in 2007.

FITCHBURG FIRES FROM 2004 TO 2008

	Total Fires	Structure Fires	Vehicle Fires	Other Fires	Total Arsons	Structure Arsons	Vehicle Arsons	Other Arsons

2008	334	242	26	66	16	4	3	9

BUILDING FIRES

There were 241 building fires of different types in Fitchburg in 2008. These 241 building fires accounted for 99.6% of all structure fires in Fitchburg.

87% of Building Fires in Homes

The 241 building fires that occurred in Fitchburg in 2008 can be broken down by fixed property use as follows: 210, or 87% of all building fires, were in residential properties; nine happened in mercantile or business properties; eight fires occurred in educational facilities; four fires occurred in public assembly properties; another four fires happened in storage facilities; three fires occurred in institutional facilities; and one fire occurred in a special property.

RESIDENTIAL FIRES

Residential Building Fires Up

There were 210 reported residential building fires in Fitchburg in 2008. These 210 fires are an increase of 37 from the 173 reported residential building fires reported in 2007.

Apartments Accounted for 56% of Residential Building Fires

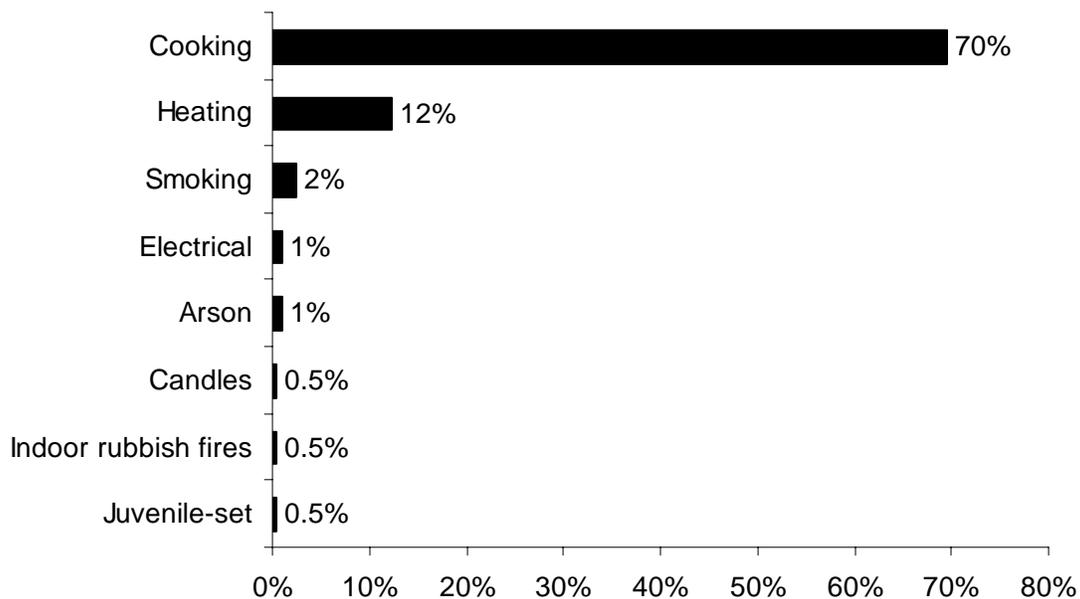

The peak fixed property uses for residential building fires were apartments, accounting for 56% of the building fires in Fitchburg; 25% occurred in 1- or 2-family homes; 7%

occurred in dormitories; 4% happened in residential board and care facilities; 3% happened in rooming houses; and less than 1% occurred in hotels and motels.

Unattended Cooking Leading Cause of Residential Fires

The leading cause of residential building fires in Fitchburg was unattended cooking and other unsafe cooking practices, accounting for 70% of these fires. Heating fires caused 12% of these fires. Smoking caused 2% of residential fires. Electrical problems and arsons each caused 2% of the fires. Candles, indoor rubbish fires and juvenile-set fires were each the cause of less than 1% of the fires in Fitchburg's residential occupancies in 2008.

