**CN 625.0**

## **Watershed Planning Program**

The mission of the Watershed Planning Program (WPP) in the Massachusetts Department of Environmental Protection is to protect, enhance, and restore the quality and value of the waters of the Commonwealth. Guided by the federal Clean Water Act, WPP implements this mission statewide through five Sections that each have a different technical focus: (1) Surface Water Quality Standards; (2) Surface Water Quality Monitoring; (3) Data Management and Water Quality Assessment; (4) Total Maximum Daily Load; and (5) Nonpoint Source Management. Together with other MassDEP programs and state environmental agencies, WPP shares in the duty and responsibility to secure the environmental, recreational, and public health benefits of clean water for all people of the Commonwealth.

## **Acknowledgements**

The 2024/2026 Integrated Report (IR) could not have been produced without the dedicated efforts of program staff and input from other Executive Office of Energy and Environmental Affairs (EEA) staff, EPA colleagues, and stakeholder groups. Many thanks to WPP staff who worked directly on the assessments and supporting tasks (e.g., GIS support, data reviews, data analyses, ATTAINS and reports), including Mason Saleeba, Jenny Peet, Jenny Sheppard, Kari Winfield, Stephanie Figary, Bob Smith, Tim Gardner, Anna Mayor, Shervon De Leon, Matt Reardon, Richard Chase, and Richard Carey. Many thanks to WPP field sampling crews, WPP interns, laboratory staff at the Wall Experiment Station, and external data providers who all played important roles in generating the water quality data used to inform decisions.

## **Disclaimer**

References to trade names, commercial products, manufacturers, or distributors in this report constituted neither endorsement nor recommendation by MassDEP.

## Overview of Appendix Contents

This Integrated Report (IR) Appendix functions as a watershed-based Assessment and Listing Decision Summary that catalogs the most recent assessment decisions for each assessment unit (AU) that was updated as part of the 2024/2026 IR cycle.

The appendix begins with 2024/26 Cycle Impairment Changes, a comprehensive table summarizing all impairments that were either added, removed, changed, or unchanged between the 2022 and 2024/2026 reporting cycles. This table presents the overall impairment status at the waterbody scale, across all designated uses. The table does not detail use-specific impairment changes; those details are provided in subsequent sections of the appendix.

Following 2024/26 Cycle Impairment Changes, the appendix provides an individual section for each AU updated during the 2024/2026 cycle. Each AU section details the supporting data and rationale for each designated use attainment determination, including any associated impairment removal decisions. Changes in impairment status at the designated use level are documented in full within the corresponding Designated Use Attainment Decision. AUs where no usable data were available for the 2024/2026 IR cycle are included, but with the assessment information from the 2022 cycle is carried forward.

The following abbreviations are used when referencing designated uses:

- ALU - Aquatic Life Use
- FC - Fish Consumption Use
- SH - Shellfish Harvesting Use
- AES - Aesthetic Use
- PCR - Primary Contact Recreation Use
- SCR - Secondary Contact Recreation Use

When listing an impairment, parentheses and an asterisk (\*) are utilized to denote “pollution” or non-pollutant impairments that do not require the development of a Total Maximum Daily Load (TMDL). Where applicable, further explanation of the ATTAINS impairment code is provided within square brackets [].

## Designated Use Attainment Decisions

### Fish Consumption

2024/26 Use Attainment	Alert
Not Assessed	NO

2024/26 Use Attainment Summary
Fish toxics sampling has not been conducted recently, so the Fish Consumption Use for Beaver Brook (MA73-19) is Not Assessed.

### Aesthetic

2024/26 Use Attainment	Alert
Not Assessed	NO

2024/26 Use Attainment Summary
No data are available, so the Aesthetics Use for Beaver Brook (MA73-19) is Not Assessed.

### Primary Contact Recreation

2024/26 Use Attainment	Alert
Not Supporting	NO

2024/26 Use Attainment Summary
The Primary Contact Recreation Use for Beaver Brook (MA73-19) is assessed as Not Supporting based on bacteria data collected at 1 station in 2018-2022, with an Escherichia Coli (E. Coli) impairment being added. Neponset River Watershed Association (NepRWA) staff/volunteers collected <i>E. coli</i> bacteria samples three-quarters of the way down Beaver Brook at NepRWA_BEB025 [Beaver Brook at Maskwonicut] from 2011-2014 and 2017-2022 (n=5-6/yr). Analysis of the recent five years of the multi-year limited frequency dataset from this station indicated 5 out of 5 sufficient data yrs had intervals where >20% of the GMs were >126 CFU/100ml (2018-2022, 75-100%), 1 yr had ≥2 samples exceed the 410 CFU/100ml STV (2018, n=2), and cumulatively across years 84% of intervals had GMs >126 CFU/100ml, which is indicative of an <i>E. coli</i> impairment.

## Secondary Contact Recreation

<b>2024/26 Use Attainment</b>	<b>Alert</b>
Not Supporting	NO

**2024/26 Use Attainment Summary**

The Secondary Contact Recreation Use for Beaver Brook (MA73-19) is assessed as Not Supporting based on bacteria data collected at 1 station in 2018-2022, with an Escherichia Coli (E. Coli) impairment being added. MassDEP and Neponset River Watershed Association (NepRWA) staff/volunteers collected *E. coli* bacteria samples in both the historic (1997-2010) & the current IR window (2011-2022) in Beaver Brook from 2008-2022 at 2 stations. Samples were collected from the following stations/sample years from upstream to downstream: halfway down the brook at W0557 [Upland Rd, Sharon] from Apr-Sep 2009 (historic n=6) and three-quarters of the way down the brook at NepRWA\_BEB025 [Beaver Brook at Maskwonicut] from 2008-2010 (historic n=6/yr) as well as 2011-2014 and 2017-2022 (current n=5-6/yr). Since bacteria data from the historic IR window are all indicative of good water quality conditions, only the analysis from the current IR window will be summarized here. Analysis of the recent five years of the multi-year limited frequency *E. coli* dataset from NepRWA\_BEB025 indicated 4 out of 5 sufficient data yrs had intervals where >20% of the GMs were >244 CFU/100ml (2018-2019 and 2021-2022, 50-75%), 1 yr had ≥2 samples exceed the 794 CFU/100ml STV (2018, n=2), and cumulatively across years 52% of intervals had GMs >244 CFU/100ml, which is indicative of an Escherichia Coli (E. Coli) impairment.

2024/26 Use Attainment Summary
No data are available, so the Aesthetics Use for Beaver Meadow Brook (MA73-20) is Not Assessed.

### Primary Contact Recreation

2024/26 Use Attainment	Alert
Not Supporting	NO

2024/26 Use Attainment Summary
The Primary Contact Recreation Use for Beaver Meadow Brook (MA73-20) continues to be assessed as Not Supporting based on bacteria data collected at 1 station in 2018-2022, with the prior Escherichia Coli ( <i>E. coli</i> ) impairment being carried forward. Neponset River Watershed Association (NepRWA) staff/volunteers collected <i>E. coli</i> bacteria samples over three-quarters of the way down Beaver Meadow Brook at NepRWA_BMB026 [Beaver Meadow Brook at Pine St] from 2011-2014 and 2017-2022 (n=4-6/yr). Analysis of the recent five years of the multi-year limited frequency dataset from this station indicated 5 out of 5 sufficient data yrs had intervals where >20% of the GMs were >126 CFU/100ml (2018-2022, 75-100%), 3 yrs had ≥2 samples exceed the 410 CFU/100ml STV (2018 and 2021-2022, n=2-4) and cumulatively across years 94% of intervals had GMs >126 CFU/100ml, which is indicative of an <i>E. coli</i> impairment.

**Secondary Contact Recreation**

<b>2024/26 Use Attainment</b>	<b>Alert</b>
Not Supporting	NO

**2024/26 Use Attainment Summary**

The Secondary Contact Recreation Use for Beaver Meadow Brook (MA73-20) is assessed as Not Supporting, with an Escherichia Coli (E. Coli) impairment being added, based on bacteria data collected at 1 station in 2018-2022. MassDEP and NepRWA staff/volunteers collected E. coli bacteria samples in both the historic (1997-2010) & the current IR window (2011-2022) in Beaver Meadow Brook (MA73-20) from 2008-2022 at 2 stations. Samples were collected from the following stations/sample years from upstream to downstream: halfway down the brook at W1945 [Boston Drive, Canton] from Apr-Sep 2009 (historic n=6) and over three-quarters of the way down at NepRWA\_BMB026 [Beaver Meadow Brook at Pine St] from 2008-2010 (historic n=5-6/yr) and 2011-2014 and 2017-2022 (current n=4-6/yr). Analysis of the recent five years of this multi-year limited frequency E. coli dataset from NepRWA\_BMB026 indicated 4 out of 5 sufficient data yrs had intervals where >20% of the GMs were >244 CFU/100ml (2018-2019 and 2021-2022, 50-100%), 1 yr had ≥2 samples exceed the 794 CFU/100ml STV (2022, n=2), and cumulatively across years 55% of intervals had GMs >244 CFU/100ml, which is indicative of an Escherichia Coli (E. Coli) impairment. It should be noted that data in the historic IR window at station W1945 was also indicative of an Escherichia Coli (E. Coli) impairment, with 83% of the GM intervals >244 CFU/100ml for this single year low frequency dataset.

## Designated Use Attainment Decisions

### Fish Consumption

<b>2024/26 Use Attainment</b>	<b>Alert</b>
Not Assessed	NO

<b>2024/26 Use Attainment Summary</b>
---------------------------------------

Fish toxics sampling has not been conducted recently, so the Fish Consumption Use for Billings Street/East Street Pond (MA73065) is Not Assessed.

## Aesthetic

2024/26 Use Attainment	Alert
Not Supporting	NO

### 2024/26 Use Attainment Summary

The Aesthetics Use for Billings Street/East Street Pond (MA73065) continues to be assessed as Not Supporting. Since the Non-Native Aquatic Plants impairment was redundantly duplicated across multiple uses for this waterbody, the Non-Native Aquatic Plants impairment is being removed from the Aesthetics Use but will continue to be maintained under the Aquatic Life Use. Since MassDEP staff noted “100% of the pond surface to be dense with aquatic plants” during a summer 1994 synoptic survey (MassDEP 1994) and Google Earth images from June 2015 and June 2019 (Google Earth Pro Undated) show this pond is very filled in (>25% coverage) with submergent and emergent vegetation, an Aquatic Plants (Macrophytes) non-pollutant impairment is being added in the place of the Non-Native Aquatic Plants impairment at this time. No new data are available to evaluate the Aesthetics Use for Billings Street/East Street Pond.

### *Aesthetic Observations*

**Billings Street/East Street Pond (MA73065) Google Earth Imagery: Pond Outline (2008) Followed by Imagery from 2015 and 2019 Showing Dense/Very Dense Vegetation Covering >25% of the Pond’s Surface** (Google Earth Pro Undated)

### Primary Contact Recreation

<b>2024/26 Use Attainment</b>	<b>Alert</b>
Not Supporting	NO

<b>2024/26 Use Attainment Summary</b>
No bacteria or other indicator data for Billings Street/East Street Pond (MA73065) are available, so the Primary Contact Recreation Use continues to be assessed as Not Supporting. An Aquatic Plants (Macrophytes) impairment is being added (from the Aesthetics Use). Since the Non-Native Aquatic Plants impairment is being removed from the Aesthetics Use this cycle, this impairment is also being removed from the Primary Contact Recreation Use.

### Secondary Contact Recreation

<b>2024/26 Use Attainment</b>	<b>Alert</b>
Not Supporting	NO

<b>2024/26 Use Attainment Summary</b>
---------------------------------------

No bacteria or other indicator data for Billings Street/East Street Pond (MA73065) are available in the current IR window (2011-2022), so the Secondary Contact Recreation Use continues to be assessed as Not Supporting. An Aquatic Plants (Macrophytes) impairment is being added (from the Aesthetics Use). Since the Non-Native Aquatic Plants impairment is being removed from the Aesthetics Use this cycle, this impairment is also being removed from the Secondary Contact Recreation Use.

## Blue Hills Reservoir (MA73004)

<b>Location:</b>	Quincy.

## Designated Use Attainment Decisions

### Fish Consumption

2024/26 Use Attainment	Alert
Not Assessed	No

2024/26 Use Attainment Summary
Fish toxics sampling has not been conducted recently, so the Fish Consumption Use for Bubbling Brook (MA73-11) is Not Assessed.

### Aesthetic

2024/26 Use Attainment	Alert
Not Assessed	NO

2024/26 Use Attainment Summary
No data are available, so the Aesthetics Use for Bubbling Brook (MA73-11) is Not Assessed.

### Primary Contact Recreation

2024/26 Use Attainment	Alert
Not Assessed	NO

2024/26 Use Attainment Summary
No bacteria or other indicator data for Bubbling Brook (MA73-11) are available, so the Primary Contact Recreation Use is Not Assessed.

### Secondary Contact Recreation

2024/26 Use Attainment	Alert
Not Assessed	NO

2024/26 Use Attainment Summary
No bacteria or other indicator data for Bubbling Brook (MA73-11) are available in the current IR window (2011-2022), so the Secondary Contact Recreation Use is Not Assessed. MassDEP staff collected <i>E. coli</i> bacteria samples halfway down Bubbling Brook at W1940 [Trailside Drive, Walpole] from Apr-Sep 2009 (historic n=5). Analysis of this historic single year limited frequency dataset indicated 0% of intervals had GMs >244 CFU/100ml, no samples exceeded the 794 CFU/100ml STV, and the overall GM was 87 CFU/100ml. Historic <i>E. coli</i> data from W1940 meet 2024 CALM guidance, however since these data were collected prior to the current IR window (2011-2022) the Secondary Contact Recreation Use cannot be positively assessed using bacteria data.

## Designated Use Attainment Decisions

### Fish Consumption

2024/26 Use Attainment	Alert
Not Assessed	NO

2024/26 Use Attainment Summary
Fish toxics sampling has not been conducted recently, so the Fish Consumption Use for Cobbs Pond (MA73009) is Not Assessed.

