Dear Leominster Retirement Board:

Stone Consulting, Inc. has performed a January 1, 2010 actuarial valuation of the Leominster Contributory Retirement System. This valuation and report was prepared using generally accepted actuarial principles and practices and meets the parameters set by the Governmental Accounting Standards Board Statement (GASB) No. 27. To the best of our knowledge, this report is complete and accurate, and the assumptions used represent our best estimate of anticipated experience of the system.

As part of performing the valuation, Stone Consulting, Inc. was furnished member data by the Leominster Contributory Retirement System's administrative staff. Although examined for general reasonableness, the data was not audited by the actuary. In addition, the administrative staff furnished financial statements that were not audited by the actuary or by the plan's auditors.

The funding objective of the plan is to fully fund the system while attempting to maintain a stable contribution amount for the upcoming fiscal year that is consistent with prior funding schedules or if employer finances allow it, to increase the contribution amount. This funding objective is being met.

We anticipate over time the contribution level to decrease as a percentage of payroll. The contribution rate is determined by adding the normal cost plus an amortization of the unfunded actuarial accrued liability. The normal cost is expected to remain at a level percentage of payroll. The number of years of the amortization and/or the rate of increase of the amortization is adjusted to maintain a stable contribution level for the upcoming fiscal year. The length of the funding schedule contained in this actuarial valuation report is eight years, six years more than the prior January 1, 2008 actuarial valuation with a 2.26% amortization. The amortization increase cannot exceed 4.50% annually. The maximum length of the amortization is until Fiscal 2030. These limits are contained in Chapter 32 of the Massachusetts General Laws. If the Board accepted Section 22F of Chapter 32 these limits would be changed to a maximum length to Fiscal 2040 and the amortization increase can not exceed 4.00% annually.

The contribution amount for Fiscal Year 2011 is \$7,155,958 that is \$20,739 more than the anticipated contribution amount from the prior funding schedule. PERAC and GASB guidelines indicate that actuarial valuations should be conducted at least every other year. The Leominster Contributory Retirement Board conducted their previous actuarial valuation effective January 1, 2008. This satisfies these guidelines.

## INTRODUCTION

This report presents the results of the actuarial valuation of the Leominster Retirement System. The valuation was performed at the request of the Retirement Board as of January 1, 2010 for the purpose of determining the contribution requirements for Fiscal Year 2011 and beyond. The contribution requirements are based on:

- The financial condition of the system as of December 31, 2009
- The benefit provisions of M.G.L. Chapter 32;
- The demographics of members in the system (i.e., active and inactive participants, retirees and beneficiaries as of January 1, 2010);
- Economic assumptions regarding salary increases and investment earnings; and
- Other actuarial assumptions (i.e., terminations, retirement, death, etc.)

## JANUARY 1, 2010 VALUATION SUMMARY

	January 1, 2010	January 1, 2008	Change
<b>Contribution Fiscal 2011</b>	\$7,155,958	\$7,135,219	\$20,739
<b>Funding Schedule Length</b>	8 years	2 years	6 years
<b>Amortization Increase</b>	2.26% <sup>1</sup>	0.00%	2.26%
<b>Funding Ratio</b>	70%	84%	(14%)
<b>Interest Rate Assumption</b>	8.00%	8.00%	0.00%
<b>Salary Increase Rate Assumption</b>	4.75%	4.75%	0.00%

- The Fiscal Year 2011 contribution is \$20,739 more than the planned 2011 contribution. The System experienced a \$28.3 million net actuarial asset loss from calendar year 2007. Stone Consulting, with agreement from the Retirement Board, values assets using market value of assets.

<sup>1</sup>2.25841%; referenced in the report with rounding as 2.26%

## LEOMINSTER RETIREMENT SYSTEM

---

The System experienced a (14.3)% return, (7.4)% annually on the market value of assets versus our assumption of an 8.00% return. The System's asset portfolio, effective December 31, 2009 was 83% equities and alternative investments and 17% fixed income and short-term investments. The interest rate assumption was maintained at 8.00% to reflect anticipated market performance.

- We have kept the salary increase rate at 4.75%, consistent with the 2008 actuarial valuation. Total compensation changed by 3.7% over the prior valuation; however average annual compensation (compensation divided by number of active members) changed by 12.8%, (6.2% annually). This assumption is based on expected future experience.
- The funding level of the Leominster Retirement System is 70% compared to 84% for the January 1, 2008 actuarial valuation. Chapter 68 requires a minimum funding ratio of 65% along with additional criteria in order to avoid being labeled an "under performing system". If you are considered an "under performing system" the system assets are required to be transferred to PRIT. The system is likely to remain over the 65% funding ratio level unless the market has a sustained downturn or there are significant changes to benefit provisions. The funding level is estimated to be in the first quartile of Massachusetts' Contributory Retirement Systems.

The schedule length is eight (8) years. The maximum period (without using Section 22F) permitted under Chapter 32 of the Massachusetts General Laws is 19 years (2030). The amortization percentage was changed from 0.00% to 2.26%, while maintaining the FY2011 contribution level consistent with the prior valuation. The maximum amortization permitted under Chapter 32 is 4.5%.

- Non-economic assumptions were changed from the January 1, 2008 actuarial valuation. The mortality assumption was changed to the RP-2000 mortality table projected 10 years with

Scale AA and the retirement age was extended to age 70 for Groups 1 and 2. The net effect of these changes was to increase the accrued liability by \$77,000.

### VALUATION METHODOLOGY

Stone Consulting, Inc. used the Entry Age Normal actuarial funding method in this actuarial valuation. The use of the Entry Age Normal actuarial funding method is consistent with the requirements of Chapter 32 of the Massachusetts General Laws.

#### NORMAL COST

		January 1, 2010	% of Payroll*
Gross Normal Cost (GNC)	\$	3,105,790	12.7%
Employees Contribution		<u>2,168,278</u>	<u>8.9%</u>
Net Normal Cost (NNC)	\$	937,512	3.8%
Adjusted to Beginning of Fiscal Year 2011	\$	22,008	
Administrative Expense	\$	<u>176,000</u>	0.7%
Adjusted Net Normal Cost With Admin. Expense	\$	1,135,520	

\*Payroll paid in 2009 for employees as of January 1, 2010 is \$24,404,478. Payroll for new hires in 2009 was annualized.

- The gross normal cost (GNC) is the “price” of benefits accruing in the current year if the assumptions underlying the normal cost were realized.
- An individual normal cost represents that part of the cost of a member’s future benefits that are assigned to the current year as if the costs are to remain level as a percentage of the member’s pay. Benefits payable under all circumstances (i.e., retirement, death, disability, and terminations) are included in this calculation.
- Anticipated employee contributions to be made during the year are subtracted from the GNC to determine employer normal cost, or net normal cost (NNC).
- Administrative expenses added to the NNC. The administrative expense does not include investment manager and custodial fees. These fees are considered part of the interest rate assumption that is net of fees.

<b>Active Actuarial Accrued Liability</b>		\$ 62,603,366	11.0%
Superannuation	\$ 52,398,874

Termination	\$ 1,608,242		
<b>Retiree, Inactive, Survivor and Beneficiary Actuarial Accrued Liability</b>		<u>64,444,017</u>	3.8%
Retirees and Beneficiaries	\$ 50,787,120		
Disabled	\$ 12,698,064		
Inactive	\$ 958,833		
<b>Total Actuarial Accrued Liability (AAL)</b>		\$ <u>127,047,383</u>	7.2%
<b>Actuarial Value of Assets (AVA)</b>		\$ <u>88,935,779</u>	-10.2%
<b>Unfunded Actuarial Accrued Liability</b>		\$ 38,111,604	95.3%
<b>Funded Ratio (AVA / AAL)</b>			
2010 (8.00% interest rate):	70%		
2008 (8.00% interest rate):	84%		

- Actuarial Accrued Liability (AAL) is the “price” of benefits attributable to benefits earned in past years, or in other words, represents today’s value of all benefits earned by active and inactive members.
- The total AAL is \$127,047,383. This along with an actuarial value of assets of \$88,935,779 produces a funded status of 70%. This compares to a funded status of 84% for the 2008 valuation.

The chart on the following page is a history of the unfunded actuarial accrued liability (UAL) and the valuation assets (AVA) over the course of the past eight actuarial valuations.

### DEVELOPMENT OF FUNDING SCHEDULE

Net Employer Normal Cost for Fiscal 2011	\$	1,135,520
Amortization	\$	<u>6,020,438</u>
Total Appropriation required for Fiscal 2011	\$	7,155,958

- The funding schedule is composed of the normal cost, and the amortization of the actuarial accrued unfunded liability and is adjusted by the administrative expense assumption. The contribution is assumed to be made at the beginning of the Fiscal Year (July 1).
- The contribution amount for Fiscal 2011 is \$7,155,958. The funding schedule is presented on page 15. The schedule's length is eight (8) years (for the fresh start base) which is six years more than the January 1, 2008 valuation schedule's length.
- In developing the funding schedule, we used a fresh start approach in which the unfunded actuarial accrued liability is reamortized instead of maintaining the existing amortization amount and separately amortizing the actuarial gain or loss. The use of a fresh-start approach results in a funding schedule in which the changes in contribution amounts from year to year are more consistent. The amortization percentage changed from 0.00% from the January 1, 2008 valuation to 2.26%. The maximum amortization increase allowed under Chapter 32 is 4.50%.

- We were furnished with the System's annual report by the Board. The market value of assets as of December 31, 2009 (adjusted for interest due and accrued, payables and receivables) is \$88,935,779.41.
- The asset allocation is approximately 1% cash, receivables, payables and short-term investments, 16% fixed income, and 83% equities and other investments such as real estate and alternative investments.
- Historically, 10 to 11% has been the expected long-term rate of return for equities, and 6 to 7% has been the expected long-term rate of return for fixed income securities. Many economists and investment professionals are projecting lower returns of 6.25 to 9.00% for equities and 3.65 to 6.00% for fixed income securities. In light of these projections, as well as historical investment returns, the 8.00% interest rate assumption is within the reasonable assumption range. We encourage close monitoring for changes in investment performance against expectations.

### ACTUARIAL METHODS AND ASSUMPTIONS

#### Actuarial Methods

1. Actuarial Cost Method  
The Entry Age Normal Actuarial Cost Method has been used in this valuation. Under this method, the normal cost is the amount calculated as the level percentage of compensation necessary to fully fund the prospective benefits from each member's entry age to retirement age.  
  
The actuarial accrued liability represents the theoretical accumulation of all prior years' normal costs for the plan members as if the program had always been in effect. The unfunded actuarial accrued liability is the excess of the actuarial accrued liability over plan assets.
2. Asset Valuation Method  
Market value of assets (adjusted by payables and receivables).
3. Fiscal Year Adjustment  
The actuarial results are adjusted by the valuation interest rate and salary scale to the beginning of Fiscal Year 2011. The unfunded actuarial accrued liability is rolled forward with normal cost and further adjusted by anticipated contributions and interest.

#### Actuarial Assumptions

1. Investment Return  
8.00% per year net of investment expenses. (Same as the prior valuation)
2. Salary Increases  
4.75% per year. (Same as the prior valuation)