2008 Leading Causes of Fires in Fitchburg Homes

79% of Residential Building Fires Are Confined to Non-Combustible Containers¹

One hundred and sixty-five (165), or 79% of all residential building fires were confined to non-combustible containers in 2008. One hundred and thirty-seven (137), or 65%, of all residential building fires reported in 2008 were cooking fires contained to a non-combustible container. Twenty-three (23), or 11%, were fires confined to a fuel burner or boiler malfunction. Three (3) fires, or 1%, were reported to have been contained to a

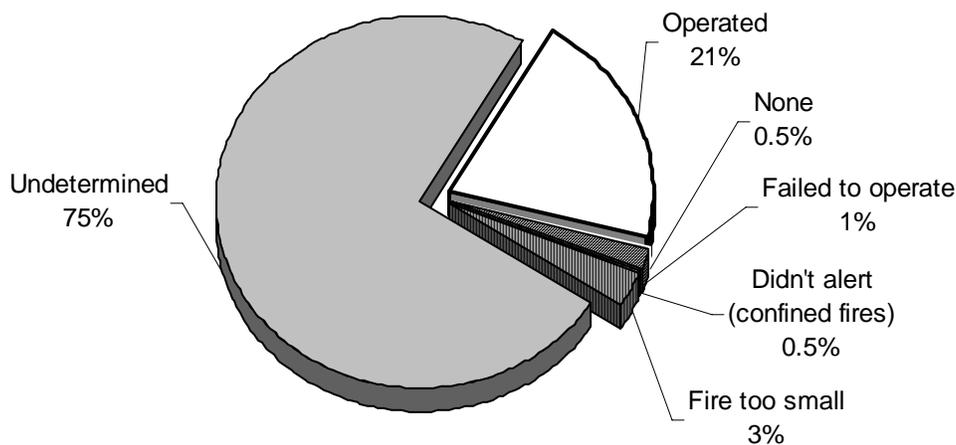

¹ In MFIRS v5 a fire in a building contained to a non-combustible container (Incident Type = 113-118) does not have to have a Fire Module completed. Therefore the following data fields do not need to be completed: Area of Origin, Detector Status, Item First Ignited, Heat Source, Factors Contributing to Ignition, Cause of Ignition, and Equipment Involved In Ignition. These incidents are not included in the analysis of these fields.

chimney or flue. Two (2), or 1%, of these fires were rubbish fires contained to a non-combustible container.

Detectors Worked in Only 21% of Fires

Smoke or heat detectors operated and alerted the occupants in 43, or 21%, of the residential building fires. In less than 1% of these fires², the detectors did not alert the occupants. There were no detectors in less than 1% of these fires. Detectors were present but did not operate in 1% of these incidents. The fire was too small to trigger the detector in 3% of these fires. Smoke detector performance was undetermined in 156 incidents, or 75% of Fitchburg's residential building fires.

Detector Status in Fitchburg's Residential Fires 2008

The lack of data on smoke detector performance in confined fires does not present a true picture of functioning smoke alarms in Fitchburg. Improved collection of data on whether or not the smoke alarms alerted the occupants to the fire would provide a better understanding of this issue.

2 of 3 Detectors Failed Detectors From a Power Shut-off, Failure or Disconnect

Of the three fires where smoke detectors were present but failed to operate, two, or 67%, failed because the power had been shut-off, failed or disconnected. It was undetermined in one case, or 33%, why the detectors failed to operate.

² These represent confined fires where it was reported that the detector did not alert the occupants.

VACANT BUILDINGS

2% of Building Fires Occurred in Vacant Buildings

Fitchburg reported six fires that occurred in buildings that were vacant, under construction or demolition³. This represented 3% of the total 241 building fires reported to MFIRS in 2008. Two (2) apartment buildings, one 1- or 2-family home, one bar or nightclub, one warehouse, and one unclassified vehicle storage facility were reported as vacant building fire incidents.

JUVENILE-SET FIRES

2 Juvenile-set Fires

There were two reported juvenile-set fires in Fitchburg in 2008. The one structure fire and one brush fire caused an estimated damage of \$100.

ARSONS

16 Arsons⁴ - 4 Structure, 3 Motor Vehicle and 9 Outside & Other

Sixteen (16), or 5%, of Fitchburg's 334 fires were considered intentionally set, or, for purposes of this analysis, arson. There were four structure arsons, three motor vehicle arsons and nine outside and other arsons.