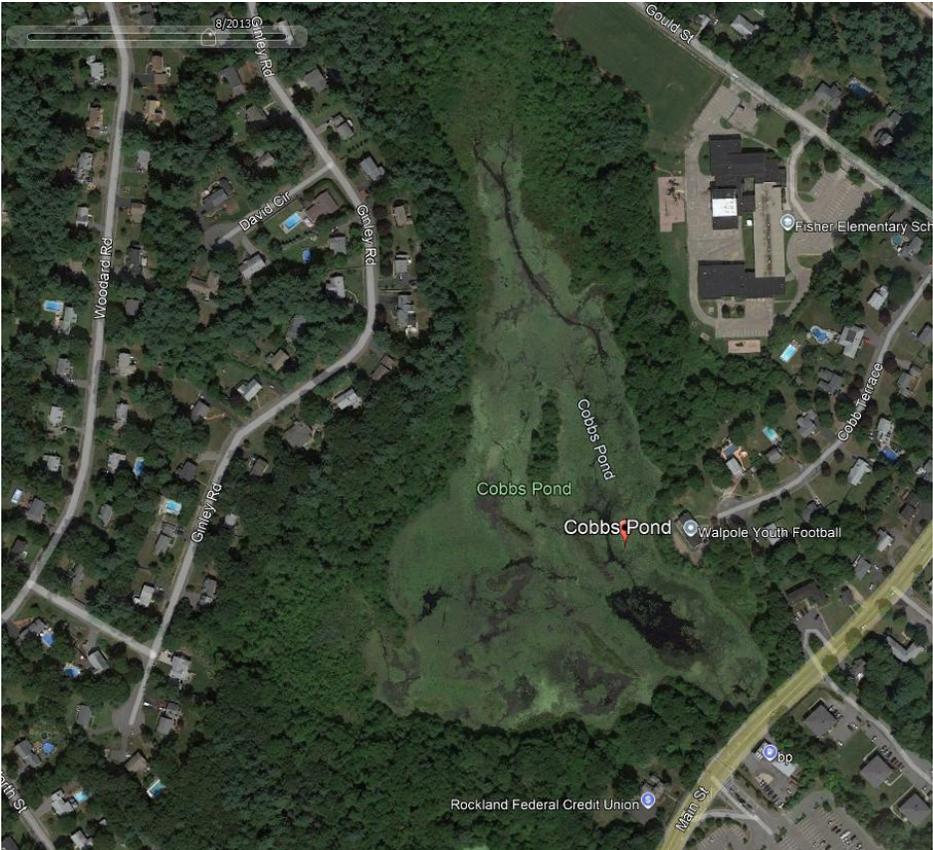

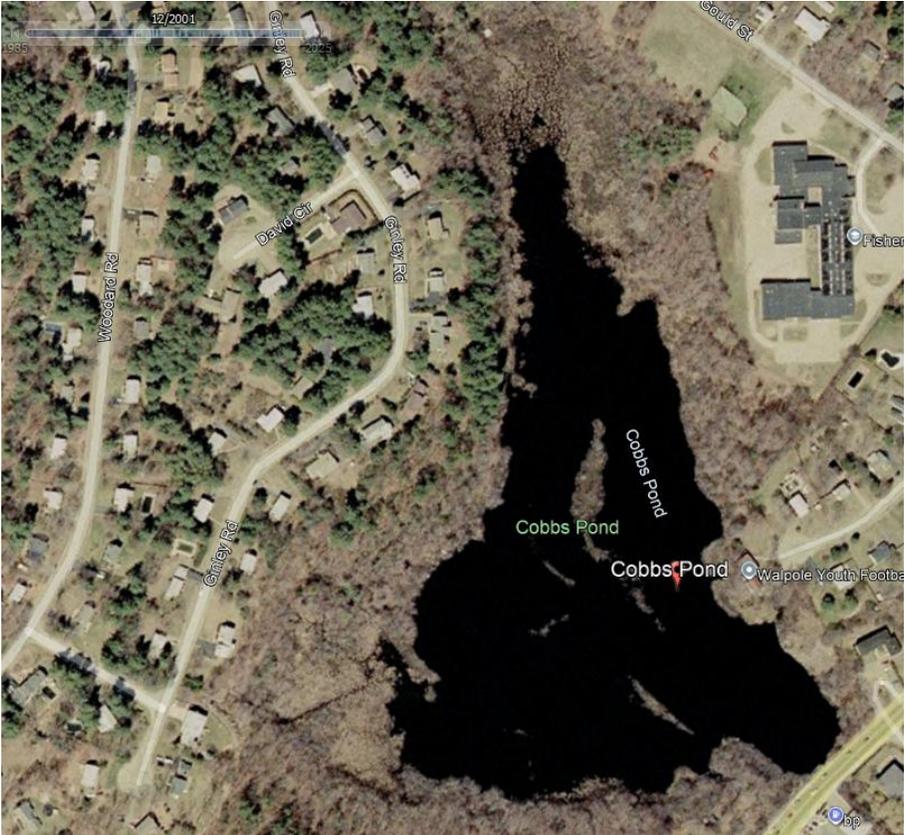

### Aesthetic

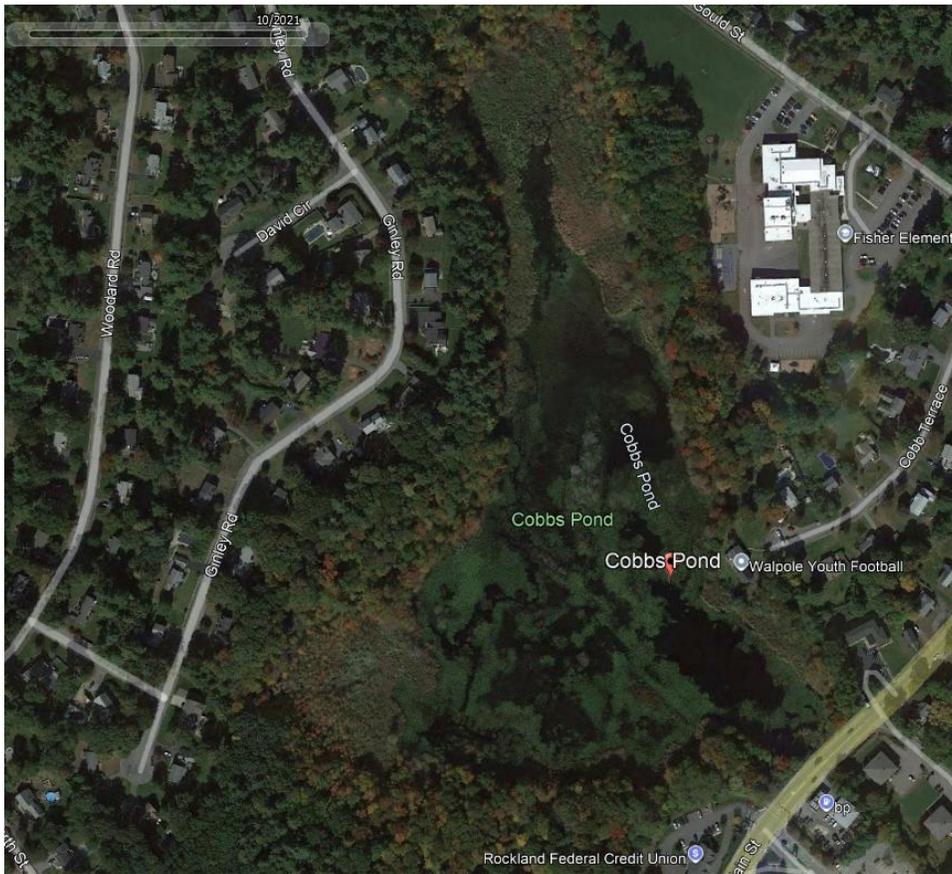

2024/26 Use Attainment	Alert
Not Supporting	NO

2024/26 Use Attainment Summary
The Aesthetics Use for Cobbs Pond (MA73009) continues to be assessed as as Not Supporting with the Nutrient/Eutrophication Biological Indicators impairment being carried forward. Since the Transparency/Clarity impairment was redundantly duplicated across multiple uses for this waterbody, the Transparency/Clarity impairment is being removed from the Aesthetics Use but will continue to be maintained under the Primary Contact Recreation Use. Since the Non-Native Aquatic Plants impairment was redundantly duplicated across multiple uses for this waterbody, the Non-Native Aquatic Plants impairment is being removed from the Aesthetics Use but will continue to be maintained under the Aquatic Life Use. MassDEP staff noted very dense growths of aquatic plants covering most of the pond during a June 1994 synoptic survey (MassDEP 1994), and Google Earth images from the summer months of 2003 through 2022 (Google Earth Pro Undated) show this pond is very filled in with submergent and emergent vegetation (>25% coverage). Consequently, an Aquatic Plants (Macrophytes) non-pollutant impairment is being added in the place of the Non-Native Aquatic Plants impairment at this time. No new data are available to evaluate the Aesthetics Use for Cobbs Pond.

### *Aesthetic Observations*

**Cobbs Pond (MA73009) Google Earth Imagery: Pond Outline (2001) Followed by Imagery from 2013 and 2021 Showing Dense/Very Dense Vegetation Covering >25% of the Pond's Surface** (Google Earth Pro Undated)

### Primary Contact Recreation

2024/26 Use Attainment	Alert
Not Supporting	NO

2024/26 Use Attainment Summary
No bacteria or other indicator data for Cobbs Pond (MA73009) are available, so the Primary Contact Recreation Use continues to be assessed as Not Supporting. The prior Transparency / Clarity impairment is being carried forward and the prior Nutrient/Eutrophication Biological Indicators impairment (from the Aesthetics Use) is being carried forward. An Aquatic Plants (Macrophytes) impairment is being added (from the Aesthetics Use). Since the Non-Native Aquatic Plants impairment is being removed from the Aesthetics Use this cycle, this impairment is also being removed from the Primary Contact Recreation Use.

### Secondary Contact Recreation

2024/26 Use Attainment	Alert
Not Supporting	NO

2024/26 Use Attainment Summary

No bacteria or other indicator data for Cobbs Pond (MA73009) are available in the current IR window (2011-2022), so the Secondary Contact Recreation Use continues to be assessed as Not Supporting. The prior Nutrient/Eutrophication Biological Indicators impairment (from the Aesthetics Use) is being carried forward. An Aquatic Plants (Macrophytes) impairment is being added (from the Aesthetics Use). Since the Non-Native Aquatic Plants and Transparency / Clarity impairments are being removed from the Aesthetics Use this cycle, these impairments are also being removed from the Secondary Contact Recreation Use.

## Designated Use Attainment Decisions

### Fish Consumption

<b>2024/26 Use Attainment</b>	<b>Alert</b>
Not Supporting	No

<b>2024/26 Use Attainment Summary</b>
---------------------------------------

The Fish Consumption Use for East Branch (MA73-05) continues to be assessed as Not Supporting and the prior DDT in Fish Tissue and PCBs in Fish Tissue impairment is being carried forward. MDPH included a site-specific advisory for East Branch (referred to by MDPH as "Canton River (between the Neponset River and Neponset Street dam)") in their January 2025 Freshwater Fish Consumption Advisory List. The public should refer to the most recent MDPH Freshwater Fish Consumption Advisory List for the most up to date meal advice for sensitive and general populations.

## Aesthetic

2024/26 Use Attainment	Alert
Insufficient Information	NO

### 2024/26 Use Attainment Summary

There is insufficient information to assess the Aesthetics Use for East Branch (MA73-05). MassDEP staff recorded a limited number of aesthetics observations at three stations in Canton on the East Branch, during the summer of 2017 as part of the MassDEP Bacteria Source Tracking Project (BST). These stations are described from upstream to downstream as follows: close to the upstream end of the AU at Revere Court (W2735, n=2), a third of the way down the AU upstream/east of Neponset Street (W0555, n=2) and halfway down the AU on the northern braid, southeast from the southern end of Riverview Road (W2736, n=2). There were generally no noted objectionable conditions (odors, deposits, growths, or turbidity) recorded by field sampling crews at any of the stations, though field staff noted high turbidity at one occasion at W0555.

## Monitoring Stations

Station Code	Organization	Type	Water Body	Station Description	Latitude	Longitude
W0555	MassDEP	Water Quality	East Branch	[upstream/east of Neponset Street, Canton]	42.158702	-71.154456
W2735	MassDEP	Water Quality	East Branch	[Revere Court, Canton]	42.154503	-71.146950
W2736	MassDEP	Water Quality	East Branch	[on the northern braid, southeast from the southern end of Riverview Road, Canton]	42.157862	-71.159791

## Aesthetic Observations

### Aesthetics Summary Statements for MassDEP Stations (2011-2020) (MassDEP Undated 6)

[Note: scums of natural origins (e.g. pollen blankets or natural foams) are excluded.]

Station Code	Data Year	Field Sheet Count	Aesthetics Summary Statement
W0555	2017	2	Aesthetic observations were made by MassDEP field sampling crews at Station W0555 on East Branch (MA73-05) during 2 site visits between Jul 2017 and Sep 2017. There were generally no persistent objectionable conditions (odors, deposits, growths, or turbidity) recorded, though field staff noted high turbidity (n=1). However, aesthetic observations are limited (n<3).
W2735	2017	2	Aesthetic observations were made by MassDEP field sampling crews at Station W2735 on East Branch (MA73-05) during 2 site visits between Jul 2017 and Sep 2017. There were generally no persistent objectionable conditions (odors, deposits, growths, or turbidity) recorded. However, aesthetic observations are limited (n<3).
W2736	2017	2	Aesthetic observations were made by MassDEP field sampling crews at Station W2736 on East Branch (MA73-05) during 2 site visits between Jul 2017 and Sep 2017. There were generally no persistent objectionable conditions (odors, deposits, growths, or turbidity) recorded. However, aesthetic observations are limited (n<3).

### Primary Contact Recreation

<b>2024/26 Use Attainment</b>	<b>Alert</b>
Not Supporting	NO
<b>2024/26 Use Attainment Summary</b>	

The Primary Contact Recreation Use for East Branch (MA73-05) continues to be assessed as Not Supporting. The prior Escherichia Coli (E. Coli) impairment is being carried forward based on bacteria data not meeting the threshold at 1 station in 2018-2022. The prior Fecal Coliform impairment is also being carried forward. MassDEP and Neponset River Watershed Association (NepRWA) staff/volunteers collected *E. coli* bacteria samples in East Branch from 2011-2022 at 3 stations/combined stations. Samples were collected from the following stations/sample years from upstream to downstream: the upstream end of the AU at W2735 [Revere Court, Canton] from Jul-Sep 2017 (n=2), a third of the way downstream at combined station W0555 & NepRWA\_EAB010 [upstream/E of Neponset St, Canton & E Branch at Neponset St] from 2011-2014 and 2017-2022 (n=6-8/yr), and halfway down the AU at W2736 [on the northern braid, SE from the southern end of Riverview Rd, Canton] from Jul-Sep 2017 (n=2). The available *E. coli* data at W2735 are too limited to assess the Primary Contact Recreation Use according to the 2024 CALM. Analysis of the recent five years of the multi-year limited frequency *E. coli* dataset from combined station W0555 & NepRWA\_EAB010 indicated 5 out of 5 sufficient data yrs had intervals where >20% of the GMs were >126 CFU/100ml (2018-2022, 25-100%), 2 yrs had ≥2 samples exceed the 410 CFU/100ml STV (2018 and 2022, n=2 & 2) and cumulatively across years 70% of intervals had GMs >126 CFU/100ml, which is indicative of an *E. coli* impairment. The available *E. coli* data at W2736 are too limited to assess the Primary Contact Recreation Use according to the 2024 CALM, although it should be noted that 1 sample exceeded the 410 CFU/100ml STV in 2017 (613 CFU/100ml).

