Dear members of the board,
I know that you probably have received much knowledgeable and erudite information on proper siting of solar. I will not repeat those. My concerns are not with the most efficient way to make money, which is the bottom line of for profit companies. I hope that is not your top concern either. I would like to use up the roof tops, brown fields, parking lots and not cut down forests and destroy agricultural lands. We need to share the land with nature—plants and animal—they support us as we support them. The math that we do has so many factors that it is not simple at all, and yes, there are values at play. Even as we don't have a carbon price, which represents the true cost of carbon in our environment, I hope you will add that to your calculations.

So please be wise, because some actions have consequences that are irreparable. Please consider the services that forests and trees provide! And, please be honest that we really need to conserve energy. We do not have unlimited resources!

Thank you for listening,
Kit Sang Boos