All Arsons Remain the same in 2008

The total number of arsons remained the same with 16 reported in both 2008 and 2007. Reported structure arsons decreased by one from the five reported in 2007. Reported motor vehicle arsons increased by two from the one arson reported in 2007. Outside and other arsons decreased by one from the 10 reported the year before.

63 Fires Reported as Undetermined or Still Under Investigation

In 2008, Fitchburg reported 63 fires under investigation or cause undetermined after investigation. Fifty-two (52), or 83%, of these fires were reported to be undetermined after investigation. The other 11, or 17%, were still under investigation.

Twenty (20), or 32%, of these 63 fires were structure fires. Fourteen (14), or 22% were motor vehicle fires; and 29, or 46%, were outside or other fires. Because so many fires are under investigation or undetermined after investigation, the true arson number might be actually higher in Fitchburg in 2008.

³ In version 4 a vacant building was defined by having a Fixed Property Use code in the subsection of construction, unoccupied properties, between 910 & 919. However in version 5, the Property Use is separate from the Building Status. In v5 a building is considered vacant if the Building Status is coded: 1- Under Construction; 3-Idle, not routinely used; 4-Under major renovation; 5-Vacant, secured; 6-Vacant, unsecured; & 7-Being demolished. The building use is coded separately in the Property Use field.

⁴ In MFIRS v5 a fire is considered an arson if the Cause of Ignition = 1 (Intentional) and the Age of Person (Fire Module) is greater than 17 or if the field is blank; or if the Wildland Module is used, the Wildland Fire Cause = 7 (Incendiary) and the Age of the Person (Wildland Module) is greater than 17 or if the field is left blank.

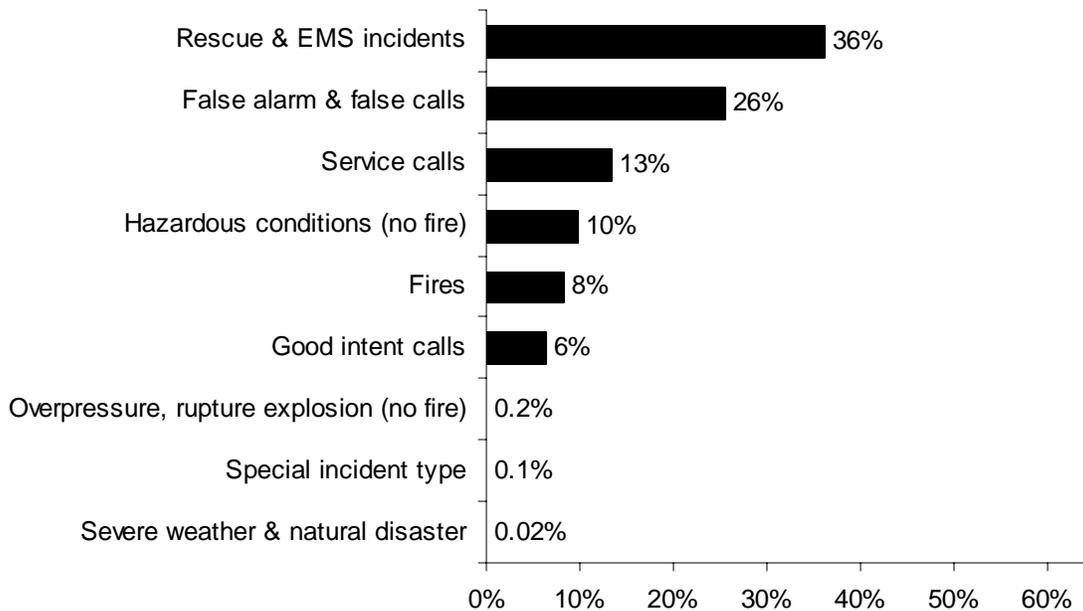

Rescue & EMS Calls Are 36% of All Reported Incidents

In 2008, Fitchburg voluntarily reported 4,096 incidents to MFIRS. Of these 4,096 incidents, 3,756, or 92%, were non-fire incidents.