### Monitoring Stations

**Secondary Contact Recreation**

<b>2024/26 Use Attainment</b>	<b>Alert</b>
Not Supporting	NO
<b>2024/26 Use Attainment Summary</b>	

The Secondary Contact Recreation Use for East Branch (MA73-05) is assessed as Not Supporting. An Escherichia Coli (E. Coli) impairment is being added based on bacteria data collected at 1 station in 2018-2022. MassDEP and Neponset River Watershed Association (NepRWA) staff/volunteers collected *E. coli* bacteria samples in both the historic (1997-2010) & the current IR window (2011-2022) in East Branch from 2008-2022 at 4 stations/combined stations. Samples were collected from the following stations/sample years from upstream to downstream: the upstream end of the AU at W2735 [Revere Court, Canton] from Jul-Sep 2017 (n=2), a third of the way downstream at combined station W0555 & NepRWA\_EAB010 [upstream/E of Neponset St, Canton & E Branch at Neponset St] from 2008-2010 (historic n=6/yr) and 2011-2014 and 2017-2022 (current n=6-8/yr), also a third of the way downstream at W1963 [~260 ft downstream of Neponset St, Canton] from Apr-Sep 2009 (historic n=6) and halfway down the AU at W2736 [on the northern braid, SE from the southern end of Riverview Rd, Canton] from Jul-Sep 2017 (n=2). The available *E. coli* data at W2735 are too limited to assess the Secondary Contact Recreation Use according to the 2024 CALM. Analysis of the recent five years of this multi-year limited frequency *E. coli* dataset from combined station W0555 & NepRWA\_EAB010 indicated 3 out of 5 sufficient data yrs had intervals where >20% of the GMs were >244 CFU/100ml (2018-2019 and 2021, 50-75%) and while only 1 yr had  $\geq 2$  samples exceed the 794 CFU/100ml STV (2018, n=2), cumulatively across years 40% of intervals had GMs >244 CFU/100ml, which is indicative of an Escherichia Coli (E. Coli) impairment. The available *E. coli* data at W2736 are too limited to assess the Secondary Contact Recreation Use according to the 2024 CALM. It should be noted that data in the historic IR window at station W0555 & NepRWA\_EAB010 was also indicative of an Escherichia Coli (E. Coli) impairment, with cumulatively 25% of the GM intervals >244 CFU/100ml and >20% of GM intervals >244 (in 2008 & 2009), for this multi-year low frequency dataset.

## Supporting Information for Removed Impairments

2022 Removed Impairment	Removal Reason	Removal Comment
Aquatic Plants (Macrophytes)	Not caused by a pollutant (4c)	<p>As described in detail in the 2024 CALM guidance document the mapping of Aquatic Plants (Macrophytes) impairments as a pollutant is being reevaluated. Ganawatte Farm Pond (MA73037, also known as Pine Street Pond) was first listed as impaired for Noxious Aquatic Plants in 1996 and this cause was remapped to Aquatic Plants (Macrophytes) during the 2010 IR cycle (MassDEP 2024). The original impairment was based on a June 1994 synoptic survey conducted by MassDEP staff in which it was noted that 90% of the pond was covered with aquatic plants, including the non-rooted, floating species, <i>Ceratophyllum</i> and <i>Utricularia</i> spp. (MassDEP 1994, MassDEP 2002). In Google Earth images from June 2015 and October 2021 the pond is almost entirely filled in with plants (Google Earth Pro Undated). Nutrient/Eutrophication Biological Indicators is being added as an impairment based on the presence of non-rooted, floating, aquatic macrophytes (<i>Ceratophyllum/Utricularia</i> spp.). Additionally, Aquatic Plants (Macrophytes) is being delisted as a pollutant and added again as a non-pollutant because almost the entire pond was covered in recent years. Note: Ganawatte Farm Pond will remain an impaired lake segment for the 2024/26 cycle, however it is very shallow (1.8 m at deep hole) and likely should not be represented as a lake segment (From 314 CMR 4.0 Definition for Lakes and Ponds --waterbodies having open water, situated in a topographical depression, generally with a maximum depth of greater than two meters). The topic of lake vs. wetland will require a structured evaluation procedure likely to be developed as part of a future CALM guidance manual. This waterbody is filled in with macrophytes during the growing season, has little oxygen, and should likely more appropriately be described as a wetland rather than a lake.</p>

Lake/Pond Ganawatte Farm Pond Date 21 June 1994

Town/City Foxborough/Sharon/Walpole Observers R. Haynes  
R. McVoy

Location/type of access (be specific, e.g., public boat ramp at west cove area off Simpson Street):  
Informal, foot path off Pine Street (NE side of pond), near outlet

Ownership of Location/Access (specify public or private, name of owner(s), and any use restrictions):  
Uncertain

Posted signs (re aquatic plants, fish advisories, access, etc.):  
None

Water quality observations (clarity, dissolved organic staining, blooms, et cetera):  
Very dark stained water, little turbidity

Record of aquatic plant "species" observed (see note below):

Nymphaea (dominant), Utricularia, Ceratophyllum  
Potamogeton sp. (nataus?), Pontederia cordata,  
Decodon, Brasenia,

Observed aquatic plant density (at observation site and across lake or pond, if practicable):  
Over 90% likely to cover entire pond later in summer

Other notes (e.g., overt pollution, construction, and water uses:  
305 b Assessment - Eutrophic

1° Contact - 100% Non-support  
2° Contact - 100% Non-support

Causes - Nuisance plants - H (full acreage)

Note: record suspect M. heterophyllum plants that may require confirmation once emergent flowering stalks are evident.

Bill D. note 3/29/19: Ganawatte Farm Pond, Walpole/Foxboro did not register on Google Earth Search, so I had to find it on my own by going to Neponset Reservoir, Foxboro, and proceeding north from its northern most edge ~ 1 mile to locate the Pond.

Google Earth image of Ganawatte Farm Pond, 12/31/2000 (Google Earth Pro Undated):

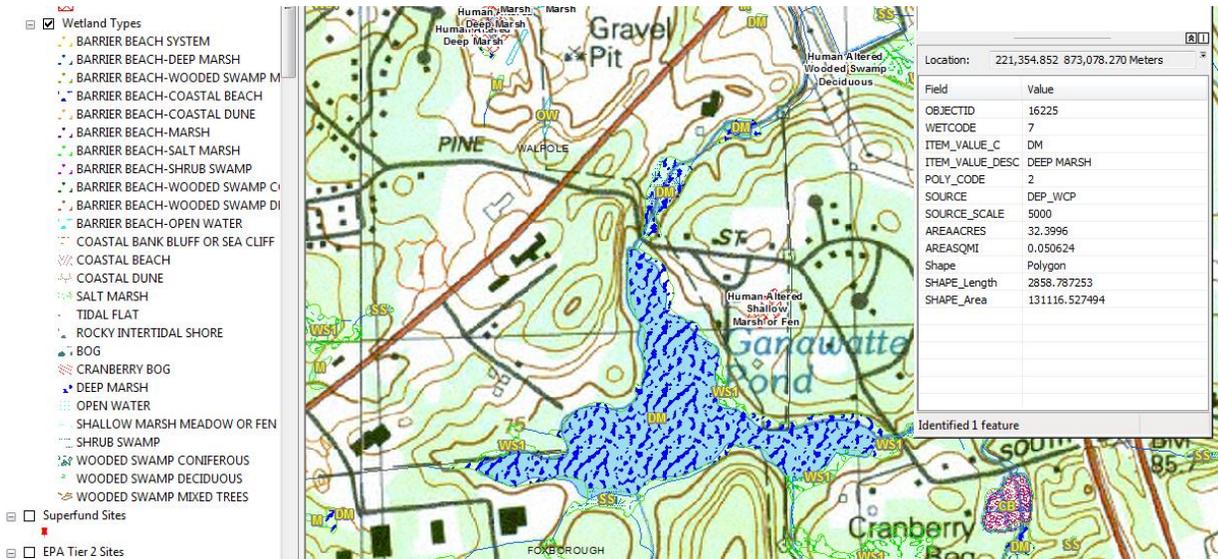

Google Earth image of Ganawatte Farm Pond, 6/6/2015 (Google Earth Pro Undated):

Google Earth image of Ganawatte Farm Pond, 10/12/2021 (Google Earth Pro Undated):

Ganawatte Farm Pond is mapped as a “deep marsh” according to the MassDEP Detailed Wetlands (2005) datalayer (see screen capture below) (MassGIS 2019). (From 314 CMR 4.0 Definition for Lakes and Ponds—waterbodies having open water, situated in a topographical depression, generally with a maximum depth of greater than 2 meters). This waterbody should be removed as a lake AU.

## Designated Use Attainment Decisions

### Fish Consumption

2024/26 Use Attainment	Alert
Not Assessed	NO

2024/26 Use Attainment Summary
Fish toxics sampling has not been conducted recently, so the Fish Consumption Use for Ganawatte Farm Pond (MA73037) is Not Assessed.

### Aesthetic

2024/26 Use Attainment	Alert
Not Supporting	NO

2024/26 Use Attainment Summary
--------------------------------

The Aesthetics Use for Ganawatte Farm Pond (MA73037) continues to be assessed as Not Supporting. The prior pollutant Aquatic Plants (Macrophytes) impairment is being removed and replaced with a non-pollutant Aquatic Plants (Macrophytes) impairment. Additionally a Nutrient/Eutrophication Biological Indicators impairment is being added. Since the Transparency/Clarity impairment was redundantly duplicated across multiple uses for this waterbody, the Transparency/Clarity impairment is being removed from the Aesthetics Use but will continue to be maintained under the Primary Contact Recreation Use. As described in detail in the 2024 CALM guidance document the mapping of Aquatic Plants (Macrophytes) impairments as a pollutant is being reevaluated. Ganawatte Farm Pond (also known as Pine Street Pond) was first listed as impaired for Noxious Aquatic Plants in 1996 and this cause was remapped to Aquatic Plants (Macrophytes) during the 2010 IR cycle (MassDEP 2024). The original impairment was based on a June 1994 synoptic survey conducted by MassDEP staff in which it was noted that 90% of the pond was covered with aquatic plants, including the non-rooted, floating species, *Ceratophyllum* and *Utricularia* spp. (MassDEP 1994, MassDEP 2002). In Google Earth images from June 2015 and October 2021 the pond is almost entirely filled in with plants (Google Earth Pro Undated). Nutrient/Eutrophication Biological Indicators is being added as an impairment based on the presence of non-rooted, floating, aquatic macrophytes (*Ceratophyllum/Utricularia* spp.). Additionally, Aquatic Plants (Macrophytes) is being delisted as a pollutant and added again as a non-pollutant because almost the entire pond was covered in recent years. Note: Ganawatte Farm Pond will remain an impaired lake segment for the 2024/26 cycle, however it is very shallow (1.8 m at deep hole) and likely should not be represented as a lake segment (From 314 CMR 4.0 Definition for Lakes and Ponds –waterbodies having open water, situated in a topographical depression, generally with a maximum depth of greater than two meters). The topic of lake vs. wetland will require a structured evaluation procedure likely to be developed as part of a future CALM guidance manual. This waterbody is filled in with macrophytes during the growing season, has little oxygen, and should likely more appropriately be described as a wetland rather than a lake. No new data is available to evaluate the Aesthetics Use for Ganawatte Farm Pond.

## Primary Contact Recreation

2024/26 Use Attainment	Alert
Not Supporting	NO

2024/26 Use Attainment Summary
No bacteria or other indicator data for Ganawatte Farm Pond (MA73037) are available, so the Primary Contact Recreation Use continues to be assessed as Not Supporting. The prior Transparency / Clarity impairment is being carried forward. The prior pollutant Aquatic Plants (Macrophytes) impairment (from the Aesthetics Use) is being removed and replaced with a non-pollutant Aquatic Plants (Macrophytes) impairment. A Nutrient/Eutrophication Biological Indicators impairment is being added (from the Aesthetics Use).

## Secondary Contact Recreation

2024/26 Use Attainment	Alert
Not Supporting	NO

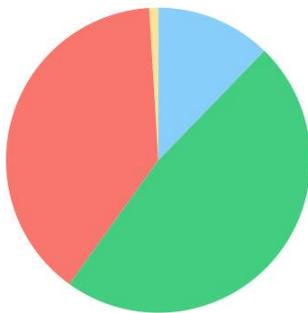

2024/26 Use Attainment Summary
<p>No bacteria or other indicator data for Ganawatte Farm Pond (MA73037) is available in the current IR window (2011-2022), so the Secondary Contact Recreation Use continues to be assessed as Not Supporting. The prior pollutant Aquatic Plants (Macrophytes) impairment (from the Aesthetics Use) is being removed and replaced with a non-pollutant Aquatic Plants (Macrophytes) impairment. A Nutrient/Eutrophication Biological Indicators impairment is being added (from the Aesthetics Use). Since the Transparency / Clarity impairment is being removed from the Aesthetics Use this cycle, this impairment is also being removed from the Secondary Contact Recreation Use.</p>

## Designated Use Attainment Decisions

### Fish Consumption

2024/26 Use Attainment	Alert
Not Assessed	NO

2024/26 Use Attainment Summary
Fish toxics sampling has not been conducted recently, so the Fish Consumption Use for Germany Brook (MA73-15) is Not Assessed.

### Aesthetic

2024/26 Use Attainment	Alert
Insufficient Information	NO

2024/26 Use Attainment Summary
There is insufficient information to assess the Aesthetics Use for Germany Brook (MA73-15). MassDEP staff recorded a limited number of aesthetics observations at three stations on Germany Brook, during the summer of 2016 as part of the MassDEP Bacteria Source Tracking project (BST). These stations are described from upstream to downstream as follows: halfway down the AU at Sycamore Drive, Westwood (W2649, n=2), a little further downstream ~900 feet south of the northern most crossing of Westover Parkway (adjacent to #76 Westover Parkway), Norwood (W2648, n=1) and close to the downstream end of the AU upstream/north of Nichols Street and inlet of Ellis Pond, Norwood (W0545, n=2). There were generally no noted objectionable conditions (odors, deposits, growths, or turbidity) recorded by field sampling crews at any of the stations.

### Monitoring Stations

Station Code	Organization	Type	Water Body	Station Description	Latitude	Longitude
W0545	MassDEP	Water Quality	Germany Brook	[upstream/north of Nichols Street and inlet of Ellis Pond, Norwood]	42.184198	-71.224845

## Primary Contact Recreation

2024/26 Use Attainment	Alert
Not Supporting	NO

2024/26 Use Attainment Summary

The Primary Contact Recreation Use for Germany Brook (MA73-15) continues to be assessed as Not Supporting. The prior Escherichia Coli (E. Coli) impairment is being carried forward based on bacteria data not meeting the threshold at 1 station in 2018-2022. The prior Fecal Coliform impairment is also being carried forward. MassDEP and NepRWA staff/volunteers collected *E. coli* bacteria samples in Germany Brook from 2011-2022 at 3 stations. Samples were collected from the following stations/sample years from upstream to downstream: halfway down the AU at W2649 [Sycamore Drive, Westwood] from Jul-Aug 2016 (n=2), a little further downstream at W2648 [~900 ft S of the northern most crossing of Westover Parkway (adjacent to #76 Westover Parkway), Norwood] from Jul-Aug 2016 (n=2) and close to the downstream end of the AU at combined station W0545 & NepRWA\_GEB020 [upstream/N of Nichols St and inlet of Ellis Pond, Norwood & Germany Brook at inlet of Ellis Pond] from 2011-2014 and 2016-2022 (n=2-6/yr). The available *E. coli* data at both stations W2649 & W2648 are too limited to assess the Primary Contact Recreation Use according to the 2024 CALM. However, analysis of the recent five years of the multi-year limited frequency *E. coli* dataset from combined station W0545 & NepRWA\_GEB020 indicated 5 out of 5 sufficient data yrs had intervals where >20% of the GMs were >126 CFU/100ml (2017-2018 and 2020-2022, 100%), 5 yrs had ≥2 samples exceed the 410 CFU/100ml STV (2017-2018 and 2020-2022, n=3-4) and cumulatively across years 100% of intervals had GMs >126 CFU/100ml, which is indicative of an *E. coli* impairment.

**Summary Statement for 2011-2019 MassDEP Bacteria Source Tracking (BST) Data (MassDEP Undated 1)**

Summary
BST work was conducted in 2013, 2016 & 2017 at 5 sites on the Germany Brook AU (MA73-15), with E.coli concentrations ranging 81 to >2,419.6MPN. BST work was also conducted at 2 stormdrain outfall pipes discharging directly to the brook just downstream of Nichols St during the same time period; dry weather flow was sampled with a max E.coli concentration of >24,196MPN. The Town of Norwood investigated within the drainage infrastructure of Nichols St and narrowed down the location of a human source of bacteria to an illicit cross connection from a house on Devon Rd. However bacteria concentrations still remained elevated after the correction and the Town continues to investigate.

### Secondary Contact Recreation

2024/26 Use Attainment	Alert
Not Supporting	NO

2024/26 Use Attainment Summary
The Secondary Contact Recreation Use for Germany Brook (MA73-15) is assessed as Not Supporting. An Escherichia Coli (E. Coli) impairment is being added due to bacteria data not meeting the threshold at 1 station in 2018-2022. MassDEP and NepRWA staff/volunteers collected <i>E. coli</i> bacteria samples in both the historic (1997-2010) & the current IR window (2011-2022) in Germany Brook (MA73-15) from 2008-2022 at 4 stations/combined stations. Samples were collected from the following stations/sample years from upstream to downstream: W2649 [Sycamore Drive, Westwood] from Jul-Aug 2016 (n=2), W2648 [~900 ft S of the northern most crossing of Westover Parkway (adjacent to #76 Westover Parkway), Norwood] from Jul-Aug 2016 (n=2), W1942 [Westover Parkway crossing nearest Leyton Rd, Norwood] from Apr-Sep 2009 (historic n=5), W0545 & NepRWA_GEB020 [upstream/N of Nichols St and inlet of Ellis Pond, Norwood & Germany Brook at inlet of Ellis Pond] from 2008-2010 (historic n=6/yr) and 2011-2014 and 2016-2022 (current n=2-6/yr). The available <i>E. coli</i> data at both W2649 & W2648 are too limited to assess the Secondary Contact Recreation Use according to the 2024 CALM. However, analysis of the recent five years of this multi-year limited frequency <i>E. coli</i> dataset from W0545 & NepRWA_GEB020 indicated 5 out of 5 sufficient data yrs had intervals where >20% of the GMs were >244 CFU/100ml (2017-2018 and 2020-2022, 75-100%), 5 yrs had ≥2 samples exceed the 794 CFU/100ml STV (2017-2018 and 2020-2022, n=2-3), and cumulatively across years 94% of intervals had GMs >244 CFU/100ml, which is indicative of an <i>E. coli</i> impairment. It should be noted that data in the historic IR window at station W0545 & NepRWA_GEB020 was also indicative of an Escherichia Coli (E. Coli) impairment, with 83% cumulatively of the GM intervals >244 CFU/100ml for this multi-year low frequency dataset.

### Monitoring Stations

## Designated Use Attainment Decisions

### Fish Consumption

<b>2024/26 Use Attainment</b>	<b>Alert</b>
-------------------------------	--------------

Not Supporting	NO
----------------	----

**2024/26 Use Attainment Summary**

The Fish Consumption Use for Gulliver Creek (MA73-30) continues to be assessed as Not Supporting and the prior PCBs in Fish Tissue and Cause Unknown [Contaminants in Fish and/or Shellfish] impairment is being carried forward. MDPH included a site-specific advisory for Gulliver Creek (referred to by MDPH as "Boston Harbor") in their 2017 Guide to Eating Fish Safely in Massachusetts. The public should refer to the most recent MDPH information for the most up to date meal advice for sensitive and general populations.

**Shellfish Harvesting**

<b>2024/26 Use Attainment</b>	<b>Alert</b>
Insufficient Information	NO

**2024/26 Use Attainment Summary**

Gulliver Creek (MA73-30): The total of all shellfish growing area classifications (MassGIS, 2024) within this AU is 0.0134 sq mi (73%). The sum of the approved, conditionally approved, and restricted shellfish growing areas represents 0 sq mi (0%). The prohibited shellfish growing area represents 0.0134 sq mi (73%). There is insufficient information available to assess the Shellfish Harvesting Use because the growing areas within this AU are classified as entirely prohibited.

**Shellfish Growing Area Classifications**

MassDFG-Division of Marine Fisheries Shellfish Growing Area Classification Data (MassGIS 2024) (MassDEP Undated 7)

Area Name	Waterbody/Area Description	Classification	Area (Sq. Mi.)	Area (% of AU)
GBH3.0	Dorchester Bay And Neponset River	Prohibited	0.01344	73.0%

**Aesthetic**

<b>2024/26 Use Attainment</b>	<b>Alert</b>
Not Assessed	NO

**2024/26 Use Attainment Summary**

No data are available, so the Aesthetics Use for Gulliver Creek (MA73-30) is Not Assessed.

**Primary Contact Recreation**

<b>2024/26 Use Attainment</b>	<b>Alert</b>
Not Supporting	NO

**2024/26 Use Attainment Summary**

The Primary Contact Recreation Use for Gulliver Creek (MA73-30) continues to be assessed as Not Supporting. The prior Fecal Coliform impairment is being carried forward since the shellfish growing areas (0.0134 sq mi) in this AU are less than 100% approved (0 sq mi, 0%).

**Shellfish Growing Area Classifications**

**Summary Statement for MassDFG Shellfish Growing Area Classification Data** (MassGIS 2024) (MassDEP Undated 7)

<b>Summary</b>
Gulliver Creek (MA73-30): The total of all shellfish growing area classifications (MassGIS, 2024) within this AU is 0.0134 sq mi (73%). The approved shellfish growing area represents 0 sq mi (0%). Because the total of all shellfish growing area classifications is anything less than “approved”, the Primary Contact Recreational Use cannot be assessed for 2024 using the shellfish classification data.

**Secondary Contact Recreation**

<b>2024/26 Use Attainment</b>	<b>Alert</b>
Insufficient Information	NO

<b>2024/26 Use Attainment Summary</b>
No bacteria data are available to assess the Secondary Contact Recreation Use for Gulliver Creek (MA73-30), so it is assessed as having Insufficient Information. The shellfish growing areas (0.0134 sq mi) in this AU are less than 100% approved (0 sq mi, 0%), which means that shellfish classification data were too limited to assess the Secondary Contact Recreation Use of Gulliver Creek.

**Shellfish Growing Area Classifications**

**Summary Statement for MassDFG Shellfish Growing Area Classification Data** (MassGIS 2024) (MassDEP Undated 7)

<b>Summary</b>
Gulliver Creek (MA73-30): The total of all shellfish growing area classifications (MassGIS, 2024) within this AU is 0.0134 sq mi (73%). The approved shellfish growing area represents 0 sq mi (0%). Because the total of all shellfish growing area classifications is anything less than “approved”, the Secondary Contact Recreational Use cannot be assessed for 2024 using the shellfish classification data.

# Hammer Shop Pond (MA73023)

<b>Location:</b>	Sharon.
<b>AU Type:</b>	FRESHWATER LAKE
<b>AU Size:</b>	2 ACRES
<b>Classification/Qualifier:</b>	B

No usable data were available for Hammer Shop Pond (MA73023) for the 2024/26 Integrated Reporting cycle, therefore its category, use attainments, impairments, associated actions, and sources remain unchanged from the previous cycle.

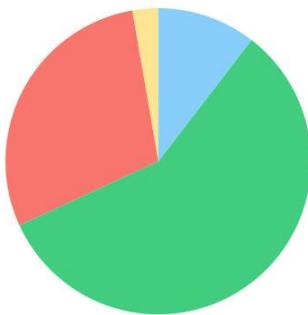

<b>AU Category 2022</b>	<b>AU Category 2024/26</b>	<b>Impairment</b>	<b>ATTAINS Action ID</b>	<b>Impairment Change Summary</b>
3	3	None	--	Unchanged

## Designated Use Attainment Decisions

### Fish Consumption

2024/26 Use Attainment	Alert
Not Assessed	NO

2024/26 Use Attainment Summary
Fish toxics sampling has not been conducted recently, so the Fish Consumption Use for Hawes Brook (MA73-16) is Not Assessed.

### Aesthetic

2024/26 Use Attainment	Alert
Not Supporting	NO

2024/26 Use Attainment Summary
The Aesthetics Use for Hawes Brook (MA73-16) continues to be assessed as as Not Supporting with the prior Odor impairment being carried forward. No new data are available to evaluate the Aesthetics Use for Hawes Brook.

### Primary Contact Recreation

2024/26 Use Attainment	Alert
Not Supporting	NO

2024/26 Use Attainment Summary
--------------------------------

The Primary Contact Recreation Use for Hawes Brook (MA73-16) continues to be assessed as Not Supporting. The prior Escherichia Coli (E. Coli) impairment is being carried forward based on bacteria data not meeting the threshold at 3 stations in 2018-2022. In addition, the prior Fecal Coliform impairment is being carried forward and the prior Odor impairment (from the Aesthetics Use) is also being carried forward. Neponset River Watershed Association (NepRWA) staff/volunteers collected *E. coli* bacteria samples in Hawes Brook from 2011-2022 at 3 stations. Samples were collected from the following stations/sample years from upstream to downstream: the upstream end of the AU at NepRWA\_HAB002 [Hawes Brook at Walpole St] from 2011-2014 and 2017-2022 (n=6/yr), halfway down the AU at NepRWA\_HAB006 [Hawes Brook at Endean Park, railRd bridge] from 2011-2014 and 2017-2022 (n=4-6/yr), and about three-quarters of the way down the AU at NepRWA\_HAB010 [Hawes Brook at Washington St] from 2011-2014 and 2017-2022 (n=5-6/yr). Analysis of the recent five years of the multi-year limited frequency *E. coli* datasets from all three stations are as follows: NepRWA\_HAB002 indicated 4 out of 5 sufficient data yrs had intervals where >20% of the GMs were >126 CFU/100ml (2018-2019 and 2021-2022, 25-75%), 1 yr had ≥2 samples exceed the 410 CFU/100ml STV (2021, n=2), and cumulatively across years 40% of intervals had GMs >126 CFU/100ml; NepRWA\_HAB006 indicated 5 out of 5 sufficient data yrs had intervals where >20% of the GMs were >126 CFU/100ml (2017-2019 and 2021-2022, 100%), 5 yrs had ≥2 samples exceed the 410 CFU/100ml STV (2017-2019 and 2021-2022, n=2-4), and cumulatively across years 100% of intervals had GMs >126 CFU/100ml and NepRWA\_HAB010 indicated 5 out of 5 sufficient data yrs had intervals where >20% of the GMs were >126 CFU/100ml (2018-2022, 100%), 5 yrs had ≥2 samples exceed the 410 CFU/100ml STV (2018-2022, n=2-4), and cumulatively across years 100% of intervals had GMs >126 CFU/100ml. *E. coli* data from NepRWA\_HAB002, NepRWA\_HAB006, and NepRWA\_HAB010 are all indicative of an Escherichia Coli (E. Coli) impairment.

### Summary Statement for 2011-2019 MassDEP Bacteria Source Tracking (BST) Data (MassDEP Undated 1)

#### Summary

Prior to 2011, BST work was conducted on an unnamed tributary discharging to roughly the middle of the Hawes Brook AU (MA73-16), between Davis Ave & Alandale Pkwy, with a max dry weather E.coli concentration of 2,987MPN just downstream of Rt.1A & >2,419.6MPN just before the confluence with Hawes Bk. In 2009 human marker analysis indicated "strong evidence" of a human source at the downstream end of the tributary & also halfway up the tributary (just upstream of Rt.1A). Additional BST work was conducted in 2011-2016 at 13 sites on the tributary, with E.coli concentrations ranging 14 to >2,419.6MPN throughout & 680 to 1,100MPN at the confluence. In 2012 a drain outfall discharging from Damon Ct/Windsor Grdns was ruled out as a human source of bacteria. Ultimately, elevated bacteria concentrations were tracked to originating intermittently from "twin culverts" marking the headwaters of the tributary, just downgradient of Arcadia Rd. The Town of Norwood investigated within the drainage infrastructure of these culverts in 2012, 2013 & 2014. The Town reported in 2014 that three direct house (sewer) connections to the stormwater system were found on Fieldbrook Drive and that work was underway to redirect these connections to the sanitary sewer system. In 2015- follow up sampling at the twin culverts indicated improved E.coli concentrations (max E.coli concentration of 290MPN), which proved the corrections to have been successful. Follow up samples have not yet been collected at the downstream end of the tributary post 2015.

### Secondary Contact Recreation

<b>2024/26 Use Attainment</b>	<b>Alert</b>
Not Supporting	NO

<b>2024/26 Use Attainment Summary</b>
---------------------------------------

The Secondary Contact Recreation Use for Hawes Brook (MA73-16) continues to be assessed as Not Supporting. The prior Odor impairment (from the Aesthetics Use) is being carried forward. An Escherichia Coli (E. Coli) impairment is being added due to bacteria data not meeting the threshold at 2 stations in 2018-2022. MassDEP and Neponset River Watershed Association (NepRWA) staff/volunteers collected *E. coli* bacteria samples in both the historic (1997-2010) & the current IR window (2011-2022) in Hawes Brook from 2008-2022 at 4 stations. Samples were collected from the following stations/sample years from upstream to downstream: the upstream end of the AU at NepRWA\_HAB002 [Hawes Brook at Walpole St] from 2008-2010 (historic n=5-6/yr) and 2011-2014 and 2017-2022 (current n=6/yr), halfway down the AU at NepRWA\_HAB006 [Hawes Brook at Endean Park, railRd bridge] from 2008-2010 (historic n=6/yr) and 2011-2014 and 2017-2022 (current n=4-6/yr), about three-quarters of the way down the AU at W0544 [upstream of Washington St, Norwood (above influence of pool discharge pipe on southern bank)] from Apr-Sep 2009 (historic n=5) and NepRWA\_HAB010 [Hawes Brook at Washington St] from 2008-2010 (historic n=4-6/yr) and 2011-2014 and 2017-2022 (current n=5-6/yr). Water quality conditions were relatively good at the upstream end of the AU, with analysis of the recent five years of this multi-year limited frequency *E. coli* dataset from NepRWA\_HAB002 indicating 1 out of 5 sufficient data yrs had intervals where >20% of the GMs were >244 CFU/100ml (2019, 75%), 0 yrs had ≥2 samples exceed the 794 CFU/100ml STV, and cumulatively across years only 15% of intervals had GMs >244 CFU/100ml. However, further down the AU conditions worsened with analysis of the recent five years of the multi-year limited frequency *E. coli* dataset from NepRWA\_HAB006 indicating 5 out of 5 sufficient data yrs had intervals where >20% of the GMs were >244 CFU/100ml (2017-2019 and 2021-2022, 75-100%), 1 yr had ≥2 samples exceed the 794 CFU/100ml STV (2018, n=2), and cumulatively across years 92% of intervals had GMs >244 CFU/100ml. Also analysis of the recent five years of the multi-year limited frequency *E. coli* dataset from NepRWA\_HAB010 indicated 5 out of 5 sufficient data yrs had intervals where >20% of the GMs were >244 CFU/100ml (2018-2022, 50-100%), 4 yrs had ≥2 samples exceed the 794 CFU/100ml STV (2018 and 2020-2022, n=2-4), and cumulatively across years 94% of intervals had GMs >244 CFU/100ml. It should be noted that data in the historic IR window at both station's NepRWA\_HAB006 and NepRWA\_HAB010 were also indicative of an Escherichia Coli (E. Coli) impairment, with cumulatively 41% & 40% respectively of the GM intervals >244 CFU/100ml, for these multi year low frequency datasets. While *E. coli* data from NepRWA\_HAB002 meet 2024 CALM guidance, *E. coli* data from NepRWA\_HAB006 and NepRWA\_HAB010 are indicative of an Escherichia Coli (E. Coli) impairment.

## Designated Use Attainment Decisions

### Fish Consumption

<b>2024/26 Use Attainment</b>	<b>Alert</b>
Not Assessed	NO

<b>2024/26 Use Attainment Summary</b>
Fish toxics sampling has not been conducted recently, so the Fish Consumption Use for Massapoag Brook (MA73-21) is Not Assessed.

### Aesthetic

<b>2024/26 Use Attainment</b>	<b>Alert</b>
Not Assessed	NO

<b>2024/26 Use Attainment Summary</b>
No data are available, so the Aesthetics Use for Massapoag Brook (MA73-21) is Not Assessed.

### Primary Contact Recreation

<b>2024/26 Use Attainment</b>	<b>Alert</b>

Not Supporting	NO
----------------	----

### 2024/26 Use Attainment Summary

The Primary Contact Recreation Use for Massapoag Brook (MA73-21) is assessed as Not Supporting. An Escherichia Coli (E. Coli) impairment is being added due to bacteria data not meeting the threshold at 1 station in 2018-2022. Neponset River Watershed Association (NepRWA) staff/volunteers collected *E. coli* bacteria samples in Massapoag Brook from 2011-2022 at 2 stations. Samples were collected from the following stations/sample years from upstream to downstream: a quarter of the way down the brook at NepRWA\_MPB037 [Massapoag Brook at Billings St] from 2011-2014 and 2017-2022 (n=5-6/yr) and close to the downstream end of the AU at NepRWA\_MPB088 [Massapoag Brook at Walnut St] from 2011-2014 and 2017-2022 (n=4-6/yr). Analysis of the recent five years of the multi-year limited frequency *E. coli* dataset from NepRWA\_MPB037 indicated 1 out of 5 sufficient data yrs had intervals where >20% of the GMs were >126 CFU/100ml (2018, 50%), 1 yr had ≥2 samples exceed the 410 CFU/100ml STV (2018, n=2), and cumulatively across years 10% of intervals had GMs >126 CFU/100ml, which meets 2024 CALM guidance. However, analysis of the recent five years of the multi-year limited frequency *E. coli* dataset from NepRWA\_MPB088 indicated 5 out of 5 sufficient data yrs had intervals where >20% of the GMs were >126 CFU/100ml (2017-2018 and 2020-2022, 25-100%), 2 yrs had ≥2 samples exceed the 410 CFU/100ml STV (2021 and 2022, n=2 & 4), and cumulatively across years 55% of intervals had GMs >126 CFU/100ml, which is indicative of an Escherichia Coli (E. Coli) impairment.

### Monitoring Stations

Station Code	Organization	Type	Water Body	Station Description	Latitude	Longitude

 \*Recent 5 Years\* may not be consecutive as the analysis excludes years without GMI meeting the minimum sample size.

**Secondary Contact Recreation**

<b>2024/26 Use Attainment</b>	<b>Alert</b>
Not Supporting	NO
<b>2024/26 Use Attainment Summary</b>	

The Secondary Contact Recreation Use for Massapoag Brook (MA73-21) is assessed as Not Supporting. An Escherichia Coli (E. Coli) impairment is being added due to bacteria data not meeting the threshold at 1 station in 2018-2022. MassDEP and Neponset River Watershed Association (NepRWA) staff/volunteers collected *E. coli* bacteria samples in both the historic (1997-2010) & the current IR window (2011-2022) in Massapoag Brook from 2008-2022 at 3 stations. Samples were collected from the following stations/sample years from upstream to downstream: a quarter of the way down the brook at NepRWA\_MPB037 [Massapoag Brook at Billings St] from 2008-2010 (historic n=6/yr) and 2011-2014 and 2017-2022 (current n=5-6/yr), close to the downstream end of the AU at NepRWA\_MPB088 [Massapoag Brook at Walnut St] from 2008-2010 (historic n=5-6/yr) and 2011-2014 and 2017-2022 (current n=4-6/yr), and the downstream end at W1946 [Mechanic St, Canton] from Apr-Sep 2009 (historic n=6). Since bacteria data from the historic IR window are all indicative of good water quality conditions, only the analysis from the current IR window (2 stations) will be summarized here. Analysis of the recent five years of the multi-year limited frequency *E. coli* dataset from NepRWA\_MPB037 indicated 1 out of 5 sufficient data yrs had intervals where >20% of the GMs were >244 CFU/100ml (2018, 50%), 1 yr had ≥2 samples exceed the 794 CFU/100ml STV (2018, n=2), and cumulatively across years 10% of intervals had GMs >244 CFU/100ml, which meets 2024 CALM guidance. However, analysis of the recent five years of the multi-year limited frequency *E. coli* dataset from NepRWA\_MPB088 indicated 3 out of 5 sufficient data yrs had intervals where >20% of the GMs were >244 CFU/100ml (2018 and 2021-2022, 50-75%) and while only 1 yr had ≥2 samples exceed the 794 CFU/100ml STV (2021, n=2), cumulatively across years 33% of intervals had GMs >244 CFU/100ml, which is indicative of an Escherichia Coli (E. Coli) impairment.

## Recommendations

2024/26 Recommendations
2024IR [Harmful Algal Blooms, Low] Follow-up monitoring should be conducted in Massapoag Lake (MA73030) to determine if Harmful Algal Blooms may be impairing the Recreational and Aesthetic uses. Monitoring should include observational data and collection of cyanobacteria cell count data, as well as continued reporting of algal blooms to MDPH.

## Designated Use Attainment Decisions

### Fish Consumption

2024/26 Use Attainment	Alert
Not Supporting	NO

2024/26 Use Attainment Summary
<p>The Fish Consumption Use for Massapoag Lake (MA73030) continues to be assessed as Not Supporting and the prior Mercury in Fish Tissue impairment is being carried forward. Fish toxics sampling was conducted in Massapoag Lake (MA73030) at station F0326 in 2020 as part of the MassDEP Office of Research and Standards Mercury Initiative. MDPH included a site-specific advisory for Massapoag Lake in their January 2025 Freshwater Fish Consumption Advisory List. The public should refer to the most recent MDPH Freshwater Fish Consumption Advisory List for the most up to date meal advice for sensitive and general populations.</p>

### Fish Consumption Advisories

**Summary of Fish Toxics Sampling and Resulting Fish Consumption Advisories** (MA DPH 2025) (MassDEP Undated 8)

Summary Statement
<p>Fish toxics sampling was conducted in Massapoag Lake (MA73030) at station F0326 in 2020 as part of the MassDEP Office of Research and Standards Mercury Initiative. MA DPH retained the existing site-specific fish consumption advisories for Mercury associated with Massapoag Lake in their January 2025 Freshwater Fish Consumption Advisory List. The site-specific DPH advisories are indicative of a Fish Consumption Use impairment for Mercury in Fish Tissue for Massapoag Lake (MA73030).</p>

### Aesthetic

2024/26 Use Attainment	Alert
Insufficient Information	YES

2024/26 Use Attainment Summary
<p>Too limited data are available to assess the Aesthetics Use for Massapoag Lake (MA73030), so it is assessed as having Insufficient Information. However, an Alert is being identified for Harmful Algal Blooms in this waterbody since C-HAB postings (a bloom of 15 days in duration) was reported to MDPH for 2021. During the period 2015 through 2022, C-HAB postings for Massapoag Lake were reported to MDPH based on visual observations for 9 days in 2019 and 15 days in 2021 and no blooms were reported in other years. Since no extended blooms (&gt;20 days in duration) based on cell count data were reported in recent years, an impairment decision will not be made at this time based on C-HAB postings. However, an Alert is being identified for Harmful Algal Blooms and a recommendation for follow-up sampling will be made.</p>

## Algal Bloom Information

**Cyanobacteria Harmful Algal Bloom (C-HAB) Summary Statements for 2015-2022 MDPH Data** (Bailey, Logan April 26, 2023) (MassDEP Undated 3)

<b>C-HAB Summary Statement</b>
During the period 2015 through 2022, C-HAB postings for Massapoag Lake (MA73030) were reported to MDPH based on visual observations for 9 days in 2019 and 15 days in 2021. No blooms were reported in other years. Since no extended blooms (>20 days in duration) based on cell count data were reported in recent years, an impairment decision will not be made at this time based on C-HAB postings. However, an Alert is being identified for C-HABs in this waterbody and a recommendation for follow-up sampling will be made.

**Cyanobacteria Harmful Algal Bloom (C-HAB) Data (2015-2022) Provided by MDPH** (Bailey, Logan April 26, 2023) (MassDEP Undated 3)

## Primary Contact Recreation

<b>2024/26 Use Attainment</b>	<b>Alert</b>
Insufficient Information	YES

<b>2024/26 Use Attainment Summary</b>
No bacteria data are available to assess the Primary Contact Recreation Use for Massapoag Lake (MA73030) and available other indicators for this AU did not result in any impairment, so it is assessed as having Insufficient Information. However, an Alert is being identified for Harmful Algal Blooms in this waterbody since C-HAB postings (a bloom of 15 days in duration) was reported to MDPH for 2021. During the period 2015 through 2022, C-HAB postings for Massapoag Lake were reported to MDPH based on visual observations for 9 days in 2019 and 15 days in 2021 and no blooms were reported in other years. Since no extended blooms (>20 days in duration) based on cell count data were reported in recent years, an impairment decision will not be made at this time based on C-HAB postings. However, an Alert is being identified for Harmful Algal Blooms and a recommendation for follow-up sampling will be made.

## Secondary Contact Recreation

<b>2024/26 Use Attainment</b>	<b>Alert</b>
Insufficient Information	YES

**2024/26 Use Attainment Summary**

No bacteria data are available to assess the Secondary Contact Recreation Use for Massapoag Lake (MA73030) and available other indicators for this AU did not result in any impairment, so it is assessed as having Insufficient Information. However, an Alert is being identified for Harmful Algal Blooms in this waterbody since C-HAB postings (a bloom of 15 days in duration) was reported to MDPH for 2021. During the period 2015 through 2022, C-HAB postings for Massapoag Lake were reported to MDPH based on visual observations for 9 days in 2019 and 15 days in 2021 and no blooms were reported in other years. Since no extended blooms (>20 days in duration) based on cell count data were reported in recent years, an impairment decision will not be made at this time based on C-HAB postings. However, an Alert is being identified for Harmful Algal Blooms and a recommendation for follow-up sampling will be made.

## Supporting Information for Removed Impairments

2022 Removed Impairment	Removal Reason	Removal Comment
Aquatic Plants (Macrophytes)	Not caused by a pollutant (4c)	As described in detail in the 2024 CALM guidance document the mapping of Aquatic Plants (Macrophytes) impairments as a pollutant is being reevaluated. Memorial Pond (MA73012) was first listed as impaired for Noxious Aquatic Plants in 1992 and this cause was remapped to Aquatic Plants (Macrophytes) during the 2010 IR cycle (MassDEP 2024). The original impairment was based on a June 1994 synoptic survey conducted by MassDEP staff in which it was noted that most of the pond was covered with dense/very dense aquatic plants, including the non-rooted, floating species, <i>Lemna/Ceratophyllum/Spirodela</i> spp., as well as filamentous algae (MassDEP 1994, MassDEP 2002). Google Earth images from August 2013, June 2015 and October 2020 show high amounts of plant coverage (>25%) (Google Earth Pro Undated). Nutrient/Eutrophication Biological Indicators is being added as an impairment based on the presence of non-rooted, floating, aquatic macrophyte species. Additionally, Aquatic Plants (Macrophytes) is being delisted as a pollutant and added again as a non-pollutant since more than 25% of the pond was covered in aquatic macrophytes in recent years.

### Aquatic Plants (Macrophytes)

1996 WBS Coding Sheet (MassDEP 2002) (Note: This assessment unit was incorrectly named “Diamond Pond” on this sheet, however the geographical coordinates correspond with Memorial Pond and the identifier is correct (MA73012)):

**Assessment Type**

(Assessment Category => Evaluated )  
 R15- Monitoring data >5 years old  
 R20- Best professional judgement  
 "New" Assessment Category => M E NA

**Media/Pollutants Assessed**

(Toxics Monitoring => N) "New" Toxics Monitoring => YES or NO

**Comments:**

VERY DENSE GROWTHS OF AQUATIC MACROPHYTES COVER THE ENTIRE POND. HISTORICALLY ALGAL "BLOOMS" REDUCED TRANSPARENCY TO BELOW THE SAFETY CRITERIA (4 FT. SECCHI DISK), BUT THESE DATA ARE TOO OLD TO USE IN MAKING CURRENT ASSESSMENTS.

1996:

Assessment remains same as last based on previous evaluation. Adjustment in cause and source based on EPA guidance.

9/12/94

Page 1 of 2

Lake/Pond Memorial Pond Date 24 June 94

Town/City Walpole Observers R. Haynes  
R. McVoy

Location/type of access (be specific, e.g., public boat ramp at west cove area off Simpson Street):  
Park across from Town Hall; foot access.

Ownership of Location/Access (specify public or private, name of owner(s), and any use restrictions):  
Town

Posted signs (re aquatic plants, fish advisories, access, etc.):  
None

Water quality observations (clarity, dissolved organic staining, blooms, et cetera):  
- Greyish blue translucent turbidity in water; oily sheen on surface in places; much debris on bottoms.  
- Toward outlet, milky turbidity w/ yellowish cast  
- Shallow  
- Hypereutrophic; ugly!

Record of aquatic plant "species" observed (see note below):

Pontederia, Peltandra, ~~Lythrum Salicaria~~, Nuphar  
Spirodela, Lemna, Ceratophyllum, Scirpus, Typha,  
Sparganium, Filamentous algae

Observed aquatic plant density (at observation site and across lake or pond, if practicable):

Dense → v. dense patches of weeds cover most of pond.

Other notes (e.g., overt pollution, construction, and water uses:

305b Assessment - Hypereutrophic

1° Contact - 100% Non-support

2° Contact - 100% Non-support

Causes - Turbidity - M (Full acreage)  
Noxious plants - M (Full acreage)

Note: record suspect M. heterophyllum plants that may require confirmation once emergent flowering stalks are evident.

## Designated Use Attainment Decisions

### Fish Consumption

<b>2024/26 Use Attainment</b>	<b>Alert</b>
Not Assessed	NO

<b>2024/26 Use Attainment Summary</b>
Fish toxics sampling has not been conducted recently, so the Fish Consumption Use for Memorial Pond (MA73012) is Not Assessed.

### Aesthetic

<b>2024/26 Use Attainment</b>	<b>Alert</b>
Not Supporting	NO

<b>2024/26 Use Attainment Summary</b>
---------------------------------------

The Aesthetics Use for Memorial Pond (MA73012) continues to be assessed as as Not Supporting. The prior pollutant Aquatic Plants (Macrophytes) impairment is being removed and replaced with a non-pollutant Aquatic Plants (Macrophytes) impairment. Additionally a Turbidity impairment is being carried forward and a Nutrient/Eutrophication Biological Indicators impairment added. As described in detail in the 2024 CALM guidance document the mapping of Aquatic Plants (Macrophytes) impairments as a pollutant is being reevaluated. Memorial Pond was first listed as impaired for Noxious Aquatic Plants in 1992 and this cause was remapped to Aquatic Plants (Macrophytes) during the 2010 IR cycle (MassDEP 2024). The original impairment was based on a June 1994 synoptic survey conducted by MassDEP staff in which it was noted that most of the pond was covered with dense/very dense aquatic plants, including the non-rooted, floating species, Lemna/Ceratophyllum/Spirodela spp., as well as filamentous algae (MassDEP 1994, MassDEP 2002). Google Earth images from August 2013, June 2015 and October 2020 show high amounts of plant coverage (>25%) (Google Earth Pro Undated). Nutrient/Eutrophication Biological Indicators is being added as an impairment based on the presence of non-rooted, floating, aquatic macrophyte species. Additionally, Aquatic Plants (Macrophytes) is being delisted as a pollutant and added again as a non-pollutant since more than 25% of the pond was covered in aquatic macrophytes in recent years. No new data are available to evaluate the Aesthetics Use for Memorial Pond.

### Primary Contact Recreation

2024/26 Use Attainment	Alert
Not Supporting	NO

2024/26 Use Attainment Summary
No bacteria or other indicator data for Memorial Pond (MA73012) are available, so the Primary Contact Recreation Use continues to be assessed as Not Supporting. The prior pollutant Aquatic Plants (Macrophytes) impairment (from the Aesthetics Use) is being removed and replaced with a non-pollutant Aquatic Plants (Macrophytes) impairment. The Turbidity impairment (from the Aesthetics Use) is being carried forward and a Nutrient/Eutrophication Biological Indicators impairment is being added (from the Aesthetics Use).

### Secondary Contact Recreation

2024/26 Use Attainment	Alert
Not Supporting	NO

2024/26 Use Attainment Summary

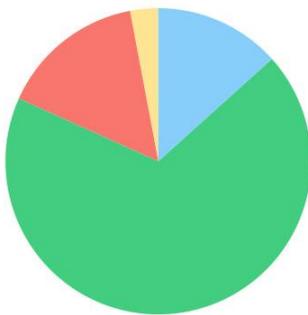

No bacteria or other indicator data for Memorial Pond (MA73012) are available in the current IR window (2011-2022), so the Secondary Contact Recreation Use continues to be assessed as Not Supporting. The prior pollutant Aquatic Plants (Macrophytes) impairment (from the Aesthetics Use) is being removed and replaced with a non-pollutant Aquatic Plants (Macrophytes) impairment. The Turbidity impairment (from the Aesthetics Use) is being carried forward and a Nutrient/Eutrophication Biological Indicators impairment is being added (from the Aesthetics Use).

### Primary Contact Recreation

<b>2024/26 Use Attainment</b>	<b>Alert</b>
Not Supporting	NO

<b>2024/26 Use Attainment Summary</b>

The Primary Contact Recreation Use for Mill Brook (MA73-08) is assessed as Not Supporting. An Escherichia Coli (E. Coli) impairment is being added due to bacteria data not meeting the threshold at 1 station in 2018-2022. Neponset River Watershed Association (NepRWA) staff/volunteers collected *E. coli* bacteria samples close to the downstream end of Mill Brook at NepRWA\_MIB030 [Mine Brook at Nebo St] from 2011-2014 and 2017-2022 (n=4-6/yr). Analysis of the recent five years of this multi-year limited frequency dataset from this station indicated 3 out of 5 sufficient data yrs had intervals where >20% of the GMs were >126 CFU/100ml (2018 and 2021-2022, 50-100%) and while only 1 yr had ≥2 samples exceed the 410 CFU/100ml STV (2018, n=3), cumulatively across years 54% of intervals had GMs >126 CFU/100ml, which is indicative of an Escherichia Coli (E. Coli) impairment.

## Secondary Contact Recreation

<b>2024/26 Use Attainment</b>	<b>Alert</b>
Not Supporting	NO

<b>2024/26 Use Attainment Summary</b>
---------------------------------------

The Secondary Contact Recreation Use for Mill Brook (MA73-08) is assessed as Not Supporting. An Escherichia Coli (E. Coli) impairment is being added due to bacteria data not meeting the threshold at 1 station in 2018-2022. MassDEP and Neponset River Watershed Association (NepRWA) staff/volunteers collected *E. coli* bacteria samples in both the historic (1997-2010) & the current IR window (2011-2022) in Mill Brook (MA73-08) from 2008-2022 at 2 stations. Samples were collected from the following stations/sample years from upstream to downstream: two-thirds of the way down the AU at W1938 [the Mill Brook Rd crossing nearest Nebo St, Medfield] from Apr-Sep 2009 (historic n=5), and close to the downstream end of the AU at NepRWA\_MIB030 [Mine Brook at Nebo St] from 2008-2010 (historic n=3-6/yr) and 2011-2014 and 2017-2022 (current n=4-6/yr). Since bacteria data from the historic IR window are all indicative of good water quality conditions, only the analysis from the current IR window (1 station) will be summarized here. Analysis of the recent five years of this multi-year limited frequency *E. coli* dataset from NepRWA\_MIB030 indicated 3 out of 5 sufficient data yrs had intervals where >20% of the GMs were >244 CFU/100ml (2018 and 2021-2022, 25-100%), 1 yr had ≥2 samples exceed the 794 CFU/100ml STV (2018, n=2) and cumulatively across years 27% of intervals had GMs >244 CFU/100ml, which is indicative of an Escherichia Coli (E. Coli) impairment.

**Primary Contact Recreation**

<b>2024/26 Use Attainment</b>	<b>Alert</b>
Not Supporting	NO

**2024/26 Use Attainment Summary**

The Primary Contact Recreation Use for Mill Brook (MA73-12) is assessed as Not Supporting. An Escherichia Coli (E. Coli) impairment is being added due to bacteria data not meeting the threshold at 1 station in 2018-2022. Neponset River Watershed Association (NepRWA) staff/volunteers collected *E. coli* bacteria samples at the downstream end of Mill Brook at NepRWA\_MLB024 [Mill Brook at inlet of Petee’s Pond] from 2011-2014 and 2017-2022 (n=5-6/yr). Analysis of the recent five years of the multi-year limited frequency dataset from this station indicated 5 out of 5 sufficient data yrs had intervals where >20% of the GMs were >126 CFU/100ml (2018-2022, 50-100%), 3 yrs had ≥2 samples exceed the 410 CFU/100ml STV (2018 and 2021-2022, n=2), and cumulatively across years 72% of intervals had GMs >126 CFU/100ml, which is indicative of an Escherichia Coli (E. Coli) impairment.

## Secondary Contact Recreation

<b>2024/26 Use Attainment</b>	<b>Alert</b>
Not Supporting	NO
<b>2024/26 Use Attainment Summary</b>	

The Secondary Contact Recreation Use for Mill Brook (MA73-12) is assessed as Not Supporting. An Escherichia Coli (E. Coli) impairment is being added due to bacteria data not meeting the threshold at 1 station in 2018-2022. MassDEP and Neponset River Watershed Association (NepRWA) staff/volunteers collected *E. coli* bacteria samples in both the historic (1997-2010) & the current IR window (2011-2022) in Mill Brook from 2008-2022 at 2 stations. Samples were collected from the following stations/sample years from upstream to downstream: close to the downstream end of the AU at W1941 [the Tamarack Rd crossing nearest Briar Lane, Westwood] from Apr-Sep 2009 (historic n=5), and the downstream end of the AU at NepRWA\_MLB024 [Mill Brook at inlet of Petee's Pond] from 2008-2010 (historic n=5-6/yr) and 2011-2014 and 2017-2022 (current n=5-6/yr). Since bacteria data from the historic IR window are all indicative of good water quality conditions, only the analysis from the current IR window (1 station) will be summarized here. Analysis of the recent five years of the multi-year limited frequency *E. coli* dataset from NepRWA\_MLB024 indicated 4 out of 5 sufficient data yrs had intervals where >20% of the GMs were >244 CFU/100ml (2018-2019 and 2021-2022, 33-100%), and while only 1 yr had ≥2 samples exceed the 794 CFU/100ml STV (2021, n=2), cumulatively across years 55% of intervals had GMs >244 CFU/100ml, which is indicative of an Escherichia Coli (E. Coli) impairment.

### Fish Consumption

2024/26 Use Attainment	Alert
------------------------	-------

Not Assessed	NO
--------------	----

2024/26 Use Attainment Summary	
Fish toxics sampling has not been conducted recently, so the Fish Consumption Use for Mine Brook (MA73-09) is Not Assessed.	

## Aesthetic

2024/26 Use Attainment	Alert
Not Assessed	NO

2024/26 Use Attainment Summary	
No data are available, so the Aesthetics Use for Mine Brook (MA73-09) is Not Assessed.	

## Primary Contact Recreation

2024/26 Use Attainment	Alert
Not Assessed	NO

2024/26 Use Attainment Summary	
No bacteria or other indicator data for Mine Brook (MA73-09) are available, so the Primary Contact Recreation Use is Not Assessed.	

## Secondary Contact Recreation

2024/26 Use Attainment	Alert
Not Assessed	NO

2024/26 Use Attainment Summary	
<p>No bacteria or other indicator data for Mine Brook (MA73-09) are available in the current IR window (2011-2022), so the Secondary Contact Recreation Use is Not Assessed. MassDEP staff collected <i>E. coli</i> bacteria samples close to the upstream end of Mine Brook at W1939 [stream crossing off the northern end of Mill Pond Rd, Walpole] from Apr-Sep 2009 (historic n=5). Analysis of the historic single year limited frequency dataset from this station indicated 0% of intervals had GMs &gt;244 CFU/100ml, no samples exceeded the 794 CFU/100ml STV, and the overall GM was 18 CFU/100ml. Historic <i>E. coli</i> data from W1939 meet 2024 CALM guidance. However, since these data were collected prior to the current IR window (2011-2022) the Secondary Contact Recreation Use cannot be positively assessed using bacteria data.</p>

## Designated Use Attainment Decisions

## Fish Consumption

2024/26 Use Attainment	Alert
Not Supporting	NO

2024/26 Use Attainment Summary
The Fish Consumption Use for Mother Brook (MA73-28) continues to be assessed as Not Supporting and the prior DDT in Fish Tissue, PCBs in Fish Tissue, and Mercury in Fish Tissue impairment is being carried forward. MDPH included a site-specific advisory for Mother Brook (referred to by MDPH as "Mother Brook (between Charles River and Knight Street Dam)" or "Mother Brook (between the Knight Street Dam and the Neponset River)") in their January 2025 Freshwater Fish Consumption Advisory List. The public should refer to the most recent MDPH Freshwater Fish Consumption Advisory List for the most up to date meal advice for sensitive and general populations.

## Aesthetic

2024/26 Use Attainment	Alert
Not Supporting	NO

2024/26 Use Attainment Summary
The Aesthetics Use for Mother Brook (MA73-28) continues to be assessed as Not Supporting with the prior Debris, Trash, Odor and Color impairments being carried forward. No new data are available to evaluate the Aesthetics Use for Mother Brook.

## Primary Contact Recreation

2024/26 Use Attainment	Alert
Not Supporting	NO

2024/26 Use Attainment Summary
--------------------------------

The Primary Contact Recreation Use for Mother Brook (MA73-28) continues to be assessed as Not Supporting. The prior Escherichia Coli (E. Coli) impairment is being carried forward based on bacteria data not meeting the threshold at 2 stations in 2018-2022. The prior Fecal Coliform impairment is being carried forward and the prior Color, Debris, Odor, and Trash impairments (from the Aesthetics Use) are also being carried forward. Neponset River Watershed Association (NepRWA) staff/volunteers collected *E. coli* bacteria samples in Mother Brook from 2011-2022 at 2 stations. Samples were collected from the following stations/sample years from upstream to downstream: close to the upstream end at NepRWA\_MOB001 [Mother Brook at Washington St] from 2011-2022 (n=4-6/yr) and close to the downstream end at NepRWA\_MOB032 [Mother Brook at Reservation] from 2011-2022 (n=5-6/yr). Analysis of the recent five years of this multi-year limited frequency *E. coli* dataset from NepRWA\_MOB001 indicated 3 out of 5 sufficient data yrs had intervals where >20% of the GMs were >126 CFU/100ml (2018-2019 and 2021, 75-100%) and while only 1 yr had  $\geq 2$  samples exceed the 410 CFU/100ml STV (2018, n=4), cumulatively across years 55% of intervals had GMs >126 CFU/100ml. Analysis of the recent five years of this multi-year limited frequency *E. coli* dataset from NepRWA\_MOB032 indicated 5 out of 5 sufficient data yrs had intervals where >20% of the GMs were >126 CFU/100ml (2018-2022, 50-100%) and while only 1 yr had  $\geq 2$  samples exceed the 410 CFU/100ml STV (2018, n=3), cumulatively across years 80% of intervals had GMs >126 CFU/100ml. *E. coli* data from both stations NepRWA\_MOB001 and NepRWA\_MOB032 are indicative of an Escherichia Coli (E. Coli) impairment.

## Secondary Contact Recreation

<b>2024/26 Use Attainment</b>	<b>Alert</b>
Not Supporting	NO
<b>2024/26 Use Attainment Summary</b>	

The Secondary Contact Recreation Use for Mother Brook (MA73-28) continues to be assessed as Not Supporting. The prior Color, Debris, Odor, and Trash impairments (from the Aesthetics Use) are being carried forward. An Escherichia Coli (E. Coli) impairment is being added due to bacteria data not meeting the threshold at 2 stations/combined stations in 2018-2022. MassDEP and Neponset River Watershed Association (NepRWA) staff/volunteers collected *E. coli* bacteria samples in both the historic (1997-2010) & the current IR window (2011-2022) in Mother Brook from 2006-2022 at 2 stations. Samples were collected from the following stations/sample years from upstream to downstream: close to the upstream end at NepRWA\_MOB001 [Mother Brook at Washington St] from 2006-2010 (historic n=4-6/yr) and 2011-2022 (current n=4-6/yr), and close to the downstream end at combined station W1949 & NepRWA\_MOB032 [Reservation Rd, in locality of Hyde Park, Boston & Mother Brook at Reservation] from 2006-2010 (historic n=1-9/yr) and 2011-2022 (current n=5-6/yr). Analysis of the recent five years of this multi-year limited frequency *E. coli* dataset from NepRWA\_MOB001 indicated 3 out of 5 sufficient data yrs had intervals where >20% of the GMs were >244 CFU/100ml (2018-2019 and 2021, 25-100%), and while only 1 yr had ≥2 samples exceed the 794 CFU/100ml STV (2018, n=4), cumulatively across years 30% of intervals had GMs >244 CFU/100ml. It should be noted that data in the historic IR window at station NepRWA\_MOB001 was also indicative of an Escherichia Coli (E. Coli) impairment, with cumulatively 41% of the GM intervals >244 CFU/100ml, for this multi year low frequency dataset. Analysis of the recent five years of this multi-year limited frequency *E. coli* dataset from W1949 & NepRWA\_MOB032 indicated 4 out of 5 sufficient data yrs had intervals where >20% of the GMs were >244 CFU/100ml (2018-2019 and 2021-2022, 25-75%), and while 0 yrs had ≥2 samples exceed the 794 CFU/100ml STV, cumulatively across years 50% of intervals had GMs >244 CFU/100ml. *E. coli* data from both stations NepRWA\_MOB001 and W1949 & NepRWA\_MOB032 are indicative of an Escherichia Coli (E. Coli) impairment.

## Designated Use Attainment Decisions

## Fish Consumption

2024/26 Use Attainment	Alert
Not Supporting	NO

2024/26 Use Attainment Summary
<p>The Fish Consumption Use for Neponset River (MA73-01) continues to be assessed as Not Supporting and the prior PCBs in Fish Tissue and DDT in Fish Tissue impairments are being carried forward. MDPH included a site-specific advisory for Neponset River (referred to by MDPH as "Neponset River (between the Hollingsworth &amp; Vose Dam in Walpole and the Walter Baker Dam in Boston)") in their January 2025 Freshwater Fish Consumption Advisory List. The public should refer to the most recent MDPH Freshwater Fish Consumption Advisory List for the most up to date meal advice for sensitive and general populations.</p>

## Aesthetic

2024/26 Use Attainment	Alert
Not Supporting	NO

2024/26 Use Attainment Summary
<p>The Aesthetics Use for Neponset River (MA73-01) continues to be assessed as as Not Supporting with the prior Nutrient/Eutrophication Biological Indicators impairment being carried forward. MassDEP staff recorded aesthetics observations at four stations throughout this Neponset River AU during the summer's of 2017 and 2018 as part of the MassDEP Bacteria Source Tracking (BST) Project and a number of Special Projects. The station descriptions from upstream to downstream are as follows: close to the upstream end of the AU downstream/north of outlet of Crackrock Pond (north of North Street), Foxborough (W0533 in 2017 and 2018); in the downstream half of the AU ~850 feet downstream from railroad spur north at the Hollingsworth &amp; Vose Dam (NAT ID: MA03136), Walpole (W2737 in 2017); a little further downstream just upstream of the confluence with Hawes Brook, at the footbridge downstream/north of Hollingsworth and Vose, upstream/south of Morse Street, Norwood (W0543 in 2017 and 2018), and closer to the downstream end of the AU but still upstream of the confluence with Traphole Brook (W1933 in 2017). There were generally no persistent objectionable conditions (odors, deposits, growths, or turbidity) recorded at any of the stations, but the data were extremely limited (n=1-2/station/yr). However, Neponset River Watershed Association (NepRWA) did provide documentation during the 2016 public comment period for the Integrated Report that the Crack Rock Pond impoundment in this AU, continues to suffer from excess duckweed growth annually (up to 100% cover) and recent Google Earth images i.e. June 2015 and June 2019 (Google Earth Pro Undated) are consistent with this comment showing a dense coverage of floating and emergent vegetation; so the Aesthetic Use continues to be assessed as as impaired.</p>

## Monitoring Stations

Station Code	Organization	Type	Water Body	Station Description	Latitude	Longitude
W0533	MassDEP	Water Quality	Neponset River	[downstream/north of outlet of Crackrock Pond (north of North Street), Foxborough]	42.085924	-71.256688
W0543	MassDEP	Water Quality	Neponset River	[footbridge downstream/north of Hollingsworth and Vose, upstream/south of Morse Street, Norwood]	42.172694	-71.204985
W1933	MassDEP	Water Quality	Neponset River	[approximately 3200 feet downstream of Route 1, north of the eastern end of Vanderbilt Avenue, Norwood]	42.171871	-71.185944
W2737	MassDEP	Water Quality	Neponset River	[approximately 850 feet downstream from railroad spur north at the Hollingsworth & Vose Dam (NAT ID: MA03136), Walpole (at the Norwood town line)]	42.166680	-71.211223

### ***Aesthetic Observations***

#### **Aesthetics Summary Statements for MassDEP Stations (2011-2020)** (MassDEP Undated 6)

[Note: scums of natural origins (e.g. pollen blankets or natural foams) are excluded.]

Station Code	Data Year	Field Sheet Count	Aesthetics Summary Statement
W0533	2017	2	Aesthetic observations were made by MassDEP field sampling crews at Station W0533 on Neponset River (MA73-01) during 2 site visits between Oct 2017 and Dec 2017. There were generally no persistent objectionable conditions (odors, deposits, growths, or turbidity) recorded. However, aesthetic observations are limited (n<3).
W0533	2018	1	Aesthetic observations were made by MassDEP field sampling crews at Station W0533 on Neponset River (MA73-01) during 1 site visit on May 22, 2018. There were generally no persistent objectionable conditions (odors, deposits, growths, or turbidity) recorded, though field staff noted an aesthetics impairment flag (n=1). However, aesthetic observations are limited (n<3).
W0543	2017	2	Aesthetic observations were made by MassDEP field sampling crews at Station W0543 on Neponset River (MA73-01) during 2 site visits between Oct 2017 and Dec 2017. There were generally no persistent objectionable conditions (odors, deposits, growths, or turbidity) recorded. However, aesthetic observations are limited (n<3).
W0543	2018	1	Aesthetic observations were made by MassDEP field sampling crews at Station W0543 on Neponset River (MA73-01) during 1 site visit on May 22, 2018. There were generally no persistent objectionable conditions (odors, deposits, growths, or turbidity) recorded. However, aesthetic observations are limited (n<3).
W1933	2017	2	Aesthetic observations were made by MassDEP field sampling crews at Station W1933 on Neponset River (MA73-01) during 2 site visits between Aug 2017 and Oct 2017. There were generally no persistent objectionable conditions (odors, deposits, growths, or turbidity) recorded. However, aesthetic observations are limited (n<3).
W2737	2017	2	Aesthetic observations were made by MassDEP field sampling crews at Station W2737 on Neponset River (MA73-01) during 2 site visits between Aug 2017 and Oct 2017. There were generally no persistent objectionable conditions (odors, deposits, growths, or turbidity) recorded. However, aesthetic observations are limited (n<3).

## Primary Contact Recreation

2024/26 Use Attainment	Alert
Not Supporting	NO

2024/26 Use Attainment Summary
<p>The Primary Contact Recreation Use for the Neponset River (MA73-01) continues to be assessed as Not Supporting. The prior Escherichia Coli (E. Coli) impairment is being carried forward based on bacteria data not meeting the threshold at 3 stations in 2018-2022. The prior Nutrient/Eutrophication Biological Indicators impairment (from the Aesthetics Use) is also being carried forward. MassDEP and Neponset River Watershed Association (NepRWA) staff/volunteers collected <i>E. coli</i> bacteria samples in the Neponset River from 2011-2022 at 6 stations, with stations/sample years from upstream to downstream as follows: close to the upstream end at NepRWA_NER002 [at outlet of Crackrock Pond] from 2011-2014 &amp; 2017-2022 (n=5-6/yr), a third of the way down at NepRWA_NER040 [S. St] from 2011-2014 &amp; 2017-2022 (n=5-6/yr), two-thirds of the way down at NepRWA_NER075 [Hollingsworth &amp; Vose Dam] from 2011-2014 &amp; 2017-2022 (n=5-6/yr) &amp; W2737 [~850 ft downstream from railRd spur N at the Hollingsworth &amp; Vose Dam (T ID: MA03136), Walpole (Norwood town line)] from Aug-Oct 2017 (n=2), three-quarters of the way down at NepRWA_NER080 [Pleasant St Bridge] from 2011-2014 and 2017-2022 (n=4-6/yr), close to the downstream end at W1933 [~3200 ft downstream of Rt. 1, N of the eastern end of Vanderbilt Avenue, Norwood] from Aug-Oct 2017 (n=2). In general, at the upstream end of the AU (station NepRWA_NER002) the <i>E. coli</i> data is indicative of good water quality conditions, however water quality appears to worsen moving downstream.</p> <p>Analysis of the recent five years of the multi-year limited frequency dataset from NepRWA_NER002 indicated 0 out of 5 sufficient data yrs had intervals where &gt;20% of the GMs were &gt;126 CFU/100ml, 0 yrs had <math>\geq 2</math> samples exceed the 410 CFU/100ml STV and cumulatively across years 0% of intervals had GMs &gt;126 CFU/100ml. However, analysis of the recent five years of the multi-year limited frequency datasets from 3 other stations are as follows: NepRWA_NER040 indicated 5 out of 5 sufficient data yrs had intervals where &gt;20% of the GMs were &gt;126 CFU/100ml (2018-2022, 50-100%), 3 yrs had <math>\geq 2</math> samples exceed the 410 CFU/100ml STV (2018-2019 and 2022, n=2-3) and cumulatively 75% of intervals had GMs &gt;126 CFU/100ml; NepRWA_NER075 indicated 4 out of 5 sufficient data yrs had intervals where &gt;20% of the GMs were &gt;126 CFU/100ml (2018-2019 and 2021-2022, 50-100%), 1 yr had <math>\geq 2</math> samples exceed the 410 CFU/100ml STV (2018, n=2), and cumulatively 55% of intervals had GMs &gt;126 CFU/100ml; NepRWA_NER080 indicated 5 out of 5 sufficient data yrs had intervals where &gt;20% of the GMs were &gt;126 CFU/100ml (2018-2022, 100%), 2 yrs had <math>\geq 2</math> samples exceed the 410 CFU/100ml STV (2018 and 2022, n=3 &amp; 4) and cumulatively across years 100% of intervals had GMs &gt;126 CFU/100ml. <i>E. coli</i> data from stations W2737 and W1933 are too limited according to the 2024 CALM to assess the Primary Contact Recreation Use. Overall, while <i>E. coli</i> data from NepRWA_NER002 meet 2024 CALM guidance, the data from NepRWA_NER040, NepRWA_NER075, and NepRWA_NER080 are indicative of an Escherichia Coli (E. Coli) impairment.</p>

## Secondary Contact Recreation

<b>2024/26 Use Attainment</b>	<b>Alert</b>
Not Supporting	NO
<b>2024/26 Use Attainment Summary</b>	

The Secondary Contact Recreation Use for the Neponset River (MA73-01) continues to be assessed as Not Supporting. The prior Nutrient/Eutrophication Biological Indicators impairment (from the Aesthetics Use) is being carried forward. An Escherichia Coli (E. Coli) impairment is being added due to bacteria data not meeting the threshold at 4 stations (3 in 2018-2022 and 1 in 2017). MassDEP and Neponset River Watershed Association (NepRWA) staff/volunteers collected *E. coli* bacteria samples in both the historic (1997-2010) & the current IR window (2011-2022) in the Neponset River from 2008-2022 at 7 stations, with stations/sample years from upstream to downstream as follows: close to the upstream end at NepRWA\_NER002 [outlet of Crackrock Pond] from 2008-2010 (historic n=6/yr) as well as 2011-2014 & 2017-2022 (current n=5-6/yr), a third of the way down at NepRWA\_NER040 [S. St] from 2008-2010 (historic n=6/yr) as well as 2011-2014 & 2017-2022 (current n=5-6/yr), halfway down at W1943 [parking area crossing SE of the Robbins Rd, Rt. 27 intersection, Walpole] from Apr-Sep 2009 (n=5), two-thirds of the way down at NepRWA\_NER075 [Hollingsworth & Vose Dam] from 2008-2010 (historic n=5-6/yr) as well as 2011-2014 & 2017-2022 (current n=5-6/yr) & W2737 [~850 ft downstream from railRd spur N at the Hollingsworth & Vose Dam (T ID: MA03136), Walpole (Norwood town line)] from Aug-Oct 2017 (n=2), three-quarters of the way down at NepRWA\_NER080 [Pleasant St Bridge] from 2008-2010 (historic n=5-6/yr) as well as 2011-2014 & 2017-2022 (current n=4-6/yr), close to the downstream end at W1933 [~3200 ft downstream of Rt. 1, N of the eastern end of Vanderbuilt Ave, Norwood] from Apr-Sep 2009 (historic n=6) & Aug-Oct 2017 (current n=2). Only the analysis from the current IR window will be summarized here. In general, at the upstream end of the AU (station NepRWA\_NER002) the *E. coli* data is indicative of good water quality conditions, however water quality appears to worsen moving downstream. Analysis of the recent five years of the multi-year limited frequency *E. coli* dataset from NepRWA\_NER002 indicated 0 out of 5 sufficient data yrs had intervals where >20% of the GMs were >244 CFU/100ml, 0 yrs had  $\geq 2$  samples exceed the 794 CFU/100ml STV, and cumulatively across years 0% of intervals had GMs >244 CFU/100ml. However, analysis of the recent five years of the multi-year limited frequency datasets from 3 other stations are as follows: NepRWA\_NER040 indicated 4 out of 5 sufficient data yrs had intervals where >20% of the GMs were >244 CFU/100ml (2018-2020 and 2022, 75%) and while only 1 yr had  $\geq 2$  samples exceed the 794 CFU/100ml STV (2018, n=2) cumulatively across years 60% of intervals had GMs >244 CFU/100ml; NepRWA\_NER075 indicated 2 out of 5 sufficient data yrs had intervals where >20% of the GMs were >244 CFU/100ml (2018 and 2019, 75 & 50%) and while 0 yrs had  $\geq 2$  samples exceed the 794 CFU/100ml STV, cumulatively across years 22% of intervals had GMs >244 CFU/100ml; NepRWA\_NER080 indicated 5 out of 5 sufficient data yrs had intervals where >20% of the GMs were >244 CFU/100ml (2018-2022, 75-100%), and while just 2 yrs had  $\geq 2$  samples exceed the 794 CFU/100ml STV (2018 and 2022, n=2 & 2), cumulatively across years 80% of intervals had GMs >244 CFU/100ml. *E. coli* data from stations W2737 and W1933 are too limited according to the 2024 CALM to assess the Secondary Contact Recreation Use. Overall, while *E. coli* data from NepRWA\_NER002 meet 2024 CALM guidance, the data from NepRWA\_NER040, NepRWA\_NER075, and NepRWA\_NER080 in the current IR window are indicative of an Escherichia Coli (E. Coli) impairment.

## Monitoring Stations

Station Code	Organization	Type	Water Body	Station Description	Latitude	Longitude
W1933	MassDEP	Water Quality	Neponset River	[approximately 3200 feet downstream of Route 1, north of the eastern end of Vanderbilt Avenue, Norwood]	42.171871	-71.185944
W1943	MassDEP	Water Quality	Neponset River	[parking area crossing southeast of the Robbins Road, Route 27 intersection, Walpole]	42.147119	-71.255889
W2737	MassDEP	Water Quality	Neponset River	[approximately 850 feet downstream from railroad spur north at the Hollingsworth & Vose Dam (NAT ID: MA03136), Walpole (at the Norwood town line)]	42.166680	-71.211223

## Supporting Information for Removed Impairments

2022 Removed Impairment	Removal Reason	Removal Comment
Flocculant Masses	Data and/or information lacking to determine WQ status; original basis for listing was incorrect	The ADB impairment “Foam/Flocs/Scum/Oil Slicks” was previously applied to Neponset River (MA73-02) during the 2010 reporting cycle. Oil sheens/globs were noted associated with the sediments and in the water column in this Neponset River AU during a (MassDEP 1995) and later confirmed by MassDEP staff at the very downstream end of the AU at station W1934 (footbridge near eastern end of B Street, (Hyde Park) Boston) during summer 2009, where oily sheens and other kinds of scum were noted on numerous occasions (MassDEP Undated 9). The “Foam/Flocs/Scum/Oil Slicks” impairment code was subsequently divided into more specific codes and applied automatically to this AU for the final 2016 reporting cycle submittal to EPA’s new ATTAINS database. Since there was no mention of “Flocculant Masses” in the field observations, this impairment is being removed. The impairments for “Scum/foam” and “Oil and Grease” are being carried forward.

### Flocculant Masses

Please see removal comment above.

