### *Marine Fisheries Advisory*

### **Quota Monitoring Webpage Malfunction**

---

Earlier today, the Division of Marine Fisheries' quota monitoring webpage malfunctioned. The formula used to update the state's commercial landings effectively double counted landings to date. This resulted in the page demonstrating that landings of quota managed species were approximately two times their actual value - including showing more than 140% of the fluke quota had been landed. This technical problem has since been corrected. The quota monitoring page is updated and now reflects actual state commercial fishery landings for these species. We apologize for any inconvenience this may have caused.

To view our quota monitoring page, please visit our website:
