

From my having attended this morning's "Clean energy" subsidy hearing (8/7/17) held at Holyoke Community College, and from my previous knowledge on the subject of Biomass, I do NOT support the giving of ANY public funds to woody/forest Biomass.

We need to be careful as to what we put into our air; I strongly believe that any residuals from the burning of woody biomass would not benefit anyone's long-term health.

It is time that Massachusetts stop promoting wood heat as a clean fuel and instead, focus on technologies that would better reduce air pollution and greenhouse gas emissions.

Thank you for allowing me and others, the opportunity to attend today's hearing and to submit comments.
