Abstract

This report presents a statistical description of the 3,737 offenders released to the street from the Massachusetts Department of Correction during 1989. This report also presents information on trends among releases over the last five years. Highlights from this report include the following:

- The 3,737 releases in 1989 represent an increase of 291 (8 percent) over 1988 releases and an increase of 1,406 (60 percent) over 1985 releases.
- The number of males released during 1989 increased by 7 percent from 1988, while the number of females released during 1989 increased by 13 percent from 1988.
- Fifty-four percent of all releases were by parole, and 46 percent were by good conduct discharge or expiration of sentence.
- Fifty-six percent were released from maximum or medium security facilities and 44 percent were released from lower security facilities. Many of those released from secure facilities were females serving county sentences or male parole violators.
- The average time served was 54.0 months for individuals serving Cedar Junction sentences, 27.4 months for individuals serving Concord sentences, and 8.0 months for individuals serving Framingham sentences.

Introduction

This report is a statistical description of individuals released to the street from facilities of the Massachusetts Department of Correction during 1989. The tables which follow contain information on the nature of the present offense, personal background characteristics, criminal history, furlough program participation and release characteristics for these individuals. The information contained in these tables was derived from the computerized inmate data base and was produced by the Operations Research Unit on the Regent's Computer Network (RCN). Information is also reported on trends in the release population over the last five years, 1985 to 1989.

Only those individuals who were released to the street by the authority of the Parole Board, by expiration of sentence, or by a certificate of discharge are included in the report. Individuals who were released to another correctional authority or to another sentence are not included. Individuals who were released by any means other than parole, discharge or expiration are not included in the report. This includes releases by court order, death and escape. Individuals transferred to other correctional authorities to serve their sentences who were subsequently released are not included in the report; individuals transferred from other authorities who were subsequently released from a DOC facility are included in the report. Individuals who were released more than once during 1989 are counted as multiple cases in the report.

In reading the tables in this report, the reader should note the following: (1) the release population is divided according to the institution of release; (2) the left number in each cell, in the column marked "N", represents the number of individuals who fall in the corresponding category in the table; (3) the right number in each cell, in the column marked "%", represents the percentage of the number of individuals in a particular category to the total number of releases from that institution (column percents).

For example, upon referring to the table on pages 39-41 committing institution is presented and the following types of information can be obtained:

- (1) the number of releases from each facility in 1989; and,
- (2) the number and percentage of releases from each institution who were originally committed to each of the committing institutions.

The reader should note that the number in the unknown category is relatively high for certain variables, specifically certain social history and criminal history variables. This is due to incomplete community data records at the initial booking, or at the pretrial intake. Caution should be used in interpreting these variables.

Releases From the DOC, 1985 to 1989

During the last five years the number of releases from the DOC increased from 2,331 in 1985 to 3,737 in 1989. This represents an increase of 60 percent. Table 1 (on pages 8 through 10) shows selected characteristics of releases for each year in this period. The increase occurred for both male and female releases. Male releases increased from 1,616 in 1985 to 2,706 in 1989 (67 percent). Female releases increased from 715 in 1985 to 1,031 in 1989 (44 percent).

In 1989, 46 percent of all males were released from maximum or medium security facilities and 54 percent were released from lower security facilities. This represents an increase in the proportion of releases from maximum or medium security facilities when compared to the years 1985-1987 and a decrease in the proportion of releases from higher security when compared to 1988 releases. In contrast, 82 percent of the females were released from higher security facilities and 18 percent from lower security facilities. This is similar to the pattern of prior years.

Most males released from the DOC during the five year period were serving state prison or reformatory sentences. However, there has been an increase each year from 1985-1988 in the proportion of males released from the DOC who were serving county sentences. In 1989, there was a decrease in the proportion of males serving county sentences. Most females released from the DOC were serving county sentences. There is a small proportion of females who were released on state prison or reformatory sentences, which has remained fairly stable over the five year period. The type of sentence that individuals were serving prior to release is shown in Table 1.

The type of release is also shown in Table 1. During 1989, most males were released by parole. Over the five year period, the proportion of males released by

parole has decreased, while the proportion released by expiration of sentence or good conduct discharge has increased. The period from 1985 to 1989 has not shown any changes in the proportion of women who were released by parole or expiration of sentence/good conduct discharge.