Of these 3,756 non-fire incidents 1,484, or 36% of all reported incidents in 2008, were reported rescue and emergency medical services (EMS) calls; 1,048, or 26%, were reported false alarm or false calls; 548, or 13%, were reported service calls such as lock-outs, water or smoke problem, unauthorized burning or public service assistance; 401, or 10%, were reported hazardous condition calls with no fire; 260, or 6%, were reported good intent calls; eight, or 0.2%, were reported overpressure, rupture, explosion or overheat calls with no fire; six, or 0.1%, were special type incidents; and one, or 0.02%, was a response to an incident caused by severe weather.

In 2008, Fitchburg reported 340 fires, accounting for 8% of all reported incidents.

2008 Incidents by Incident Type

Fitchburg Gave Mutual Aid in 19 Incidents

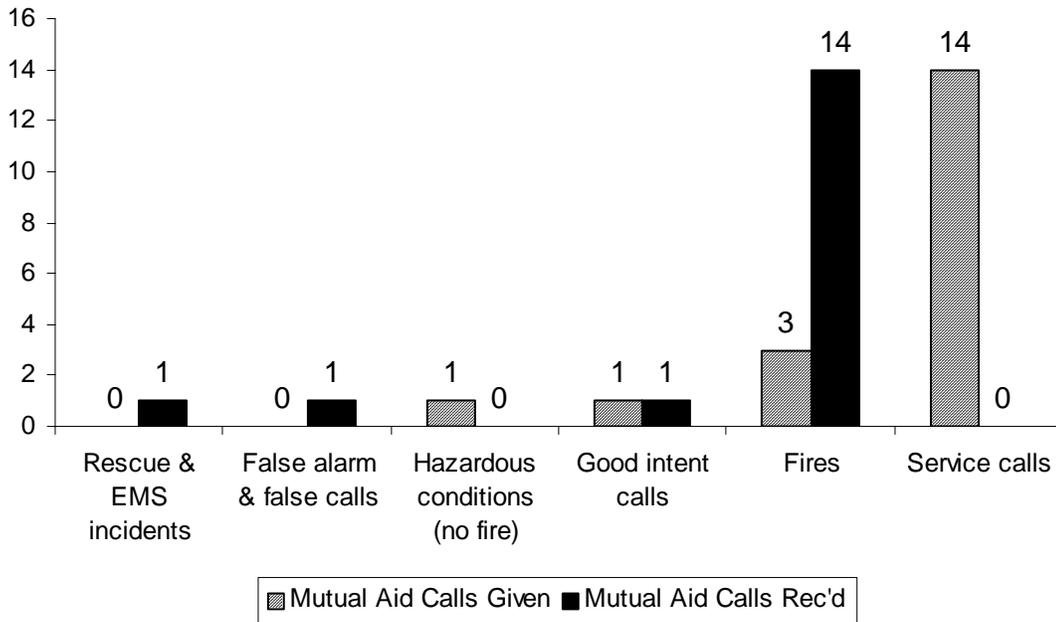

In 2008, Fitchburg reported giving mutual aid to other surrounding fire departments in 19 incidents. Fourteen (14), or 74%, were for service calls; three, or 16%, were for fires; one, or 5%, was for a hazardous condition call with no fire; and another one, or 5% was for a good intent call.

Fitchburg Received Mutual Aid in 17 Incidents

In 2008, surrounding fire departments gave aid to Fitchburg in 17 incidents. Of these 17 incidents, 14, or 82%, were fires; one, or 6%, was a false alarm or false call; one, or 6%, was a good intent call; and one, or 6%, was a rescue or EMS call.

The following chart compares the number of calls that the Fitchburg Fire Department gave mutual aid to a neighboring community compared to the number of calls that a neighboring community assisted Fitchburg. In 2008 Fitchburg was asked to send an apparatus outside of Fitchburg 1.1 times more than they asked neighboring fire departments for help.

Fitchburg's Mutual Aid Calls in 2008

DECEMBER 11 - 12, 2008 ICE STORM

During the night of December 11, 2008 and morning of December 12, a severe ice storm crippled most of northern Worcester County. Many trees and power lines were downed. Parts of the county lost power and some roads were not passable for up to two weeks. This storm strained the resources of fire departments in northern Worcester County. The City of Fitchburg was not spared.

