

## Massachusetts Freshwater Beaches [2018]: Water quality data for public and semi-public beaches

The table below summarizes testing and posting information for each freshwater beach in Massachusetts. Under the state regulations, freshwater beaches must test for either *E. coli* or Enterococci. Most beaches do not have to post after each exceedance, provided that (1) they take an immediate resample and (2) that resample does not exceed the standard. Thus, a beach may have an exceedance but no days posted. Conversely, a beach may have days posted, but no exceedances, if it was posted for a reason other than a bacterial exceedance (e.g. rainfall, a cyanobacterial harmful algae bloom, or another hazard such as limited visibility due to poor water clarity).

Community	Beach Name	Testing Frequency	Tests	Indicator	Single Sample Exceedances	Minimum Exceedance (cfu/100mL)	Maximum Exceedance (cfu/100mL)	Days Posted
Abington	Island Grove Beach	Weekly	12	E. coli	3	236	312	3