The average time served is affected by the institution to which the individual was committed. For 1989 releases the average time served for a Cedar Junction sentence was 54.0 months, the average time served for a Concord sentence was 27.4 months and the average time served for a Framingham sentence was 8.0 months. From the data presented in Table 1, there appears to be an increase in time served for Framingham sentences, from 4.4 months in 1985 to 8.0 months in 1989. For Concord sentences, the time served increased each year for 1984 to 1986, decreased for 1987 and 1988 and increased again for 1989. Overall, there was an increase in average time served from 23.0 months in 1985 to 27.4 months in 1989. Time served for Cedar Junction sentences has decreased each year from 58.5 months in 1985 to 54.0 months for 1989 releases.

Overall, during the past five years the number of releases from the Department have increased each year. The percentage increase has been more marked for males than for females.

A Profile of 1989 Releases

Release Characteristics

Tables 2, 3 and 4 (on pages 14 through 16) present selected characteristics of the offender and the release for 1989 releases. All the other tables that follow show the released population by the institution from which the offender was released. Releases from contract pre-release facilities: Another Chance, Charlotte House, Faith House, Griffin House, Hillside Pre-Release, Meridian House, Neil J. Houston House, and Spectrum House are combined in the category labeled 'CRS'. Also included in the 'CRS' category are contract facilities managed by Massachusetts Halfway Houses, Inc.: Brooke House, McGrath House, and Temporary Housing Program (THP). Releases from Lemuel Shattuck Hospital are included in the following tables as being released from the institution they were in prior to placement at the hospital.

Institution Released From. Table 2 presents information on the specific institution and security level from which individuals were released by the sex of the offender. For male releases, 46 percent were released from maximum or medium security facilities and 54 percent were released from lower security facilities. In contrast, 82 percent of all females were released from maximum or medium security and 18 percent were released from lower security facilities.

Type of Sentence. The second variable examined in Table 2 is type of sentence served for 1989 releases. For females, 88 percent of those released from the DOC during 1989 were serving county sentences which typically are very short. In contrast, 47 percent of the males released from the DOC were serving state prison sentences, and 39 percent were serving reformatory sentences.

Type of Release. For males, the most common type of release was parole, accounting for 63 percent of all releases in 1989. In contrast, 31 percent of the females were paroled. For females, 69 percent of all releases were by expiration of sentence or discharge. In contrast, 37 percent of males were released by good conduct discharge or expiration of sentence.

The information presented in Table 2 show that 2,094 (56%) of the 3,737 releases were from maximum or medium security facilities. A further analysis of releases from these facilities show that 846 (40%) of these releases were females. The large number of females released from higher security facilities is related, in large part, to type of sentence served, i.e., the majority of the females released were serving short county sentences. This explanation does not apply to males because very few serve county sentences. Table 3 shows select information on the 1,248 males released during 1989 from maximum or medium security institutions.

Parole Violator Status. For male releases, the security level released from is often related to parole violator status, that is, many of the releases are actually parole violators being re-released on a sentence. Of the 1,248 releases from secure facilities, 507 (41%) were parole violators, while 741 (59%) were first releases. Parole violators tend to serve a short amount of time from their return until their re-release, which may explain why so many are released from secure facilities.

Split Sentences. Some of the first releases from secure facilities are individuals who received split sentences. A split sentence is divided into a term of incarceration followed by community supervision by the court. There were 136 males with split sentences who were released from secure facilities as first releases. This makes up 18 percent of the 741 individuals who were first releases from secure facilities. Since the time served in prison for persons receiving split sentences is usually short, this hinders transfers to lower security.

Another variable that may explain some of the releases from secure facilities is whether or not the inmate had received lower security placements during his period of incarceration. Past DOC research has shown that the majority of males released from secure facilities had received one or more placements in lower security settings during their incarceration.

Time Served. Table 4 shows time served until first release by committing institution and offense. Time served varies by committing institution (54.0 months for Cedar Junction, 27.4 months for Concord and 8.0 months for Framingham). The average time served has increased for all three committing institutions when compared to time served for 1988 releases: Cedar Junction 48.6 months, Concord 19.1 months, and Framingham 6.0 months. Time served also varies by offense category. For example, individuals committed to Cedar Junction served longest for person offenses (an average of 73.8 months) and shortest for drug offenses (30.0 months); individuals committed to Concord served longest for person offenses (an average of 32.9 months) and shortest for drug offenses (16.9 months); and individuals committed to Framingham served longest for person offenses (an average of 19.9 months) and shortest for offenses in the "other" category (3.4 months).

1. Individuals who were parole violators, were originally committed to another authority or were serving complex sentences (forthwith, split, fines or from & after sentences) were excluded from the analysis.
2. Offenses were selected based on the frequency with which they appear among the releasee group.

Nature of Present Offense

Sentencing Courts. Originally 63 percent of the releases were sentenced in Superior Courts including 19 percent from Suffolk Superior Court, 10 percent from Worcester Superior Court and 10 percent from Middlesex Superior Court. Twenty-five percent of the releases were sentenced in district or municipal courts. Ten percent were transfers from other jurisdictions (out-of-state, federal or county inmates).

Jail Credits. Fifty-five percent of the releases spent time in jail prior to their commitment; 45 percent had spent no time in jail prior to their commitment.

Commitment Institution. Cedar-Junction commitments represented 34 percent of all releases; Concord commitments represented 28 percent of all releases and Framingham commitments represented 28 percent of all releases. There were 386 individuals released (10 percent) who were originally committed to another jurisdiction (most of which were Longwood releases).

Sentence. Most releases (65 percent) were serving either reformatory or county sentences. Seventeen individuals who were serving life sentences were released in 1989. All of the lifers released during 1989 had second-degree life sentences and had been committed for murder 2.

Present Offense. Forty-one percent of the releases were serving sentences for violent offenses (33 percent for person offenses and 8 percent for sex offenses), 21 percent were serving sentences for property offenses, 18 percent for drug offenses and 20 percent for "other" offenses.

Age at Incarceration. The median age at incarceration for the releases during 1989 was 26 years old.

Personal Background Characteristics

Sex. Seventy-two percent of the releases were male and 28 percent were female.

Race. Twenty-five percent of the releases were black and not hispanic and 61 percent were white and not hispanic. There were 8 Native Americans and 5 Asians in the release group. Fourteen percent of all individuals released were Hispanic.

Marital Status. The majority of releases (65 percent) were single at the time of their commitment.

Military Discharge. Of the 3,454 releases for whom military information was known, 88 percent had never served in the military.

Prior Address. The largest group of releases (45 percent) came from the Boston MSA.

Occupation. Most releases whose occupations were known had worked in the areas of manual labor (51 percent) or services (26 percent) prior to commitment.

Education. The median educational level for the 1989 releases was twelfth grade; 87 percent had achieved a ninth grade or higher level of education.

Criminal History

The proportion of unknown cases for the Criminal History variables is 24 percent, the percentages below are based on those cases where criminal history information is known.

Prior Court Appearances. The median age at first court appearance was seventeen years. The median number of court appearances prior to their current commitment was 9. A majority of the releases had previously appeared in court for person offenses (74 percent) and property offenses (79 percent). A minority had

appeared in court for sex offenses (16 percent), alcohol offenses (30 percent) and escapes (8 percent). Fifty-three percent of the releases had court appearances for drug offenses.

Prior Incarcerations. Fifteen percent of the releases during 1989 had prior juvenile commitments, 43 percent of the releases during 1989 had prior incarcerations in a house of correction and 13 percent had prior incarcerations in a state or federal correctional institution. Overall, 48 percent of the releasees had served some time in an adult correctional facility for another commitment.

Prior Paroles. Four percent had been paroled while a juvenile and 45 percent of those had received a parole violation while a juvenile. Eight percent of the releases during 1989 had been paroled as an adult and 72 percent of those had previous parole violations. Overall, 11 percent had been paroled at least once prior to their current release and 66 percent of those had previous parole violations.

Furlough Program Participation

Ten percent of the releases had one or more furloughs during their incarceration; 90 percent had no participation in the furlough program. Eight individuals had one or more furlough escapes (this number includes 2 late over outcomes). Five percent of the 1989 female releasees and 12 percent of the male releasees had one or more furloughs during their present incarceration. The proportion of inmates who took one or more furloughs during their present incarceration decreased from 12 percent for 1988 releases to 10 percent for 1989 releases.

Table 5.

Furlough Program Participation by Sex of Offender, 1989 Releases

	Males		Females		Total	
	Number	Percent	Number	Percent	Number	Percent
<u>Furlough Program Participation</u>						
None	2392	(88)	982	(95)	3374	(90)
One or More	314	(12)	49	(5)	363	(10)
Total	2706	(100)	1031	(100)	3737	(100)
