

## Public Meeting #2 – Springfield, MA February 12, 2020

# Meeting Agenda

- Presentation
  - Welcome and Introductions
  - Meeting Objectives
  - Study Overview
  - East-West Corridor Alternatives Analysis
    - Evaluation criteria
    - Ridership methodology
    - Alternatives analysis
    - Questions and Discussion
- Additional Information and Requests

# Meeting Objectives

Inform

Review the purpose and goals for improving connectivity and mobility in the East – West Corridor

Provide key metrics for assessing benefits, costs and impacts of the 6 Preliminary Alternatives

Learn and Solicit Feedback from Residents and Stakeholders

Are any clarifications needed about the information presented?

# East-West Study Overview

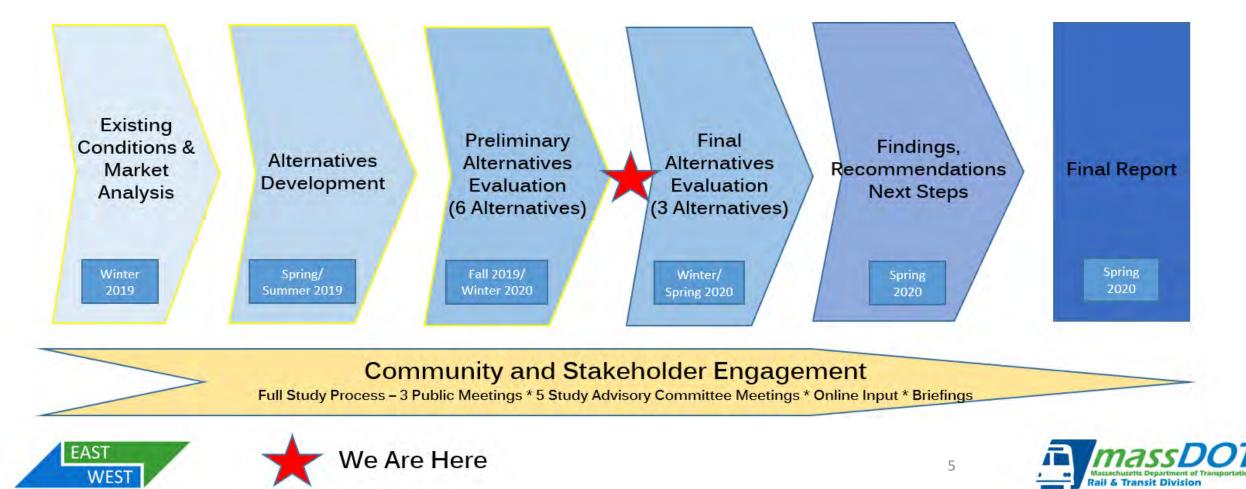

Study Purpose and Process

Existing East – West Corridor Conditions and Issues

Alternatives Development

## Study Purpose and Process

**Purpose**: To conduct a conceptual planning study to evaluate benefits, costs, and impacts of a range of alternatives for improved connectivity and mobility in the East – West Corridor.

## Goals for Service Alternatives

Based on input from Advisory Committee, residents, and stakeholders

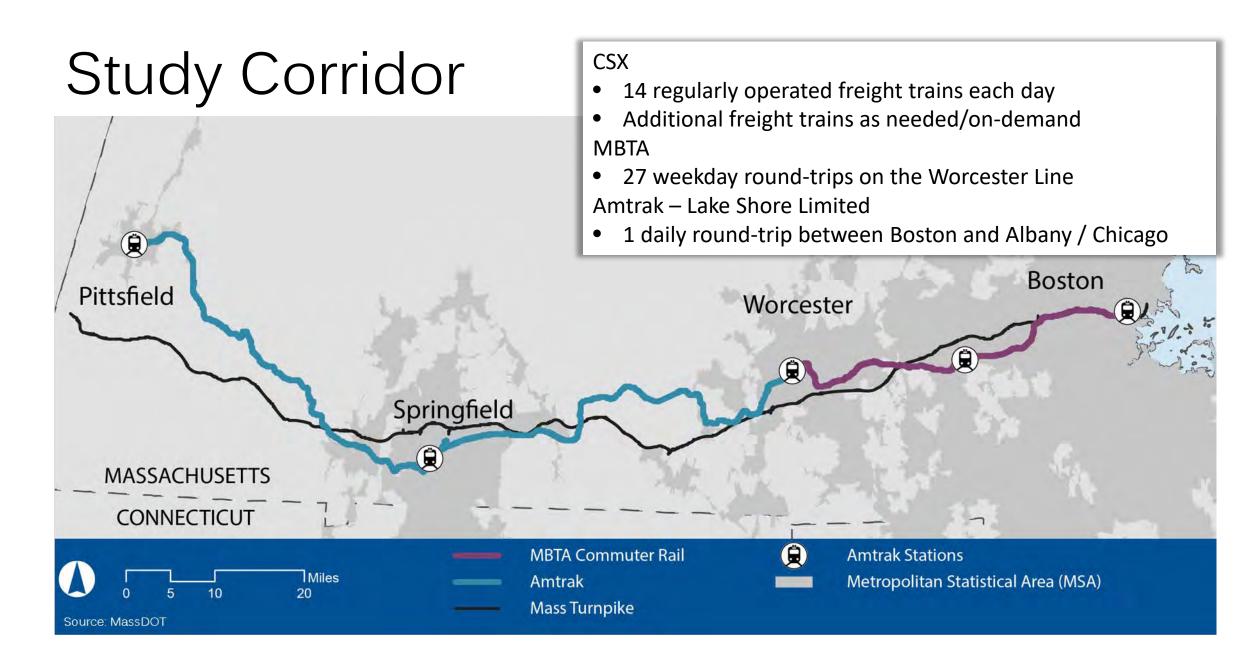

- Provide better transportation options to/from Western MA
- Support economic development
- Improve attractiveness of Western MA as an affordable place to live
- Reduce the number of **automobile trips** along the corridor
- Reduce greenhouse gas emissions and air quality impacts from transportation

#### KEY CONSIDERATIONS

- Impacts to freight
- Environmental and community impacts
- Cost

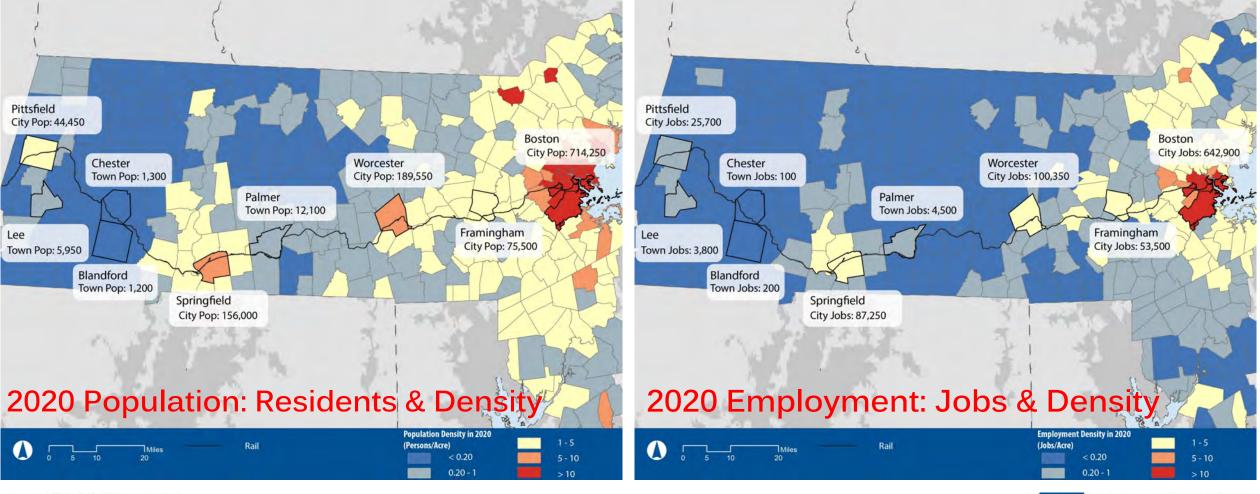

## Corridor Demographics 2020 Population and Employment

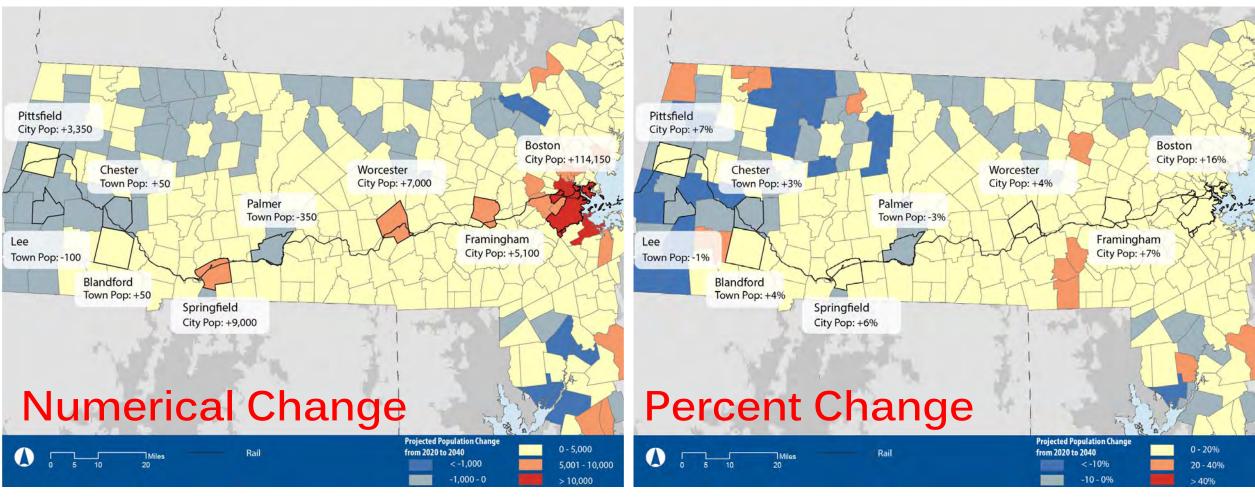

EAST

Source: MPO Long-Range Transportation Plans, 2019 Demographic Projections

## 2020 to 2040 Population Change for Future No-Build

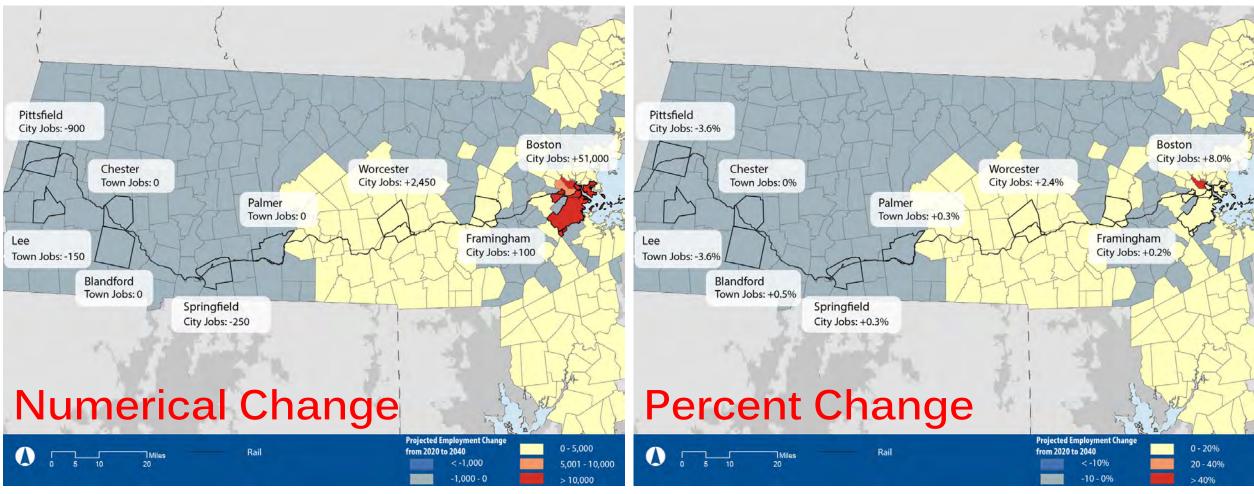

EAST

Source: MPO Long-Range Transportation Plans, 2019 Demographic Projections

## 2020 to 2040 Employment Change for Future No-Build

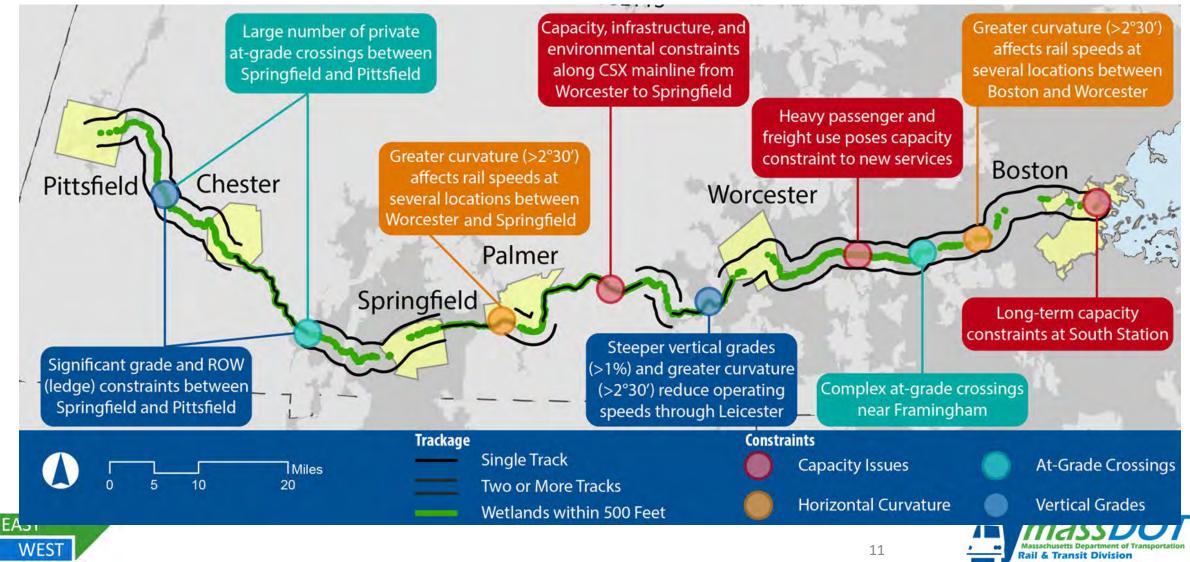

Source: MPO Long-Range Transportation Plans, 2019 Demographic Projections

## Existing Conditions – Physical Constraints

Key Constraints Along the Corridor

# Study Background – Planning Context

- Massachusetts State Rail Plan
  - Recommended East West Rail for further study
- Northern New England Intercity Rail Initiative (NNEIRI)
  - Multi-state passenger rail improvements study
  - Many similarities to potential East – West service
- Rail Vision
  - Range of options for enhancing MBTA commuter rail system

# Study Background – Completed Projects

- Hartford Line Rail
  - Complete and operating
  - Amtrak and CT*Rail* service: New Haven Hartford – Springfield
  - 16 daily round trips
  - Year 1 ridership estimated at 583,500
- Springfield Union Station improvements
  - Improvements to platforms, pedestrian access, station concourse, waiting areas and retail spaces
  - Final improvements new full-length, high-level Platform C opened Jan 24, 2020

# Study Background – Pending Projects

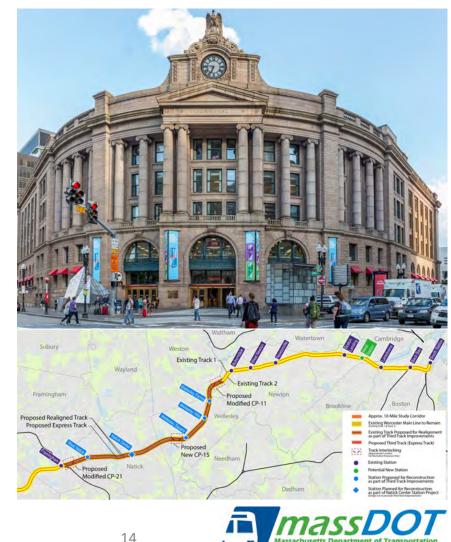

Assumed for analysis, but not funded as part of East – West project (not included in costs)

- Worcester Station Improvements
  - Feasibility and design funded in CIP
  - Track upgrades, full-accessible center platform
- South Station Expansion
  - Expand critical terminal capacity
    - 7 new tracks (20 total)
    - 4 new platforms (11 total)
- Worcester Triple Tracking

EAST

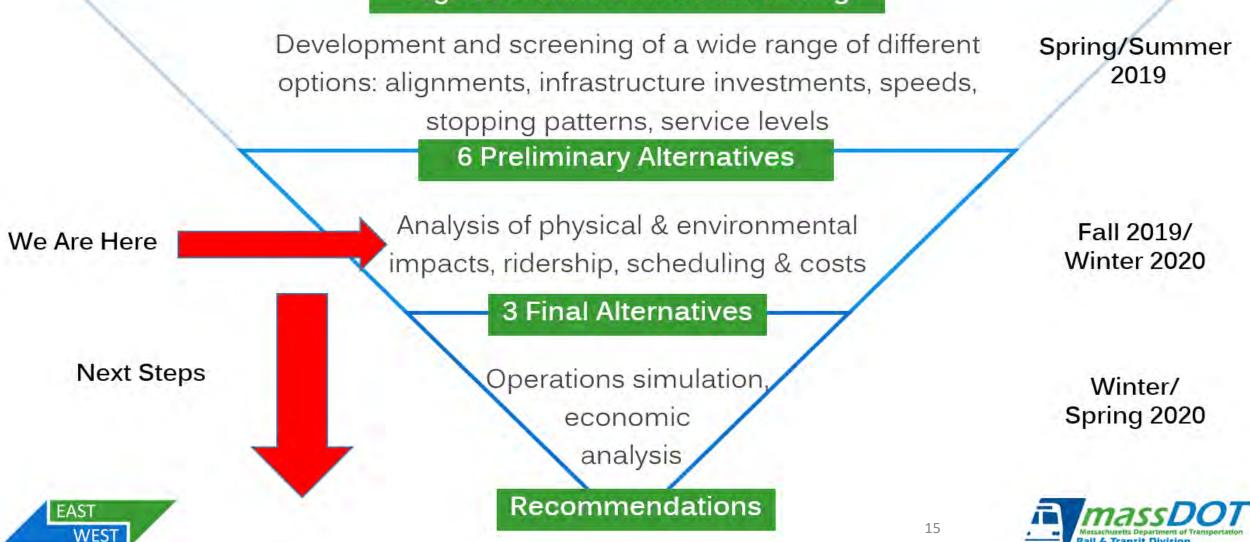

WEST

- Third track on Worcester CR line, Framingham to Wellesley (10 miles)
- Accessibility upgrades for 4 stations (West Natick, Wellesley Square, Wellesley Hills, Wellesley Farms)
  - New Natick Center Station currently in design as separate project
- Improved capacity, schedule flexibility and reliability
- Study underway per current CIP

## Alternatives Development & Analysis

#### **High Level Alternatives Screening**

## Alternatives Development – Key Characteristics

## Corridor type

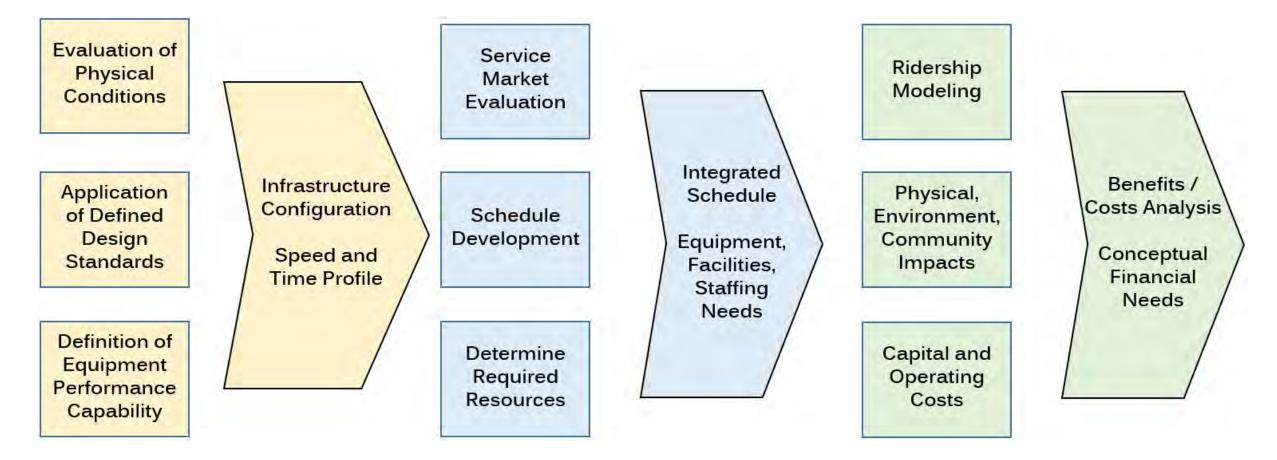

- Shared corridor service on upgraded, double-tracked CSX rail line
- Shared corridor service on new rail infrastructure in CSX corridor
- Separate corridor Massachusetts Turnpike/Interstate 90
- Travel time
  - Travel speed
    - Corridor type (shared v. separate, above)
    - Curvature and grade
    - Track infrastructure
    - Conflicts with other rail traffic MBTA commuter rail, CSX freight, Amtrak
  - Stopping patterns
    - Direct service v. transfers
    - Express/limited stop v. more local stops
- Frequency
- Anticipated impacts

## Initial Alternatives Development Process

Iterative process followed for each Alternative

## Public Feedback Informing Alternatives

Received at Advisory Committee Meeting #1 (Dec 18, 2018), Public Meeting #1 (March 12, 2019), Advisory Committee Meeting #2 (July 23, 2019) and via email/website (~75 comments)

- Rail will spur economic development and quality of life in western MA
- Affordable homes in western MA will become more accessible to people who work in eastern MA
- Rail service should be provided to the smaller towns, such as Palmer and Chester
- Better connections between western & eastern MA are paramount, and could include bus service
- Faster service is a high priority
- Launching service sooner is more of a priority than faster service
- Frequent service (multiple trips per day) is a high priority
- Getting cars off the roads and reducing congestion on I-90 is an important benefit
- It is important to connect other western MA towns to Springfield
- Express service between Springfield and Boston is a priority
- Connections for western MA residents to Logan Airport are important
- Look at other corridors besides the existing CSX route, e.g. the Pan Am Railways "Northern Tier"
- All alternatives should provide service to Pittsfield, Western MA
- Bus is not a good option for any parts of the corridor

## Alternatives Screening – Options Reviewed

19

## **Alternatives Studied**

- Service on shared, upgraded CSX rail line
  - Alternative 1 Springfield Worcester (transfer to MBTA)
  - Alternative 2 Springfield Boston (bus to Pittsfield)
  - Alternative 3 Pittsfield Boston
- Service on new rail line in CSX corridor
  - Alternative 4 Pittsfield Boston
  - Alternative 5 Springfield Boston (bus to Pittsfield)
- Service on new rail line in new corridor (Mass Turnpike corridor)
  - Alternative 6 Pittsfield Boston

In general, speed, frequency, ridership and capital cost progressively increase

# East-West Corridor Alternatives Analysis

Evaluation Criteria

Ridership Methodology

Alternatives Analysis and Results

## Alternatives Analysis – Evaluation Criteria

## • Ridership

- Computer model that forecasts demand based on previously built projects, key characteristics of corridor and service:
  - Corridor demographics (residents & jobs)
  - Key service parameters (speed, frequency, stations served, direct service v. transfers)

## • Physical impacts

- Property impacts buildings/structures, private property, rail & road ROW
- Surrounding infrastructure bridges, roads, utilities
- Environmental and community impacts
  - Wetlands and natural resources impacts
  - Impacts to structures

## Costs and Benefits

- Capital costs railroad construction, surrounding infrastructure, trains
- Operating & maintenance costs
- Monetized benefits (travel time, environmental)

# Ridership Forecasting Methodology

Incremental Ridership Model – Takes actual ridership numbers (from comparable rail services) and adjusts them based on demographic changes and rail service changes

## Base Ridership

- Existing ridership counts
- Assign proxy stations for new or drastically different service

#### Demographics

- Base and Future Year
- Population
- Employment
- Income

## **Rail Service**

- Travel time
- Frequency
- Rail vs. Bus
- One-seat Ride vs. Connections

# Ridership Forecasting Methodology

Proxy stations are chosen to provide a base ridership number for new stations or stations with drastically different service, which are then scaled on both demographics and service to match new stations

Selection Criteria (in order of importance):

- Similar service characteristics (frequency, travel time, fare)
- *Similar* distance between stations
- *Similar* demographics

Primary stations used (to match more of a commuter-focused market):

- Springfield Hartford
  2018 Base Ridership = 75,000
- Springfield Wallingford
  2018 Base Ridership = 5,500

## Ridership Forecasting – Outputs

Model Forecast Ridership

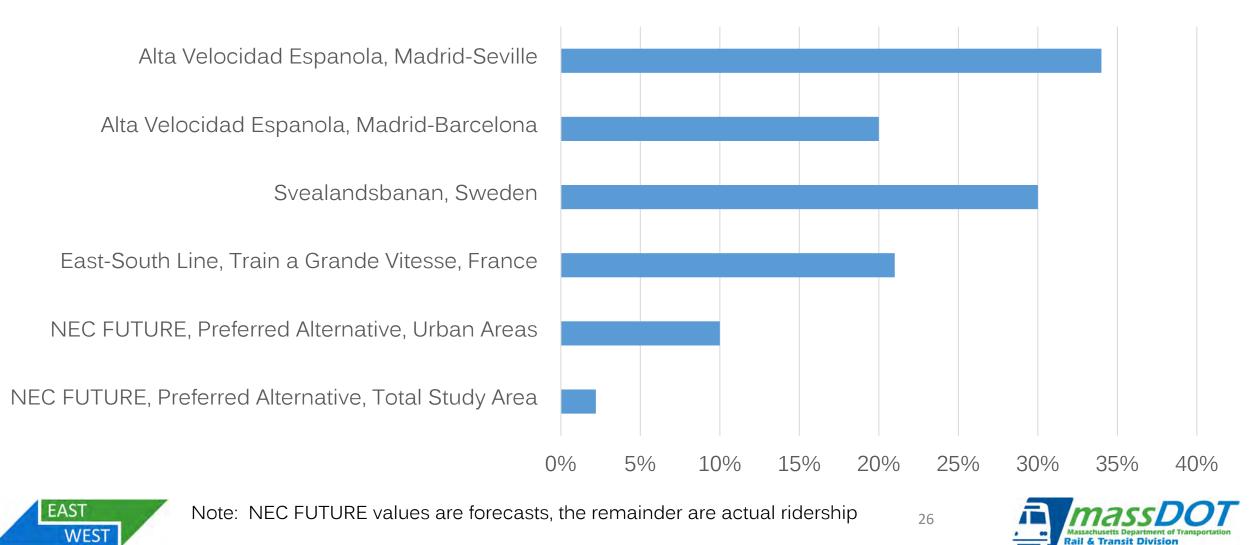

- Annual bi-directional rail ridership
- Estimated using existing ridership, demographic changes, and service changes
- No land use or demographic growth induced by rail service

## Induced Demand

- New trips based on overall improvement of rail transportation network
- Rural markets could see 1-5% increase in trips
- High-speed rail (HSR) projects in urban areas could see up to 20-30% increase in trips

# Examples of Induced Demand for Other Rail Projects

## Who Might Ride the East – West Rail?

#### Regular Commuters ~10%\*

- Live in Western MA
- Commute to BOS/WOR daily/near daily

\* Trip purpose percentages based on 2013 NEC Future travel survey. Daily commuting % likely to increase with higher speeds, more frequent service.

#### Business Travelers ~26%

#### Remote workers

- Work in BOS/WOR area
- Can work remotely
- Travel to worksite several times monthly

#### Western MA Workers

- Regular worksite in Western MA
- Regular travel to BOS/WOR area

#### Personal Travelers ~64%

27

#### Western MA Residents

 Medical, shopping, entertainment travel to BOS/WOR

BOS/WOR Area Residents

 Tourism, entertainment travel to Western MA

#### Students

Live in BOS/WOR area, school in Western MA or vice versa

- More reliable travel times relative to auto travel on congested highways
- Ability to work productively in transit
- Potential to reduce vehicle costs by not owning a car or second car

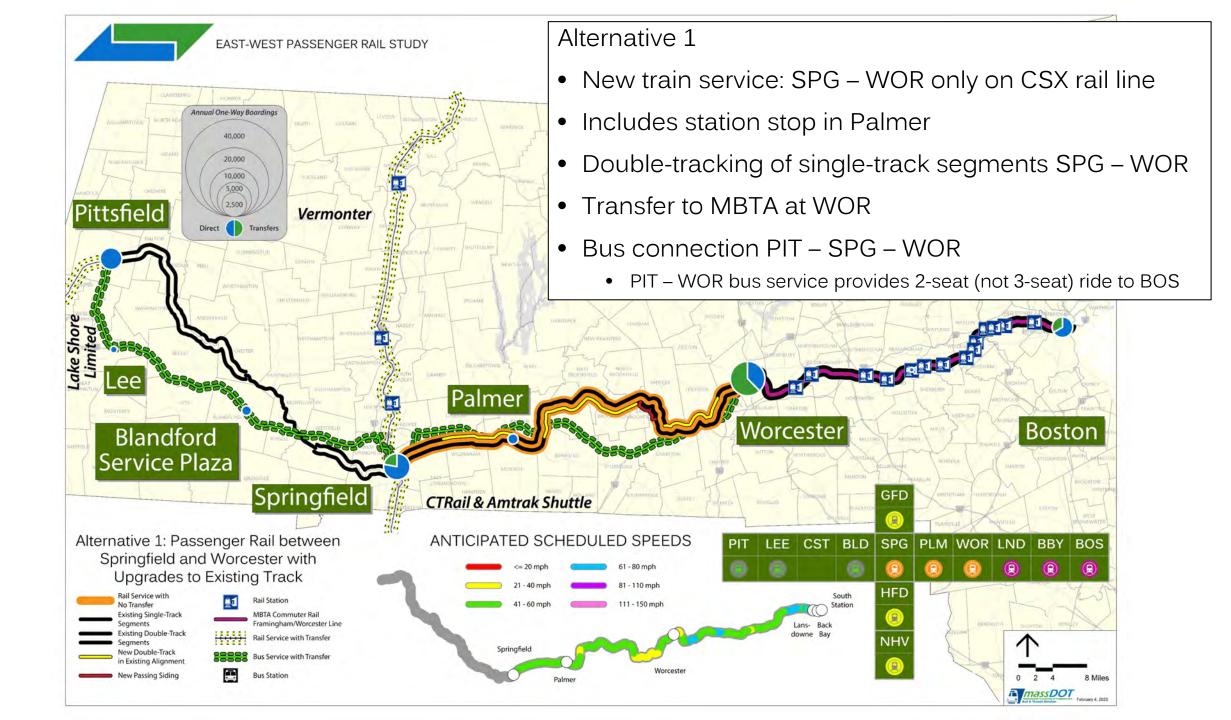

## **Alternatives Studied**

- Service on shared, upgraded CSX rail line
  - Alternative 1 Springfield Worcester (transfer to MBTA)
  - Alternative 2 Springfield Boston (bus to Pittsfield)
  - Alternative 3 Pittsfield Boston
- Service on new rail line in CSX corridor
  - Alternative 4 Pittsfield Boston
  - Alternative 5 Springfield Boston (bus to Pittsfield)
- Service on new rail line in new corridor (Mass Turnpike corridor)
  - Alternative 6 Pittsfield Boston

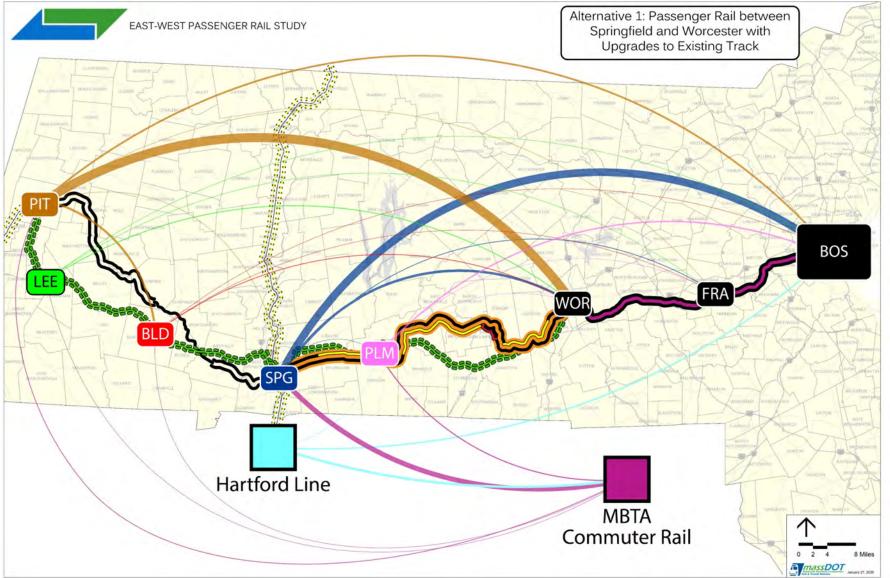

In general, speed, frequency, ridership and capital cost progressively increase

## Alternative 1 – Ridership Patterns

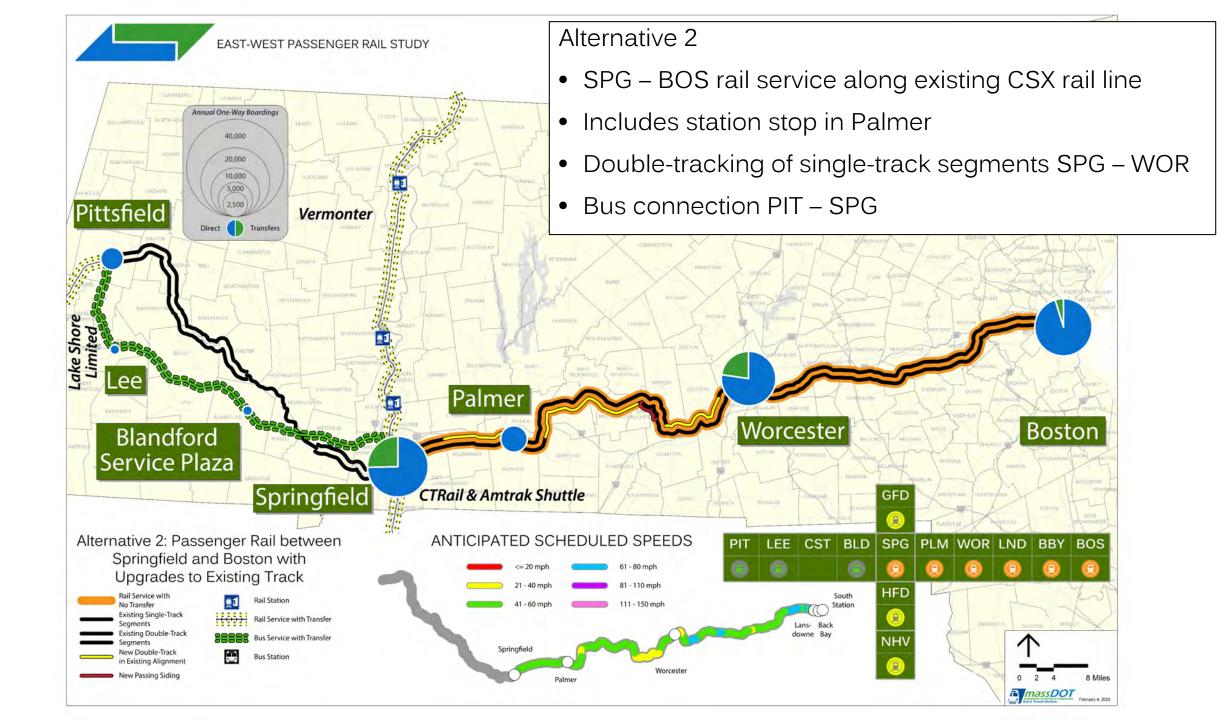

- 36 weekday riders
- Transfers in SPG and WOR result in a "penalty" for attracting riders
- PIT BOS bus ridership – 7 weekday riders

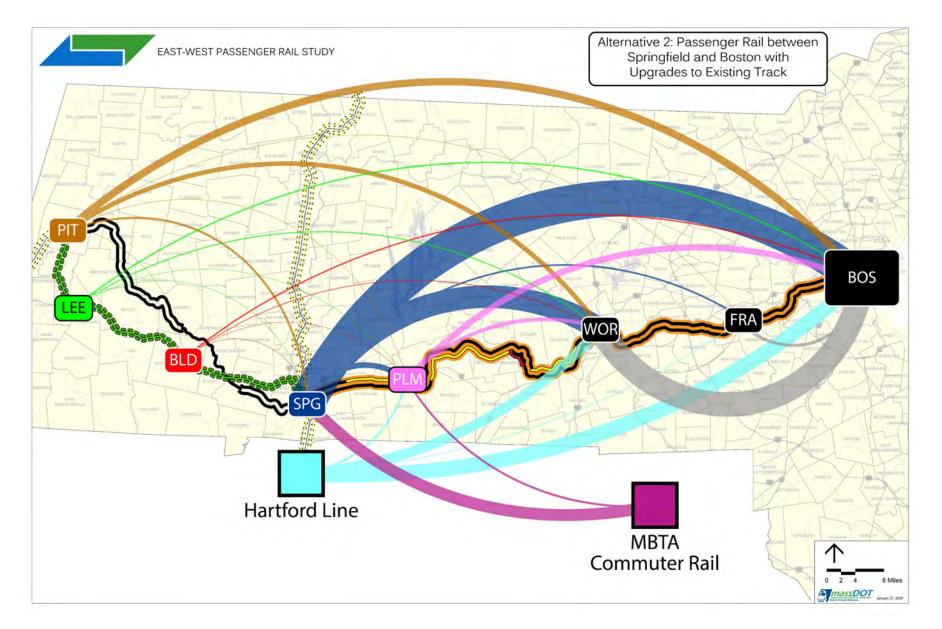

30

## Alternative 3 – Ridership Patterns

- Faster travel times and rail connection to PIT
- 238 weekday riders
- Ridership at almost all stations increases +/- 50% over Alt. 2
- PIT BOS increases
  3x over Alt. 2

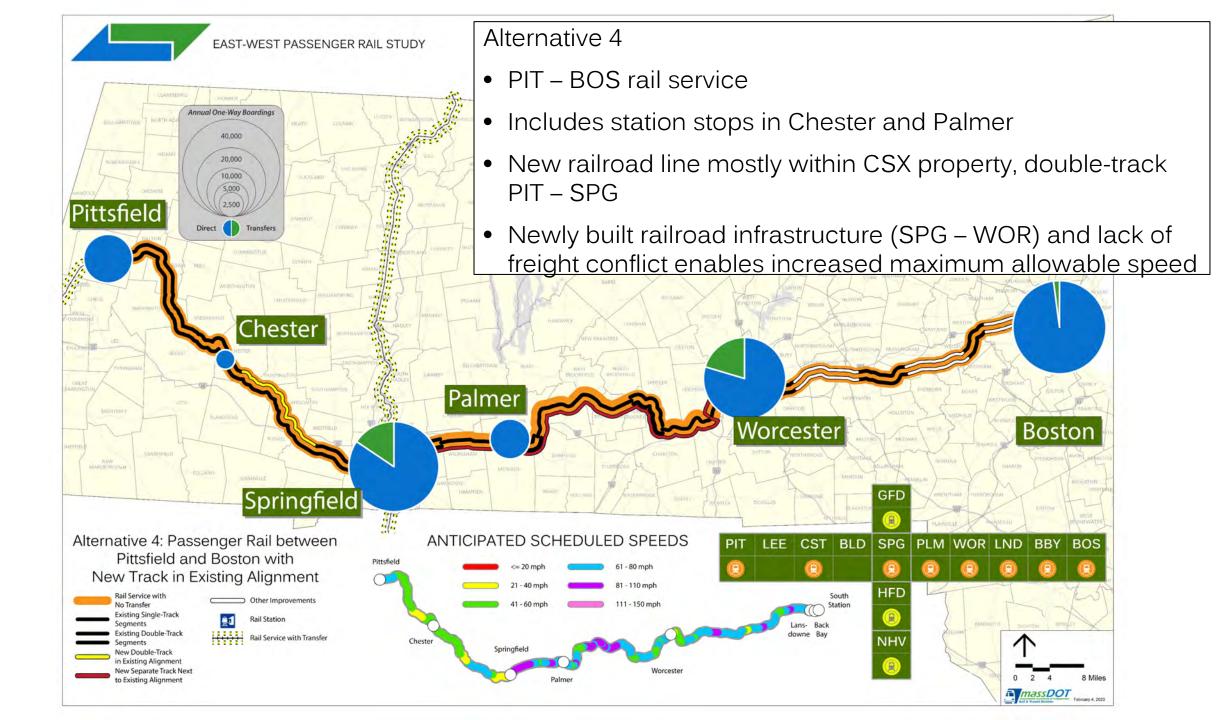

36

Annual O&M Costs

\$51.6 M

## Alternative 4 – Ridership Patterns

- New rail alignment improves travel time
- More frequent service than Alt. 3 (9 round trips per day v. 7 round trips)
- Ridership increases at most stations – 387 total weekday riders
- Total annual ridership more than 60% higher than Alt. 3

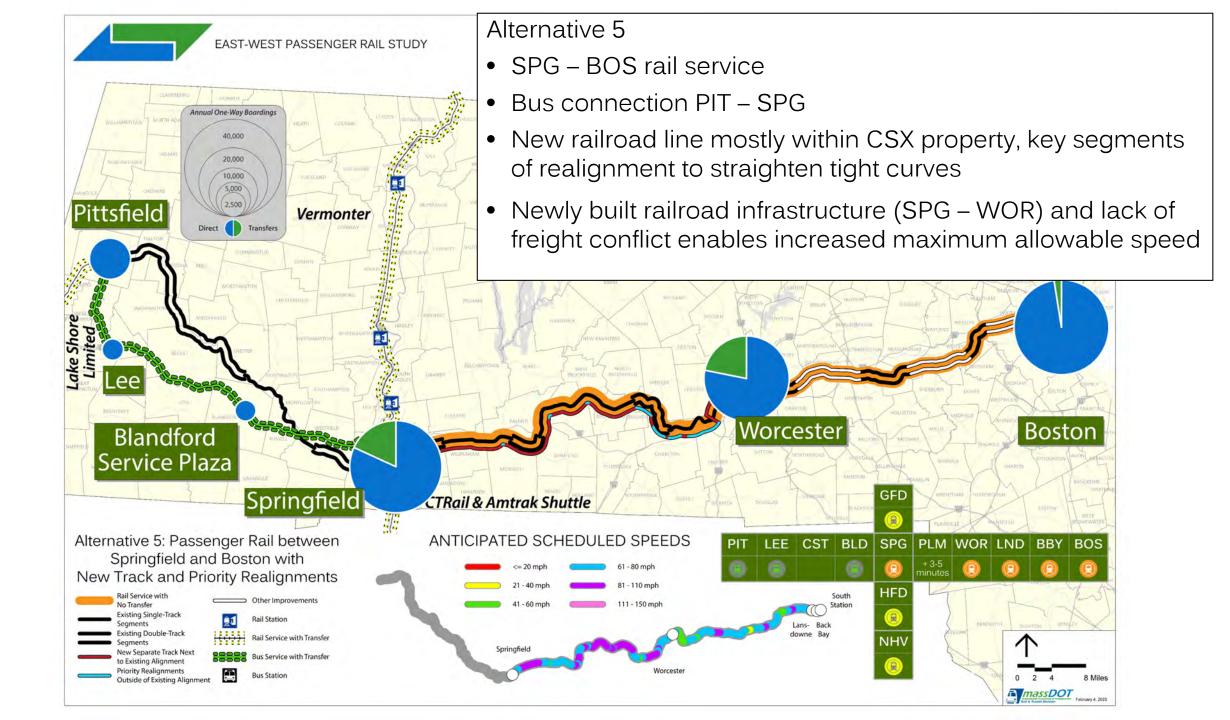

39

* Depending on schedule, travel t	imes may be up to 5	minutes faster or 10	Construction Cost per Annual Trip	\$17,311	

Annual O&M Costs

\$65.7 M

## Alternative 5 – Ridership Patterns

- Same frequency as Alt. 4 with faster travel times
- Priority realignments between SPG – WOR
- No rail service to PIT (bus connection at SPG), PLM, CHS
- Overall ridership of 381 weekday riders is lower than Alt. 4

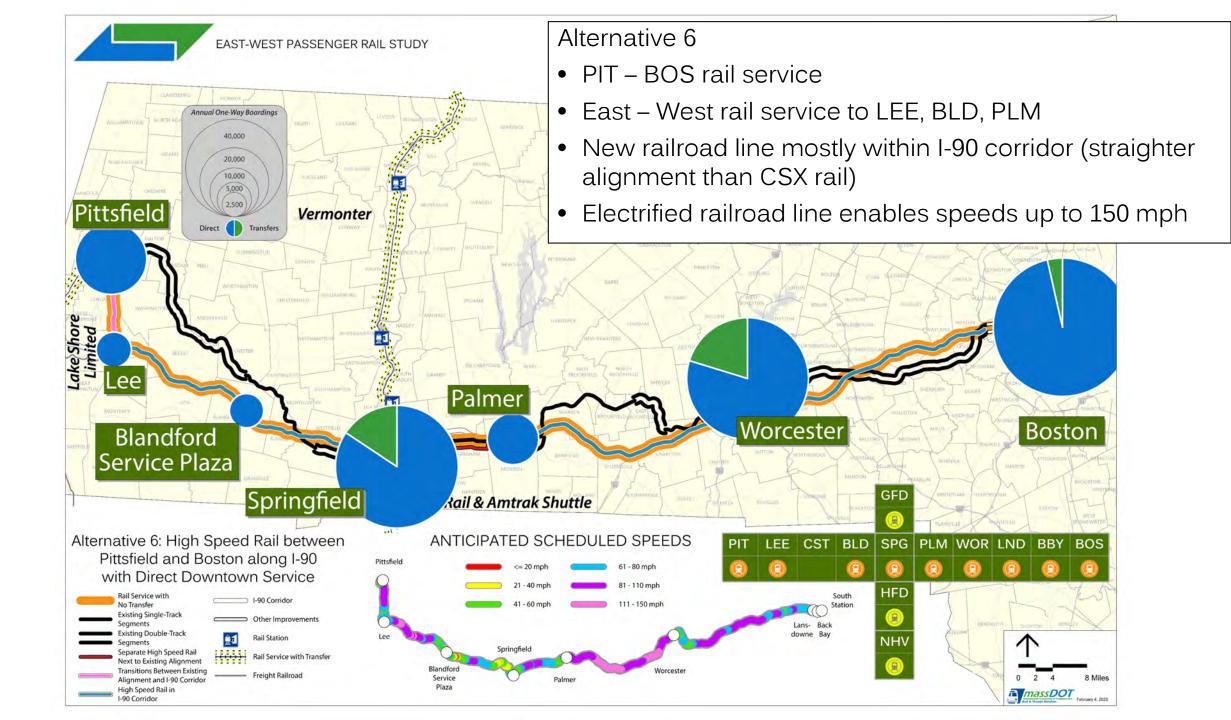

42

Annual O&M Costs

\$49.0 M

## Alternative 6 – Ridership Patterns

- More frequent than Alts 4 & 5
- Lower travel times
  - BOS-WOR: 0:44
  - BOS-SPG: 1:19
  - BOS-PIT: 2:18
- Ridership more than 2x Alts 4 & 5 – 820 weekday riders
- Ridership increases at all stations

Annual Ridership	11,150	48,000	72,250	117,100	115,050	247,700
Construction Cost per Passenger Trip (\$)	\$90,689	\$21,067	\$21,868	\$17,311	\$22,735	\$51,074
10% Induced Demand Riders	1,115	4,800	7,225	11,710	11,505	24,770
Annual Ridership (10% Induced Demand)	12,265	52,800	79,475	128,810	126,555	272,470
Construction Cost per Passenger Trip + 10% (\$)	\$84,918	\$19,726	\$20,476	\$16,209	\$21,288	\$47,824
35% Induced Demand Riders	3,903	16,800	25,288	40,985	40,268	86,695
Annual Ridership (35% Induced Demand)	15,053	64,800	97,538	158,085	155,318	334,395
Construction Cost per Passenger Trip + 35% (\$)	\$71,268	\$16,555	\$17,185	\$13,604	\$17,866	\$40,137

## **Comparison Rail Projects**

• Study Only – 2 Projects

EAST

- Northern New England Intercity Rail Initiative (NNEIRI)
- California High-Speed Rail (CAHSR)
- Construction Complete 4 Projects
  - Downeaster (MA NH ME), Southeast High-Speed Rail (DC – VA – NC – GA), Chicago – St. Louis (IL – MO), Cascades (OR – WA – BC)
  - Funded by High Speed Intercity Passenger Rail (HSIPR) and Transportation Investment Generating Economic Recovery (TIGER) grants
  - Investments made between 2005 and 2015 ridership monitored
  - Corridors with existing robust passenger service and good railroad infrastructure (up to passenger rail standards)
  - Incremental investments and ridership increases

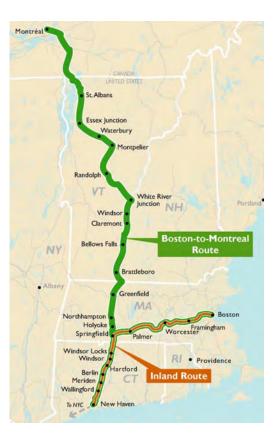

# Comparison Rail Study – NNEIRI

- Northern New England Intercity Rail Initiative (NNEIRI)
- Study of improved rail from to New Haven, Montreal via Springfield
- No improvements west of Springfield
- Lower design standards and level of rail improvements than East West
- Capital cost = \$554-660 million (2016 dollars) for 98 miles
- Forecast = 107,200 annual riders

# Comparison Rail Study – CAHSR

- California High-Speed Rail
  - Initiated through state legislation, supported by state ballot initiative in 2008
  - Speeds ranging from 90/125 mph in developed areas to 220 mph in more rural areas
  - Phase 1 San Francisco Los Angeles/Anaheim (520 miles)
  - Phase 2 Extensions to Sacramento, San Diego (280 miles)
  - Cost estimates

EAST

WES1

- Initial system estimate: \$33.6 B (2008)
- Final estimate for Phase 1: \$79.1 B, year of expenditure (2018)
- Ridership forecasts scaled back
  - Initial forecasts: 65.5 96.5 million annual riders (2008)
  - Final forecast for Phase 1 2040 (mature) ridership: 33.1 million annual riders (2014)
- February 2019, project scaled back to central portion (Bakersfield Merced), continued planning and environmental work on full project

## **Comparison Rail Projects**

- Downeaster
  - Began operations in 2001
  - Infrastructure and service improvements in 2007 (increase in speed and frequency) and 2012 (extension from Portland to Brunswick)
  - HSIPR and TIGER grants of \$121 million helped facilitate 53% increase in ridership (2005 2015)
- Southeast High-Speed Rail
  - Project encompasses infrastructure and service improvements to a range of corridors and services
    - Faster, more frequent service between Washington, DC and Richmond, VA
    - Less frequent regional, feeder and long-distance service south of Richmond
  - Grade crossing safety improvements, new/modernized stations
  - HSIPR and TIGER grants of \$954 million enabled 90% increase in ridership (2005 – 2015)

## **Comparison Rail Projects**

- Chicago St. Louis
  - Infrastructure improvements to enable up to 110 mph operations in several segments of the corridor
  - Upgraded bridges, new/improved rail sidings, grade crossing safety improvements
  - HSIPR and TIGER grants of \$1,582 million helped facilitate 136% increase in ridership (2005 2015)
- Cascades (Pacific Northwest Rail Corridor)
  - Improvements to US segment of Eugene Portland Olympia
    Seattle Vancouver rail line
  - Infrastructure and service improvements to a range of corridors and services
  - Two additional round trips added per day (six total)
  - Significant investment in Seattle King Street Station and Portland Union Station
  - HSIPR grants of \$890 million enabled 21% increase in ridership (2005 – 2015)

### Preliminary Alternatives – Comparison Projects

Project Length & Capital Cost

Project	Alt 3 – BOS-PIT	4 – BOS- PIT, New Track	6 – BOS- PIT, High Speed Rail	Northern New England Intercity Rail (Study Only)	California High- Speed Rail (Phase 1, Study Only)	Downeaster	Southeast Rail (DC – Atlanta)	Chicago – St. Louis Rail	Cascades Corridor
Miles	151	151	144	98	520	145	478	363	470
Capital Cost (\$M)	\$1,579.9	\$2,027.0	\$12,651.0	\$602	\$79,100	\$121	\$954	\$1,582	\$890

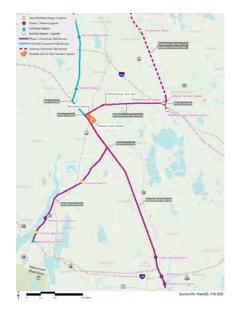

Annual Ridership & Capital Cost per New Rider

Project	Alt 3 – BOS-PIT	4 – BOS- PIT, New Track	6 – BOS- PIT, High Speed Rail	Northern New England Intercity Rail (Study Only)	California High- Speed Rail (Phase 1, Study Only)	Downeaster	Southeast Rail (DC – Atlanta)	Chicago – St. Louis Rail	Cascades Corridor
Baseline	3,900	3,900	3,900	2,300	-	275,000	703,000	244,000	623,000
New Riders	75,575	124,910	268,570	104,900	33,100,000	145,000	636,000	333,000	128,000
Total Riders	79,475	128,810	272,470	107,200	33,100,000	420,000	1,339,000	577,000	751,000
Capital Cost per New Rider	\$20,905	\$16,228	\$47,105	\$5,739	\$2,390	\$834	\$1,500	\$4,751	\$6,953

### South Coast Rail Project

- MBTA Commuter Rail service to Fall River, New Bedford, other South Coast communities
- Phase 1 improvements to enable nearterm service via existing Middleborough/Lakeville line
- Infrastructure improvements
  - Reconstruct tracks, junctions, sidings
  - Build new stations, support facilities, signal and positive train control systems
- Total infrastructure construction cost = \$525 m (2020 dollars)
- Expected to add 3,220 daily riders = 972,440 annual riders

#### Project Length & Capital Cost

Project	Alt 3 – BOS-PIT	4 – BOS-PIT, New Track	6 – BOS- PIT, High Speed Rail	South Coast Rail Phase 1		
Miles	151	151	144	36		
Capital Cost (\$M)	\$1,579.9	\$2,027.0	\$12,651.0	\$525

Total Riders	79,475	128,810	272,470	2,724,040			
Capital Cost per New Rider	\$20,905	<sub>58</sub> \$16,228	\$47,105	\$540			

# Next Steps

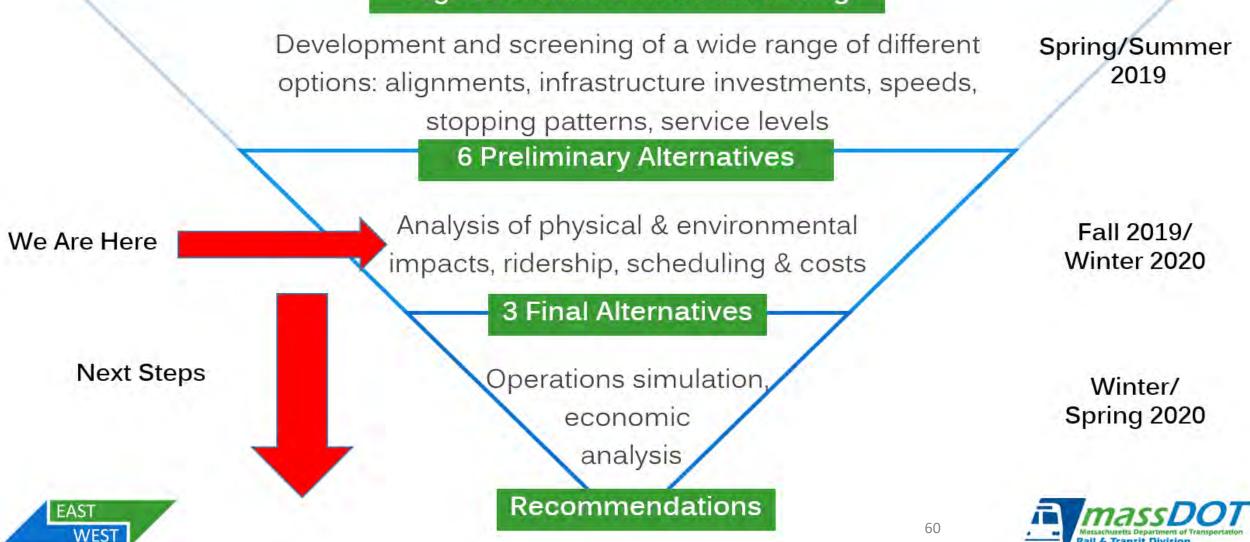

Advisory Committee Meeting #4 to Get Feedback, Answer Questions on Alternatives

Final Alternatives Analysis: Benefits, Impacts, Costs, and Tradeoffs

Advisory Committee Meeting #5, Public Meeting #3

## Alternatives Development & Analysis

#### **High Level Alternatives Screening**

### 3 Final Alternatives – Key Criteria for Short-Listing

#### • Corridor and infrastructure investment

- Shared rail
- Shared corridor, new rail
- New corridor (I-90 corridor)
- Service characteristics
  - Communities served
  - Service frequency
- Travel time
- Ridership projections
- Environmental and community impacts
- Costs and Benefits
  - Capital costs
  - Operating & maintenance costs
  - Benefits travel time, environmental benefits, reduction in crashes

#### • What criteria should we use to narrow down to the final 3?

## Study Schedule

	2018	2018 2019										2020							
	Decembe	January	February	March	April	May	June	July	August	Septembe	October	November	Decembe	January	Feb	uary	March	April	Мау
Task 1: Document Past Efforts																			
Task 2: Current Conditions: Market Analysis																			
Task 3: Physical, Regulatory, ROW Ownership																			
Task 4: Potential Service Plan and Alternatives																			
Task 5: Analysis of 6 Preliminary Alternatives																			
Task 6: Analysis of 3 Final Alternatives																			
Task 7: Development of Recommended Next Steps																		0	C