In 2008, the Fitchburg Fire Department responded to an average number of 77 calls per week. During the week of the ice storm that began on a Thursday night, Fitchburg responded to 265 calls. One hundred and twenty-six (126) of these calls occurred on Friday, December 12. The majority of these calls were hazardous condition calls with no fire like downed power lines, shorted electrical equipment and water problems, EMS calls and false alarms.

Item First Ignited⁷	%	Factor Contrib. to Ignition	%	%Unconfined⁸

Severe weather & natural disaster	1	0.02%

⁷ This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

⁸ Some fields in version 5 allow for multiple entries. Therefore the number of entries may be greater than the actual number of incidents being analyzed. These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Factors Contributing to Ignition from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires.

⁹ This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

¹⁰ These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Cause of Ignition from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires.

¹¹ This includes the fires that Fitchburg responded to outside of their jurisdiction as mutual aid given.

Worcester Fires in 2008

1,449 Total Fires — 811 Structures, 117 Vehicles & 521 Other Fires

The Worcester Fire Department reported 1,449 fires to the Massachusetts Fire Incident Reporting System (MFIRS) in 2008. The 811 structure fires, 117 motor vehicle fires, 119 brush fires, 390 outside rubbish fires, and 12 special outside fires caused one civilian death, one civilian injury, 72 fire service injuries and an estimated dollar loss of \$6.2 million.

Elderly Male Resident Killed in Ice Storm Related Heating Fire

- On December 13, 2008 at 8:10 a.m., the Worcester Fire Department was dispatched to an EMS call. The victim, a 91-year old male, was using a portable propane fueled space heater in the kitchen to keep warm in the aftermath of the severe ice storm that knocked out power, and subsequently his heating system, throughout central Massachusetts. The victim got too close to the space heater and his clothing ignited. He was transported to a local hospital where he succumbed to his injuries ten days later. There were no other injuries associated with this fire. It was undetermined if detectors were present, but sprinklers were not.

Structure Fires Up in 2008

Total fires increased by 59 from the 1,390 incidents reported in 2007. Reported structure fires increased by 110 from the 701 reported during the previous year. Motor vehicle fires declined by three from 120 the year before. Outside and other fires decreased by 48 from the 569 reported the year before¹.

WORCESTER FIRES FROM 2004 TO 2008

	Total Fires	Structure Fires	Vehicle Fires	Other Fires	Total Arsons	Structure Arsons	Vehicle Arsons	Other Arsons
2004	3,210	355	182	2,671	138	14	28	96
2005	1,239	690	166	383	35	11	15	19
2006	1,312	635	119	558	45	12	8	25
2007	1,390	701	120	569	29	14	6	9
2008	1,449	811	117	521	53	18	12	23

BUILDING FIRES

There were 804 building fires of different types in Worcester in 2008. These 804 building fires accounted for 99% of all structure fires in Worcester.

¹ The 2,403 unclassified fires in 2004 were a coding quality control issue with the Worcester data. The majority of these fires were misclassified. The sharp increase in structure fires is the misclassifying of incidents in 2004 as 'Fire, other'. Many of these incidents should have been coded as confined structure fires, or as 'non-fire' type incidents such as unauthorized burns, legitimate cooking fires or 'smoke scares'.

87% of Building Fires in Homes

The 804 building fires that occurred in Worcester in 2008 can be broken down by fixed property use as follows: 697, or 87% of all structure fires, were in residential properties; 37 fires occurred in mercantile or business properties; 27 fires took place in public assembly properties; 23 fires took place in institutional properties; 12 fires happened in educational properties; six fires occurred at manufacturing or processing facilities; one fire occurred in a storage facility; and one fire occurred in a laboratory.

RESIDENTIAL FIRES

Apartments Accounted for 58% of Residential Building Fires

The peak fixed property uses for residential building fires were apartments, accounting for 58% of the building fires in Worcester; 20% occurred in one- or two-family homes; 12% occurred in rooming houses; 7% occurred in dormitories; 1% happened in residential board and care properties; another 1% occurred in hotels and motels; and 1% occurred in unclassified residential properties.

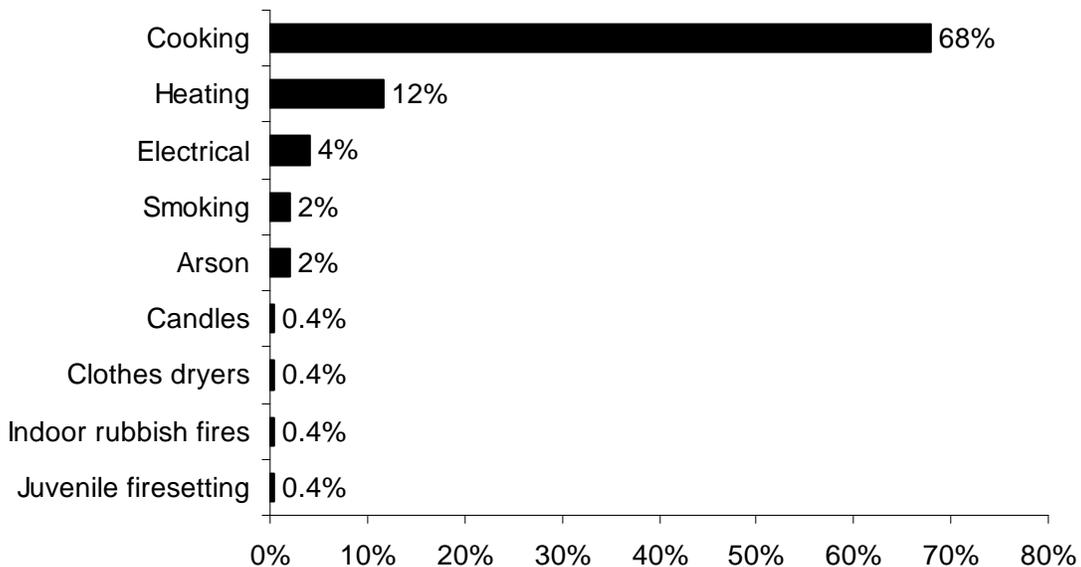

Residential Building Fires Are Up

There were 697 reported residential building fires in Worcester in 2008. These 697 fires are an increase of 100, or 17%, from the 597 residential building fires reported in 2007.

Unattended Cooking Causes Over 2/3 of All Residential Fires

The leading cause of residential building fires in Worcester was unattended cooking and other unsafe cooking practices, accounting for 68% of these fires. Heating fires accounted for 12% of these fires. Electrical fires caused 4% of the fires in Worcester homes. Smoking and arsons each caused 2% of these fires. Candles, clothes dryers, indoor rubbish fires and juvenile-set fires were each responsible for less than 1% of the residential building fires in Worcester in 2008.

**2008 Leading Causes of Fire
In Worcester Homes**

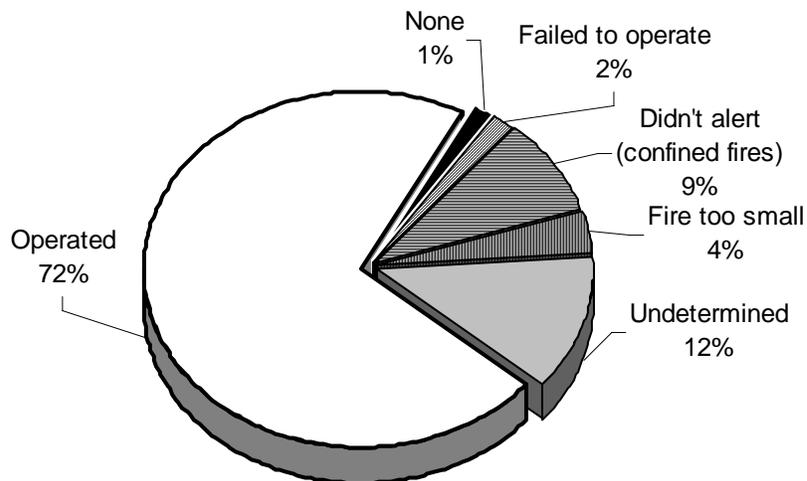

3/4 of Residential Building Fires Are Confined to Non-Combustible Containers²

Five hundred and twenty-four (524), or 75% of all residential building fires were confined to non-combustible containers in 2008. Four hundred and forty-six (446), or 64%, of all residential building fires reported in 2008 were cooking fires contained to a non-combustible container. Sixty-five (65), or 9%, of all residential building fires were fuel burner or boiler malfunctions. Nine (9) of the reported fires were confined to a chimney, accounting for 2% of residential building fires in Worcester in 2008. Three (3) rubbish fires contained to a non-combustible container and one incinerator overload or malfunction each caused less than 1%, of these Worcester's residential fires.

Detectors Alerted Occupants in Almost 3/4 of Fires

Smoke or heat detectors operated and alerted the occupants in 496, or 72%, of the residential building fires. In 9% of these fires³, the detectors did not alert the occupants. Detectors were present but did not operate in 2% of these incidents. In 1% of these fires, no detectors were present at all. The fire was too small to trigger the detector in 4% of the residential fires. Smoke detector performance was undetermined in 85 incidents, or 12% of Worcester's residential building fires.

Detector Status in Worcester Residential Fires 2008

² In MFIRS v5 a fire in a building contained to a non-combustible container (Incident Type = 113-118) does not have to have a Fire Module completed. Therefore the following data fields do not need to be completed: Area of Origin, Detector Status, Item First Ignited, Heat Source, Factors Contributing to Ignition, Cause of Ignition, and Equipment Involved In Ignition. These incidents are not included in the analysis of these fields.

³ These represent confined fires where it was reported that the detector did not alert the occupants.

38% of Failed Detectors Had Missing or Disconnected Batteries

Of the 13 fires where smoke detectors were present but failed to operate, five, or 38%, failed because the batteries were either missing or disconnected. A power failure, shutoff or disconnect caused one, or 8%, of the detectors to fail. A dead battery was responsible for one, or 8%, of the smoke detectors that failed to operate; and a lack of maintenance was the reason for another detector failing, or 8%. It was undetermined in the other five cases why the detectors failed to operate.

VACANT BUILDINGS**2% of Building Fires Occurred in Vacant Buildings**

Worcester reported 17 fires that occurred in buildings that were vacant, under construction or demolition. This represented 2.1% of the total 804 building fires reported to MFIRS in 2008. Eight apartment buildings, six (6) one- or two-family homes, one bar or nightclub, one unclassified business; and one manufacturing facility were reported as vacant building fire incidents.

These 17 vacant building fires caused 16 fire service injuries. That is 0.94, or almost one, firefighter injured per vacant building fire.

JUVENILE-SET FIRES**10 Juvenile-set Fires**

There were 10 juvenile-set fires in Worcester in 2008. The seven structure fires, two brush fires and one outside rubbish fire caused \$20,720 in estimated damages.

ARSONS**53 Total Arsons — 18 Structures, 12 Motor Vehicles, & 23 Other**

Fifty-three (53), or 4%, of Worcester's 1,449 fires were considered intentionally set, or, for purposes of this analysis, arson. The 18 structure arsons, 12 motor vehicle arsons and 23 outside and other arsons caused 11 fire service injuries and an estimated dollar loss of \$511,882.

All Arsons Increased

The total number of arsons increased by 29. This is an 83% increase from the 24 arsons reported in 2007. Reported structure arsons increased by four from 14 the year before. Motor vehicle arsons doubled from the six reported in 2007 to 12. Outside and other arsons increased by 14 from the nine reported the year before.

Worcester reported 166 fires that are still under investigation or undetermined after investigation. This high number of fires with these classifications is one possible reason for the unusually low number of reported arsons in Worcester.

ALL INCIDENTS

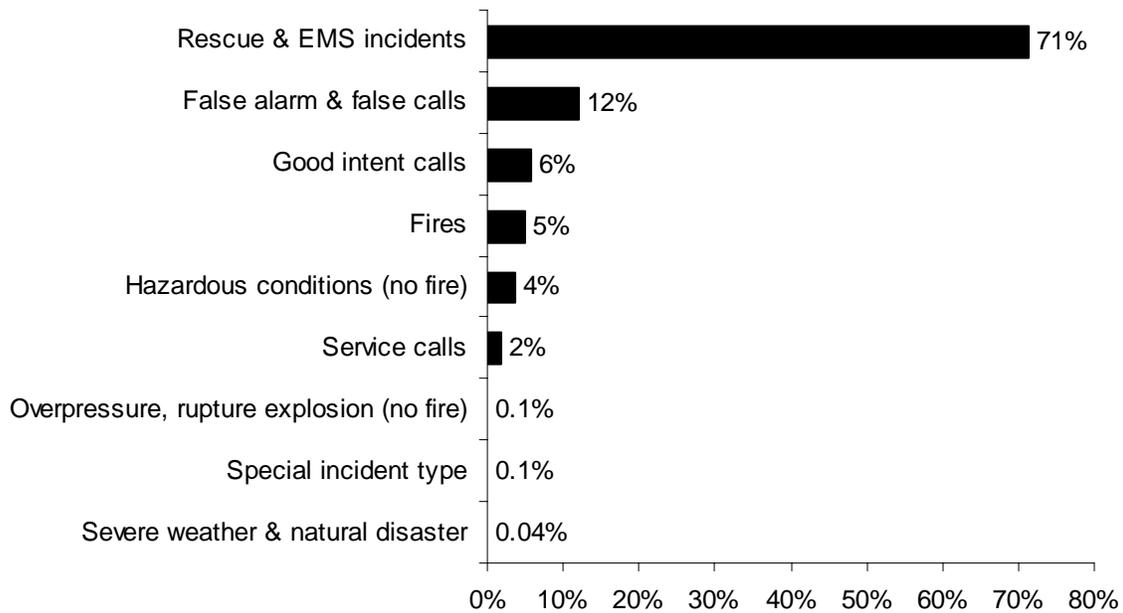

Rescue & EMS Calls Are 71% of All Reported Incidents

In 2008, Worcester voluntarily reported 28,473 incidents to MFIRS. Of these 28,473 incidents, 27,024, or 95%, were non-fire incidents.

Of these 27,024 non-fire incidents 20,285, or 71% of all reported incidents in 2008, were reported rescue and emergency medical services (EMS) calls; 3,430, or 12%, were reported false alarm or false calls; 1,648, or 6%, were reported good intent calls; 1,073, or 4%, were reported hazardous condition calls with no fire; 535, or 2%, were reported service calls such as lock-outs, water or smoke problem, unauthorized burning or public service assistance; 28, or 0.1%, were reported overpressure, rupture, explosion or overheat calls with no fire; 15, or 0.1%, were special type incidents; and 10, or 0.04%, were responses to incidents caused by severe weather.

In 2008, Worcester reported 1,449 fires, accounting for 5% of all reported incidents.

2008 Incidents by Incident Type

Worcester Gave Mutual Aid in 1 Incident

In 2008, Worcester reported giving mutual aid to other surrounding fire departments in one incident. This incident was coded as a special incident type, other.

Worcester Reported Receiving Mutual 2 Times in 2008

In 2008, Worcester reported two incidents in which they received mutual aid from another fire department. One was for a rescue or EMS incident. The other call for mutual aid was cancelled while the companies were en-route.

DECEMBER 11 - 12, 2008 ICE STORM

During the night of December 11, 2008 and morning of December 12, a severe ice storm crippled most of northern Worcester County. Many trees and power lines were downed. Parts of the county lost power and some roads were not passable for up to two weeks. This storm strained the emergency resources of the northern Worcester County. The northern part of the City of Worcester was not spared.

In 2008, the Worcester Fire Department responded to an average number of 537 calls per week. During the week of the ice storm that began on a Thursday night, Worcester responded to 925 calls. Three hundred and fifty-six (356) of these calls occurred on Friday, December 12. The majority of these calls were rescue and EMS calls, as well as hazardous condition calls with no fire like downed power lines and electrical wiring and equipment problems. The only 2008 fire related death in Worcester also occurred in the aftermath of this storm.

⁶ This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

⁷ Some fields in version 5 allow for multiple entries. Therefore the number of entries may be greater than the actual number of incidents being analyzed. These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Factors Contributing to Ignition from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires.

⁸ This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

⁹ These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Cause of Ignition from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires.
