Marine Fisheries Advisory

Commercial Trap Gear Fishery to Open and Small Vessel Speed Limit Lifted Effective Monday, May 8th

Effective Monday, May 8th 2023, the trap gear fishery is open and small vessel speed limit restrictions are lifted in all state waters north and east of Cape Cod. Beginning tomorrow, commercial trap fishers may set their gear in those waters under the jurisdiction of the Commonwealth (i.e. state waters) east and north of Cape Cod up to the New Hampshire border. These waters have been closed to trap gear fishing since February 1. Additionally, mariners operating vessels less than 65' overall length may operate at speeds greater than 10 knots.

The decision to open the trap gear fishery is based on recent aerial and acoustic surveys, which have not detected right whales in Massachusetts waters for several days. Additionally, the copepod resource, which right whales feed on, has declined in state waters. Right whales have demonstrated a consistent pattern of departing from Massachusetts coastal waters in the first two weeks of May.

DMF appreciates the cooperation and patience of all the fishing industry participants and stakeholders. We are sensitive to the challenges these issues can have on fishers who are unable to make plans to begin their trap fishing season.

Spring Trawl Survey: DMF's annual spring trawl survey throughout state waters begins Monday, May 8th. The survey will begin working stations in Cape Cod Bay and then move north through Massachusetts Bay and the North Shore as the week progresses. For more information, please review either the live map on our [website](#) or the tables and maps of station locations in the survey [announcement](#). The live map displays all remaining tow locations. The full screen map (click [see the map in full screen](#)) has a feature which allows you to display your current location. On the upper lefthand side of the map page click the "scope icon" button just below the home button. With the location feature toggled on, your device will display your live location on the map in relation to planned survey stations. This feature can be used to assure gear is not in conflict with planned tows. Please avoid setting gear in survey stations until the trawl survey has passed.

In the event of a delay due to weather, the schedule will be resumed as soon as working conditions permit. Fishers can contact the R/V Gloria Michelle on VHF channels 13 or 16 to determine the updated daily schedule. Cooperation from the fixed-gear fleet is greatly appreciated and is vital to the effective monitoring of marine resources in the Commonwealth. If you have any questions about the survey, please

contact Steve Wilcox, steve.wilcox@mass.gov, (508) 742-9731. For other questions, please contact DMF at marine.fish@mass.gov.
