

STEVEN MAÇLAUÇHIAN President & CEO

September 19, 2014

Mr. David Sel.z Executive Director Health Policy Commission Two Boylston Street, 6th floor Boston, MA 02111

Via Electronic Mail to HPC-Testimony@state.ma.us

Dear Executive Director Sell2:

Pursuant to your letter dated August 1, 2014, and in accordance with Massachusetts General Laws chapter 6D, § 8, please find included herein Saint Vincent Hospital's responses to the questions outlined in Exhibits B and C. I am legally authorized and empowered to represent Saint Vincent Hospital and provide the enclosed testimony.

Sincerely,

Steven MacLauchlan President & CEO

CC: Stuart Altman, Ph.D.

Chair, Health Policy Commission Two Boylston Street, 6th floor

Boston, MA 02111

Question 1

Chapter 224 of the Acts of 2012 (c. 224) sets a health care cost growth benchmark for the Commonwealth based on the long-term growth in the state's economy. The benchmark for growth between CY2012-CY2013 and CY2013-CY2014 is 3.6%.

- a. What trends has your organization experienced in revenue, utilization, and operating expenses from CY 2010-CY2013 and year-to-date 2014? Please comment on the factors driving these trends.
- b. What actions has your organization undertaken since January 1, 2013 to ensure the Commonwealth will meet the benchmark, and what have been the results of these actions?
- c. What actions does your organization plan to undertake between now and October 1, 2015 (including but not limited to innovative care delivery approaches, use of technology and error reduction) to ensure the Commonwealth will meet the benchmark?
- d. What systematic or policy changes would encourage or enable your organization to operate more efficiently without reducing quality?

Summary: Saint Vincent, as a member of a national healthcare organization, has been fully engaged for several years in delivering high quality, cost-effective, appropriately local care. Saint Vincent's high value proposition provides a model to be utilized in order to provide high quality, cost-effective patient care services with a health care cost growth trend lower than 3.6% within the Central Massachusetts Market.

Answer:

- a. Saint Vincent has seen the following trends in utilization and expense controls in the last 3 years:
- Volume has shifted from IP to OP
 - o IP Discharges have declined on average -1.3% per year
 - o OP Visits have increased on average +1.2% per year
 - Even though patients are being treated for similar diagnosis, treatment plans have become more effective and efficient resulting in shorter lengths of stay
 - The Hospital has acknowledged this trend and implemented clinical decision/observation unit which has benefited the patient with level of care expectations and improved Hospital throughput operations
- Surgical cases have increased, most likely a reflection of greater utilization of tiered networks, and our Tier I status with many payers, as a high value provider

- o Even though overall shift to OP is seen throughout the Hospital, the Operating rooms are appropriately being used for higher acuity Hospital services rather than focusing growth on OP surgery that could be performed in an ambulatory setting
- Gross Revenue has increased on average +2.2% per year
 - This can be used as an indicator of overall volume and intensity growth since St Vincent has not implemented charge increases
- Net Revenue has increased on average +4.9% per year
 - This takes into account volume/mix increase
- Total Operating Expenses have increased on average +3.1% per year

One area that remains a challenge is Medicaid reimbursement, which continues to operate under a fee for service model, and allows members to move in and out of Medicaid MCO plans, making risk stratification difficult. Enrollment plans should lock in similarly to Medicare plans, allowing improved management of a more stable population.

- b. Actions to ensure meeting the benchmark since 2013 that Saint Vincent has been focused on include providing high quality, cost-effective care, through the following ongoing initiatives:
 - LEAN daily management of the hospital in line with Tenet-wide principles of lean and effective healthcare management. Tenet's MA hospitals are a leader in effective LEAN management.
 - Significant internal cost reduction initiatives (including position eliminations and consolidations, consolidation of service lines/locations, work redesign, etc.).
 - Continue participation in risk-based contracts with payers, leading to more effective management of Total Medical Expense (TME).
 - Improving access to primary care physicians
 - Population health management programs
- c. Actions we plan to undertake to ensure continued benchmark success:
 - Continued participation in cost and risk shared contracts
 - LEAN daily management in our facilities
 - National purchasing contracts as part of the Tenet Health organization.
 - Utilization of discharge management approaches and models to manage hospital readmissions
 - Strengthening and expanding our ACO
 - Specialty care partnerships for the most effective patient care in a local setting
- d. We recommend the following policy changes:

- Encourage adequate and flexible behavioral health access with appropriate reimbursement.
- Alternative payment programs, including Medicaid alternative payment programs
- Greater reimbursement rate equity between community-based and academic-based facilities for the same high-quality care.

Question 2

C. 224 requires health plans to reduce the use of fee-for-service payment mechanisms to the maximum extent feasible in order to promote high-quality, efficient care delivery.

- a. How have alternative payment methods (APMs) (payment methods used by a payer to reimburse health care providers that are not solely based on the fee-for service basis, e.g., global budget, limited budget, bundled payment, and other non-fee-for-service models, but not including pay-for-performance incentives accompanying fee-for-service payments) affected your organization's overall quality performance, care delivery practices, referral patterns, and operations?
- b. Attach and discuss any analyses your organization has conducted on the implementation of APMs and resulting effects on your non-clinical operations (e.g., administrative expenses, resources and burdens).
- c. Please include the results of any analyses your organization has conducted on this issue, including both for your patients paid for under APMs and for your overall patient population.

Summary: Saint Vincent has been driving the delivery of cost effective, quality care for the last several years. We support the core elements of Chapter 224 and the desire to reduce healthcare costs in a well thought out and equitable way.

Answer:

- a. Alternative payment methods (APMs) and population health management have been effective in shifting our focus from fee-for-service to an approach with greater emphasis on providing alternative care locations, care in a non-urgent facility, and preventative care. Our participation in ACO and risk-sharing networks has allowed us to provide an improved approach to managing health and controlling costs, with integrated services and programs across the continuum of care.
- b., c. We do not have additional analysis to share.

Question 3

Please comment on the adequacy or insufficiency of health status risk adjustment measures used in establishing risk contracts and other APM contracts with payers.

a. In your organization's experience, do health status risk adjustment measures

sufficiently account for changes in patient population acuity, including in particular sub-populations (e.g., pediatric) or those with behavioral health conditions?

- b. How do the health status risk adjustment measures used by different payers compare?
- c. How does the interaction between risk adjustment measures and other risk contract elements (e.g., risk share, availability of quality or performance-based incentives) affect your organization?

Summary: Health Status Risk Adjustment Measures are an important element in the management of population health, but the risk measures currently utilized are not yet standardized and fully proven. As these measures improve and benefit from multi-year/multi-network management and measurement, they will become more effective tools in determining the risk stratification of patient populations.

Answer:

- a. Time lags in data availability, as well as, movement of patients across healthcare networks/providers lead to less reliable data availability for accurate risk assessment and corresponding risk adjustment measures.
- b. Standardization of risk adjustment measures by different payers would streamline our analysis, removing the extra step currently required to analyze and equalize the varying risk adjustment measures by individual providers. Current risk adjusters are complicated, and algorithms are not shared, so providers are unable to validate their accuracy. Frequently, payers are utilizing risk adjustment algorithms from external vendors (ie Ingenix), and may not be able to share the variables driving the algorithm with providers.
- c. Correlation between risk adjustment measures, quality measures, and participation in available patient programs (i.e. weight management) as well as medication and behavioral compliance, and socioeconomic factors, are all essential elements to effectively manage the health of a patient population. Consistency in risk measures, as well as consistent attribution methodologies, will help streamline the management of patient health and risk management. Better incorporation of socioeconomic variables not reflected in historic claims data is also critical for the most accurate and effective identification of potential patient risk.

Ouestion 4

A theme heard repeatedly at the 2013 Annual Cost Trends Hearing was the need for more timely, reliable, and actionable data and information to facilitate high-value care and performance under APMs. What types of data are or would be most valuable to your

organization in this regard? In your response, please address (i) real time data to manage patient care and (ii) historic data or population-level data that would be helpful for population health management and/or financial modeling.

Summary: Saint Vincent is always striving to align analytical tools, care delivery models, and staff development to provide the best ways to manage the health of our patient population. Quick, accurate and easy to use data is essential for the success of these initiatives.

Answer:

More effective real time data could be further facilitated by:

Reduced turnaround time for preventative care claims: Typically claims are reported 90 days post-claim. If this lag could be reduced we believe the impact for our outreach interventions would be improved, both from a resource use perspective and from a patient satisfaction perspective as well as our ability to impact patient health.

Standard data formats for payer claims: Payer claims data is a critical element for our patient information. Non-standardized data formats require added processing time and effort for data analysis.

Site and Provider level cost and utilization data: Improvement in inpatient outcomes is driven by the work at the site level, coupled with the use of accurate and standardized analytics.

Inclusion of all medical expenses, including Medicare, Medicaid and state-subsidized payments in an easily accessible format.

Question 5

- C. 224 requires health plans to attribute all members to a primary care provider, to the maximum extent feasible.
- a. Which attribution methodologies most accurately account for patients you care for?
- b. What suggestions does your organization have for how best to formulate and implement attribution methodologies, especially those used for payment?

Saint Vincent's attribution methodology:

- a. For commercial payer contracts we utilize Primary Care provider relationship to assign members. For the Medicare Shared Savings ACO we utilize the CMS methodology which is based on a retroactive attribution to the provider providing the majority of care.
- b. Attribution methodologies, while not perfect, are critical to the success of population health management. A shared, common, transparent attribution methodology is critical to the success of more effective population health management in Massachusetts. Even with a more clearly defined attribution model, however, providers will still face the challenge of directing care when the patient's benefit plan (PPO) allows the patient to seek care at any location.

Ouestion 6

Please discuss the level of effort required to report required quality measures to public and private payers, the extent to which quality measures vary across payers, and the resulting impact(s) on your organization.

Summary: While the level of effort is significant to provide quality measures to public and private payers, Saint Vincent is highly focused on measuring and continuously improving the quality of our care. Because of the level of administrative resources required to monitor and report on these metrics, a more standardized measurement of quality reporting across payers would be beneficial.

Answer: Measurement of key quality metrics and indicators has been built into our hospital operational practices. Quality measures are monitored for inpatient and outpatient encounters. For commercial payers, we share key quality metrics with physicians, as well as consolidate metrics into a patient registry. For ACO patients, CPRO quality measures are utilized and shared. The multiple reporting requirements require an investment in administrative and analytic resources to effectively track, monitor and report on the multiple quality metrics. Because there are also multiple quality reporting metrics published for consumers, a lack of standardized quality metrics creates consumer confusion about true measures of quality, in addition to the administrative cost of reporting on non-standardized quality metrics that Saint Vincent's incurs.

The impact of measuring and responding to quality metrics at Saint Vincent has been an increased focus on outcomes in the inpatient setting, and a continued focus on our programs to continually improve outcomes and manage overall cost of care. From an outpatient perspective, measuring and monitoring quality has led to improved management of higher risk population groups (i.e. hypertension, diabetes) leading to an anticipated lower utilization of acute care.

Question 7: AMC Utilization

An issue addressed both at the 2013 Annual Cost Trends Hearing and in the Commission's July 2014 Cost Trends Report Supplement is the Commonwealth's higher than average utilization of inpatient care and its reliance on academic medical centers.

- a. Please attach any analyses you have conducted on inpatient utilization trends and the flow of your patients to AMCs or other higher cost care settings.
- b. Please describe your organization's efforts to address these trends, including, in particular, actions your organization is taking to ensure that patients receive care in lower-cost community settings, to the extent clinically feasible, and the results of these efforts.

Summary: While Saint Vincent not an AMC, it is a tertiary, teaching, community based provider focused on meeting the health needs of members of our community. We provide cost-effective, high quality care at a lower reimbursement rate than AMCs, yet continue to experience an outflow of patients to AMCs for care that could be provided at our facilities, unnecessarily increasing the total medical expense (TME). Additionally, as a for-profit provider, we provide tax income to support the communities in central Massachusetts.

Answer:

- a. Saint Vincent utilizes market share data (Crimson) to evaluate inpatient utilization and market utilization trends.
- b. Saint Vincent conducts an annual community needs assessment to identify the prevalent health needs/health risks in our primary and secondary service areas. Working in close relationship with our physician groups engaged in risk-sharing programs, our focus is on effectively managing population health, including efforts to ensure that patient care is delivered at the appropriate local site wherever possible. Our service offerings reflect the needs of our community, but are often reimbursed at a lower rate than AMCs, putting Saint Vincent at an operational disadvantage long term. The rate disparity between community-based hospitals and AMCs creates a need-based community reinvestment gap, where high community needs, such as management of behavioral health issues, are reimbursed at a lower rate for the community based setting seeing the majority of these patients, creating a gap between Total Medical Expense (cost times utilization rate) and community need-based Reinvestment Funding (Total Reimbursement minus Total Medical Expenses). This gap places a disparate burden on community hospitals to operate exponentially more efficiently, to be able to continue to fund programs to meet the needs of patients in the community. Consolidation, layoffs, program reductions and similar cost-saving measures are not viable long-term solutions for non AMC providers – greater rate equity is required for effective management of community-based health.

Question 8: Post-Acute Care

The Commission found in its July 2014 Cost Trends Report Supplement that the use of post-acute care is higher in Massachusetts than elsewhere in the nation and that the use of post-acute care varies substantially depending upon the discharging hospital.

- a. Please describe and attach any analyses your organization has conducted regarding levels of and variation in the utilization and site of post-acute care, as well as your efforts to ensure that patients are discharged to the most clinically appropriate, high-value setting.
- b. How does your organization ensure optimal use of post-acute care?

Summary: Saint Vincent is focused on effective management of patients at discharge and post discharge, to better manage inpatient readmissions, as well as more effectively manage utilization of post-acute care.

Answer: Programs to manage patients as they are discharged from an inpatient setting include:

- Better care coordination and information sharing with Primary Care physicians
- Discharge and transition coaches to manage post-acute care
- An enhanced care coordination model developed for the ACO organization
- Utilization of home care and hospice to keep patients in an at-home setting post discharge
- Compliance management programs for patients with chronic conditions and frequent inpatient admissions, to reduce the management of acute care incidents.
- For higher-risk populations in our ACO, the assignment of nurse care managers and social workers to assist patients with post-discharge compliance and health management.

Question 9

C. 224 requires providers to provide patients and prospective patients with requested price for admissions, procedures and services. Please describe your organization's progress in this area, including available data regarding the number of individuals that seek this information (using the template below) and identify the top ten admissions, procedures and services about which individuals have requested price information. Additionally, please discuss how patients use this information, any analyses you have conducted to assess the accuracy of estimates provided, and/or any qualitative observations of the value of this increased price transparency for patients.

We receive on average 40 inquiries per month on health care pricing, primarily via phone inquiries.

a. Of these inquiries, 70% are for imaging and 30% for surgical cases. The majority of these requests are insured patients that have contacted their insurance provider and been

advised to contact the facility for average cost. Top ten inquiries on pricing fall into the following categories:

• Imaging: MRI, CT, Bone Density, Nuclear Medicine

• Same day surgeries: arthroscopic & GYN

• In-patients: Deliveries

Pricing inquiries are directed to our financial counselors, who respond to the patient with average procedural costs, as well as additional information they may need.

Question 10

Please describe the manner and extent to which tiered and limited network products affect your organization, including but not limited to any effects on contracting and/or referral practices, and attach any analyses your organization has conducted on this issue. Describe any actions your organization taken (e.g., pricing changes) in response to tier placement and any impacts on volume you have experienced based on tier placement.

Summary: Tiered and limited network products can be an effective vehicle to encourage plan participants to remain in-network for healthcare services. In order to be most effective, plan members must have a greater understanding of the benefits of keeping care within an integrated network of high quality, cost-effective care.

Answer: For Saint Vincent and the surrounding community, as employers shift to tiered and limited network products to better manage healthcare costs for their employees, the impact on innetwork retention is beginning to reflect a greater consumer consideration for the price of healthcare. Driven primarily by the cost of service or copay, this shift is encouraging in terms of the impact of better managing the cost and location of care for services and procedures easily managed in a local setting, as well as better patient health information sharing across a continuum of care. As a high value provider in central Massachusetts, Saint Vincent's attempts to work within a rate band that allows us to stay in Tier I for the majority of limited/tiered network products.

Question 11

The Commission has identified that spending for patients with comorbid behavioral health and chronic medical conditions is 2-2.5 times as high as spending for patients with a chronic medical condition but no behavioral health condition. As reported in the July 2014 Cost Trends Report Supplement, higher spending for patients with behavioral health conditions is concentrated in emergency departments and inpatient care.

- a. Please describe ways that your organization is collaborating with other providers to integrate physical and behavioral health care services and provide care across a continuum to these high-cost, high-risk patients.
- b. Please discuss ways that your organization is addressing the needs of individuals to avoid unnecessary utilization of emergency room departments and psychiatric

inpatient care.

- c. Please discuss successes and challenges your organization has experienced in providing care for these patients, including how to overcome any barriers to integration of services.
- d. There has been increased statewide interest in data reporting across all services, inclusive of behavioral health. Please describe your organization's willingness and ability to report discharge data.

Summary: Collaboration with our primary care network on the management of behavioral health conditions, expanding outpatient behavioral health services, and behavioral health management strategies across both of our Massachusetts hospitals and affiliated physician networks are all elements of our approach to improve the management of patients with comorbid behavioral health issues.

Answer:

Saint Vincent, along with MetroWest, has continued to invest in behavioral health programs, services, and education. We have added 13 additional beds at MetroWest, with further expansion plans under development. Saint Vincent has relocated the behavioral health unit to a main campus, state-of-the-art facility, allowing behavioral health care closer to the ED and closer access to behavioral health care for acute care inpatients, allowing for improved management of comorbidities. Our strategy for behavioral health management extends across our campuses and physician organizations, since this is a statewide issue not confined to a single facility.

As part of our ACO approach to comorbidity management, behavioral health screenings are incorporated into patient care, as well as identification and connection of patients with appropriate behavioral health resources for patients with an identified behavioral health need. Training and support for our primary care network in behavioral health management and resources have also been incorporated into our overall behavioral health management strategy. Continued investment in both inpatient and outpatient behavioral health programs is at the core of our behavioral health management strategy. Education of our residents and primary care physicians in the area of behavioral health management is also an essential element of the strategy, since these providers are often the gateway to behavioral health care.

One of the key challenges we face in behavioral health management is the underpayment of behavioral health by Medicaid and commercial payers. Additionally, due to the lack of appropriate placement options, we incur additional costs associated with the necessary 1:1 staffing in the ED and inpatient units for patients with behavioral health issues who are waiting for placement in appropriate programs or locations.

Ouestion 12

Describe your organization's efforts and experience with implementation of patient centered medical home (PCMH) model.

- a. What percentage of your organization's primary care providers (PCPs) or other providers are in practices that are recognized or accredited as PCMHs by one or more national organizations?
- b. What percentage of your organization's primary care patients receives care from those PCPs or other providers?
- c. Please discuss the results of any analyses your organization has conducted on the impact of PCMH recognition or accreditation, including on outcomes, quality, and costs of care.

Summary: We have utilized Patient-Centered Medical Home principles since 2011 in our employed primary care physician practices. Our ACO organizations also utilize care coordination and interdisciplinary teams to manage the health of our patients.

Answer:

- a. We have been aware of, supportive of, and utilizing the Patient-Centered Medical Home Model since 2011, and are now at a point where many of our primary care physicians will be recertifying for PCMH. Employed primary care physician practices in our ACO participate in our PCMH optimization program currently, while more of our employed physicians have committed to engagement with the PCMH program by the end of 2015.
- b. We do not currently track this data
- c. We do not currently track this data

Question 13: Commentary on cost trends report

After reviewing the Commission's 2013 Cost Trends Report and the July 2014 Supplement to that report, please provide any commentary on the findings presented in light of your organization's experiences.

Summary: We are engaged in and fully support the continued efforts to better manage healthcare costs in Massachusetts. Key areas impacting our operations include:

• The rate equity gap continues to create a higher bar for non AMC providers to provide high quality local care for patients. Saint Vincent is required to operate

- more efficiently to provide the same high quality care at a lower rate of reimbursement.
- We see a significant community need in behavioral health, which continues to be reimbursed poorly, leading to a gap in adequate coverage and programs, and higher overall TME.
- Alternative payment methods will continue to grow we continue to be focused on providing alternative solutions and new approaches.

Answer:

We are pleased with the efforts that resulted in the 2013 Cost Trends Report, and are supportive of the initiative to better manage healthcare costs in Massachusetts. There is still much work to be done in creating an efficient, high-quality health care delivery system. A key step will be greater equity in reimbursement rates across providers. A tiered model of payment/reimbursement does not result in greater efficiency, but instead places a more significant burden on the hospitals in the lower-reimbursed strata to operate more efficiently than those in the higher reimbursed strata.

Consumer engagement in health care spending will continue to drive efficiency, particularly as more consumers/employers participate in tiered or limited network products, and are more aware of health care costs, and their required contribution or copay.

Investment in behavioral health, while necessary to meet the needs of the community, is not reimbursed at a sufficient level to invest in the programs and facilities needed to effectively manage behavioral health resources at Saint Vincent and MetroWest. The lack of adequate treatment options continues to result in behavioral health patients boarding in the ED, or utilizing inpatient care when no appropriate outpatient care is available. We will continue to invest in both inpatient and outpatient behavioral health programs in Massachusetts. Our observation is that of the Top 20 episodes by contribution to growth, 6 are behavioral health related. Better management/coordination of care with appropriate reimbursement can significantly contribute to lowering the growth curve increase. The Behavioral Health concentration of care in ED is directly related to an underinvestment in behavioral health programs due to poor reimbursement. Because our mission is to provide for the overall health of our communities, we continue to invest in behavioral health despite the gap in reimbursement. This places an unequal burden on community hospitals, where many of these patients are frequently seen.

In terms of Massachusetts' high ranking for spending on children, our observation as part of a national organization is that higher spending on children in Massachusetts may be reflective of the fact the MA is ahead of the curve in state mandated coverage for children. Other states, such as Illinois and Pennsylvania have only recently put such mandates in place, and they are not yet fully implemented.

We see the following areas as drivers of improved management of Total Medical Expense (TME):

- Investment in behavioral health facilities and programs (inpatient and outpatient) which ultimately decreases ED boarding and associated costs.
- Better management of data relating to behavioral health as a comorbid condition
- Change in reimbursement to encourage greater investment in community health needs and drivers of better health outcomes
- Commercial rate adjustment, as well as Medicare/Medicaid
- Investment in ASCs and other Ambulatory care options to reduce inpatient cost.
- Continue to provide access to primary care, particularly in lower-income communities

As we plan for 2015, Saint Vincent, by providing high quality, cost-effective local care is focused on stemming the outmigration of care to higher cost facilities and will continue to focus on being the high value care provider in Worcester. We will continue to utilize APMs to manage total medical expense, and will expand on programs initiated over the last several years to manage population health. The volume shift we have seen from IP to OP, combined with the heavy risk environment we operate under, which promotes a lower utilization of acute services, make rate parity, particularly for inpatient services, critical for our continued well-being as a community healthcare provider.

Exhibit C, Question 3: Risk Stratification Response

Our approach for risk stratification is to quantify, analyze and project our ability to manage risk for risk-based contracts. We utilize the following steps in our assessment of population risk:

- I. Examination of historical claims data
- II. Utilize data from payers on risk stratification of patient population
- III. Estimate anticipated risk levels and variables
- IV. Project anticipated costs and TME for the population
- V. Budget for the patient population based on anticipated risk levels and TME

Exhibit C, Question 4

Saint Vincent tracks physician referral volume for both inpatient and outpatient procedures based on claims and procedural data. Monthly volume reports are utilized to project anticipated demand, which drives volume planning and resource allocation.

Saint Vincent Hospital GAO Net Revenue and Margin Calendar Year 2010, 2011, 2012, 2013

Souce: Avega Decision Support System
Revenue = Net Patient Service Revenue
Margin = Net Revenue less Total Direct Costs

Includes All Inpatient and Outpatient Encounters

Net Revenue is based on actual reimbursement from patient accounting or an estimate based on payer contracts Net Revenue does not include journal entries, one-time lump sum adjustments or prior year reimbursement Total Direct Costs per Avega include Salaries, Wages and Benefits, Supplies, Drugs, Implants and Other Expenses

Medicare, Medicaid, Managed Medicare and Managed Medicaid products were mapped to "Government"
