

Massachusetts Vehicle Telematics System Notice

This vehicle includes a “telematics system” as defined under Massachusetts General Laws, chapter 93K. Under Massachusetts law, you have a right to access information from this system to diagnose, maintain, and repair your vehicle.

A vehicle’s telematics system collects information generated by operating the vehicle and wirelessly transmits that information to another device where the information is stored. The law refers to this information as “telematics system data.”

If your vehicle is model year 2022 or later and utilizes a telematics system, the law gives you the right to directly access, through a mobile application, all mechanical data emanating from the vehicle. The law also gives you the right to hire an independent repair shop or class 1 dealer licensed pursuant to section 58 of chapter 140 to directly access such mechanical data for the limited purposes of vehicle diagnostics, maintenance, and repair.

“Mechanical data” refers to vehicle-specific data, including telematics system data, generated, stored in, or transmitted by a motor vehicle that is used for or otherwise related to the diagnosis, repair, or maintenance of the vehicle. The type of mechanical data available through telematics will vary depending on the vehicle, but can come from sensors on many vehicle parts, such as the airbags, battery, engine and/or motor, transmission, brakes, or tires.

Certification of Notice

Prospective Owner 1

I hereby certify that I have been provided with and read the Telematics System Notice on this _____ day of _____, _____.