### Recommendations

2024/26 Recommendations
2024IR [Aesthetics, Medium] Conduct follow-up monitoring in Neponset River (MA73-02) at the footbridge near eastern end of B Street, (Hyde Park) Boston {W1934}, to evaluate whether objectionable trash and debris deposits, as well as oily sheens and high turbidity observed by MassDEP in 2009 have worsened or improved.

## Designated Use Attainment Decisions

### Fish Consumption

2024/26 Use Attainment	Alert
------------------------	-------

Not Supporting	NO
----------------	----

**2024/26 Use Attainment Summary**

The Fish Consumption Use for Neponset River (MA73-02) continues to be assessed as Not Supporting and the prior DDT in Fish Tissue and PCBs in Fish Tissue impairments are being carried forward. MDPH included a site-specific advisory for Neponset River (referred to by MDPH as "Neponset River (between the Hollingsworth & Vose Dam in Walpole and the Walter Baker Dam in Boston)") in their January 2025 Freshwater Fish Consumption Advisory List. The public should refer to the most recent MDPH Freshwater Fish Consumption Advisory List for the most up to date meal advice for sensitive and general populations.

**Aesthetic**

<b>2024/26 Use Attainment</b>	<b>Alert</b>
Not Supporting	NO

**2024/26 Use Attainment Summary**

The Aesthetics Use for Neponset River (MA73-02) continues to be assessed as as Not Supporting with the prior Scum/Foam, Debris, Turbidity, Oil and Grease and Trash impairments being carried forward. The Flocculant Masses impairment is being removed (see supporting information for removed impairments). MassDEP staff recorded aesthetics observations at four stations throughout this Neponset River AU during the summers of 2017 and 2018 as part of the Bacteria Source Tracking (BST) Project and a number of Special Projects. The station descriptions from upstream to downstream are as follows: close to the upstream end of the AU upstream/southwest of Neponset Street, Norwood (W0549 in 2017 (n=4) and 2018 (n=1)); about halfway down the AU at upstream/southwest of Dedham Street bridge, Canton (W0564 in 2017 and 2018, n=1-2); a little further downstream at Green Lodge Street, Canton (W0568 in 2017 and 2018, n=1-2) and about a mile from the downstream end of the AU at Neponset Valley Parkway, Boston (W2772 in 2017 and 2018, n=1-2). While there were generally no persistent objectionable conditions (odors, deposits, growths, or turbidity) recorded at any of the stations, the data were usually extremely limited and also were not collected from the station where the most serious incidences of trash, debris, oily sheens and high turbidity were observed in 2009 i.e. at the footbridge near eastern end of B Street, (Hyde Park) Boston (W1934), so there is not enough evidence to remove these impairments at this time. A recommendation will be made that additional aesthetic observations should be collected specifically at station W1934 to see if conditions have improved since 2009.

**Monitoring Stations**

Station Code	Organization	Type	Water Body	Station Description	Latitude	Longitude
W0549	MassDEP	Water Quality	Neponset River	[upstream/southwest of Neponset Street, Norwood]	42.168522	-71.167887
W0564	MassDEP	Water Quality	Neponset River	[upstream/southwest of Dedham Street bridge, Canton]	42.196965	-71.155152

Station Code	Organization	Type	Water Body	Station Description	Latitude	Longitude
W0568	MassDEP	Water Quality	Neponset River	[Green Lodge Street, Canton]	42.209231	-71.145952
W2772	MassDEP	Water Quality	Neponset River	[Neponset Valley Parkway, Boston]	42.234532	-71.122615

## ***Aesthetic Observations***

### **Aesthetics Summary Statements for MassDEP Stations (2011-2020)** (MassDEP Undated 6)

[Note: scums of natural origins (e.g. pollen blankets or natural foams) are excluded.]

Station Code	Data Year	Field Sheet Count	Aesthetics Summary Statement
W0549	2017	4	Aesthetic observations were made by MassDEP field sampling crews at Station W0549 on Neponset River (MA73-02) during 4 site visits between Aug 2017 and Dec 2017. There were generally no persistent objectionable conditions (odors, deposits, growths, or turbidity) recorded.
W0549	2018	1	Aesthetic observations were made by MassDEP field sampling crews at Station W0549 on Neponset River (MA73-02) during 1 site visit on May 22, 2018. There were generally no persistent objectionable conditions (odors, deposits, growths, or turbidity) recorded, though field staff noted an aesthetics impairment flag (n=1). However, aesthetic observations are limited (n<3).
W0564	2017	2	Aesthetic observations were made by MassDEP field sampling crews at Station W0564 on Neponset River (MA73-02) during 2 site visits between Oct 2017 and Dec 2017. There were generally no persistent objectionable conditions (odors, deposits, growths, or turbidity) recorded. During a probe deployment, field staff noted grey water color (n=1). However, aesthetic observations are limited (n<3).
W0564	2018	1	Aesthetic observations were made by MassDEP field sampling crews at Station W0564 on Neponset River (MA73-02) during 1 site visit on May 22, 2018. There were generally no persistent objectionable conditions (odors, deposits, growths, or turbidity) recorded. However, aesthetic observations are limited (n<3).
W0568	2017	2	Aesthetic observations were made by MassDEP field sampling crews at Station W0568 on Neponset River (MA73-02) during 2 site visits between Oct 2017 and Dec 2017. There were generally no persistent objectionable conditions (odors, deposits, growths, or turbidity) recorded. However, aesthetic observations are limited (n<3).
W0568	2018	1	Aesthetic observations were made by MassDEP field sampling crews at Station W0568 on Neponset River (MA73-02) during 1 site visit on May 22, 2018. There were generally no persistent objectionable conditions (odors, deposits, growths, or turbidity) recorded, though field staff noted an aesthetics impairment flag (n=1). However, aesthetic observations are limited (n<3).

Station Code	Data Year	Field Sheet Count	Aesthetics Summary Statement
W2772	2017	2	Aesthetic observations were made by MassDEP field sampling crews at Station W2772 on Neponset River (MA73-02) during 2 site visits between Oct 2017 and Dec 2017. There were generally no persistent objectionable conditions (odors, deposits, growths, or turbidity) recorded, though field staff noted grey water color (n=1). However, aesthetic observations are limited (n<3).
W2772	2018	1	Aesthetic observations were made by MassDEP field sampling crews at Station W2772 on Neponset River (MA73-02) during 1 site visit on May 22, 2018. There were generally no persistent objectionable conditions (odors, deposits, growths, or turbidity) recorded. However, aesthetic observations are limited (n<3).

## Primary Contact Recreation

2024/26 Use Attainment	Alert
Not Supporting	NO

2024/26 Use Attainment Summary
<p>The Primary Contact Recreation Use for the Neponset River (MA73-02) continues to be assessed as Not Supporting. The prior Escherichia Coli (E. Coli) impairment is being carried forward based on bacteria data not meeting the threshold at 2 stations in 2018-2022. The prior Fecal Coliform impairment is being carried forward and the prior Debris, Oil And Grease, Scum/Foam, Trash, and Turbidity impairments (from the Aesthetics Use) are also being carried forward. The Flocculant Masses impairment (from the Aesthetics Use) is being removed (see supporting information for removed impairments). MassDEP and Neponset River Watershed Association (NepRWA) staff/volunteers collected <i>E. coli</i> bacteria samples in this Neponset River AU from 2011-2022 at 3 stations. Samples were collected from the following stations/sample years from upstream to downstream: the upstream end of the AU at W0549 [upstream/southW of Neponset St, Norwood] from Aug-Oct 2017 (n=2), a third of the way down at NepRWA_NER125 [Neponset River at Dedham St Bridge] from 2011-2014 and 2017-2022 (n=5-6/yr) and three-quarters of the way down the AU at NepRWA_NER150 [Neponset River at Paul's Bridge] from 2011-2014 and 2017-2022 (n=5-6/yr). The available <i>E. coli</i> data at W0549 are too limited according to the 2024 CALM to assess the Primary Contact Recreation Use. Analysis of the recent five years of the multi-year limited frequency <i>E. coli</i> dataset from NepRWA_NER125 indicated 5 out of 5 sufficient data yrs had intervals where &gt;20% of the GMs were &gt;126 CFU/100ml (2018-2022, 50-100%) and while just 2 yrs had ≥2 samples exceed the 410 CFU/100ml STV (2018 and 2022, n=2 &amp; 2), cumulatively across years 70% of intervals had GMs &gt;126 CFU/100ml. Analysis of the recent five years of the multi-year limited frequency <i>E. coli</i> dataset from NepRWA_NER150 indicated 5 out of 5 sufficient data yrs had intervals where &gt;20% of the GMs were &gt;126 CFU/100ml (2018-2022, 75-100%) and while just 2 yrs had ≥2 samples exceed the 410 CFU/100ml STV (2018 and 2021, n=3 &amp; 2), cumulatively across years 90% of intervals had GMs &gt;126 CFU/100ml. The data from station NepRWA_NER150 and NepRWA_NER125 are indicative of an Escherichia Coli (E. Coli) impairment.</p>

## Secondary Contact Recreation

<b>2024/26 Use Attainment</b>	<b>Alert</b>
Not Supporting	NO
<b>2024/26 Use Attainment Summary</b>	

The Secondary Contact Recreation Use for the Neponset River (MA73-02) continues to be assessed as Not Supporting. The prior Debris, Flocculant Masses, Oil And Grease, Scum/Foam, Trash, and Turbidity impairments (from the Aesthetics Use) are being carried forward. An Escherichia Coli (E. Coli) impairment is being added due to bacteria data not meeting the threshold at 2 stations in 2018-2022. The Flocculant Masses impairment (from the Aesthetics Use) is being removed (see supporting information for removed impairments). MassDEP and Neponset River Watershed Association (NepRWA) staff/volunteers collected *E. coli* bacteria samples in both the historic (1997-2010) & the current IR window (2011-2022) in this Neponset River AU from 2008-2022 at 5 stations. Samples were collected from the following stations/sample years from upstream to downstream: the upstream end of the AU at W0549 [upstream/southW of Neponset St, Norwood] from Aug-Oct 2017 (n=2), a third of the way down at NepRWA\_NER125 [Neponset River at Dedham St Bridge] from 2008-2010 (historic n=6/yr) and 2011-2014 and 2017-2022 (current n=5-6/yr), halfway down at W0568 [Green Lodge St, Canton] from Apr-Sep 2009 (n=6), three-quarters of the way down the AU at NepRWA\_NER150 [Neponset River at Paul’s Bridge] from 2008-2010 (historic n=5-6/yr) and 2011-2014 and 2017-2022 (current n=5-6/yr), and close to the downstream end of the AU at W1934 [footbridge near eastern end of B St, (Hyde Park) Boston] from Apr-Sep 2009 (n=5). While some bacteria data from the historic IR window are indicative of good water quality conditions, these same locations were either indicative of poor quality conditions in the current IR window or the location was not sampled again in the current IR window, so only the analysis from the current IR window will be summarized here. The available *E. coli* data at station W0549 are too limited according to the 2024 CALM to assess the Secondary Contact Recreation Use. Analysis of the recent five years of this multi-year limited frequency *E. coli* dataset from NepRWA\_NER125 indicated 2 out of 5 sufficient data yrs had intervals where >20% of the GMs were >244 CFU/100ml (2018 and 2019, 100 & 75%), and while only 1 yr had ≥2 samples exceed the 794 CFU/100ml STV (2018, n=2) cumulatively across years 23% of intervals had GMs >244 CFU/100ml. Analysis of the recent five years of the multi-year limited frequency *E. coli* dataset from NepRWA\_NER150 indicated 4 out of 5 sufficient data yrs had intervals where >20% of the GMs were >244 CFU/100ml (2018-2019 and 2021-2022, 25-75%), and while only 1 yr had ≥2 samples exceed the 794 CFU/100ml STV (2018, n=2), cumulatively across years 45% of intervals had GMs >244 CFU/100ml. The data from NepRWA\_NER125 and NepRWA\_NER150 in the current IR window, are indicative of an Escherichia Coli (E. Coli) impairment.

## Supporting Information for Removed Impairments

2022 Removed Impairment	Removal Reason	Removal Comment
Flocculant Masses	Data and/or information lacking to determine WQ status; original basis for listing was incorrect	The ADB impairment “Foam/Flocs/Scum/Oil Slicks” was previously applied to Neponset River (MA73-03) during the 2010 reporting cycle. Oil sheens/globs were noted associated with the sediments and in the water column in this Neponset River AU during a 1994 MassDEP Neponset River Basin survey (MassDEP 1995) and later confirmed by MassDEP staff three-quarters of the way down the AU at station W1935 (~3000 feet east of Rt. 28, behind the baseball field off the western end of Meadowbank Avenue, (Mattapan) Boston) during summer 2009, where oily sheens and other kinds of scum were noted on numerous occasions (MassDEP Undated 9). The “Foam/Flocs/Scum/Oil Slicks” impairment code was subsequently divided into more specific codes and applied automatically to this AU for the final 2016 reporting cycle submittal to EPA’s new ATTAINS database. Since there was no mention of “Flocculant Masses” in the field observations, this impairment is being removed. The impairments for “Scum/foam” and “Oil and Grease” are being carried forward.

### Flocculant Masses

Please see removal comment above.

## Designated Use Attainment Decisions

### Fish Consumption

2024/26 Use Attainment	Alert
Not Supporting	NO
<b>2024/26 Use Attainment Summary</b>	

The Fish Consumption Use for Neponset River (MA73-03) continues to be assessed as Not Supporting and the prior DDT in Fish Tissue and PCBs in Fish Tissue impairment is being carried forward. MDPH included a site-specific advisory for Neponset River (referred to by MDPH as "Neponset River (between the Hollingsworth & Vose Dam in Walpole and the Walter Baker Dam in Boston)") in their January 2025 Freshwater Fish Consumption Advisory List. The public should refer to the most recent MDPH Freshwater Fish Consumption Advisory List for the most up to date meal advice for sensitive and general populations.

## Aesthetic

2024/26 Use Attainment	Alert
Not Supporting	NO

2024/26 Use Attainment Summary
<p>The Aesthetics Use for Neponset River (MA73-03) continues to be assessed as as Not Supporting with the prior Scum/Foam, Debris, Oil and Grease and Trash impairments being carried forward. The Flocculant Masses impairment is being removed (see supporting information for removed impairments). No new data are available to evaluate the Aesthetics Use for this Neponset River AU.</p>

## Primary Contact Recreation

2024/26 Use Attainment	Alert
Not Supporting	NO

2024/26 Use Attainment Summary

The Primary Contact Recreation Use for the Neponset River (MA73-03) continues to be assessed as Not Supporting. The prior Escherichia Coli (E. Coli) & Enterococcus impairments are being carried forward based on bacteria data not meeting the threshold at 5 stations between 2011 & 2022 & 2 stations between 2014 & 2022 respectively. The prior Fecal Coliform and Polychlorinated Biphenyls (PCBS) impairments are being carried forward & the prior Debris, Oil And Grease, Scum/Foam, & Trash impairments (from the Aesthetics Use) are also being carried forward. The Flocculant Masses impairment (from the Aesthetics Use) is being removed (see supporting information for removed impairments). Massachusetts Water Resources Authority (MWRA) & Neponset River Watershed Association (NepRWA) staff/volunteers collected *E. coli* (EC) & Enterococcus (Ent) bacteria samples from 2011-2022, at 5 stations/sample years from up to downstream as follows: Upstream end at NepRWA\_NER165 [Hyde Park Fairmount Ave] 2011-2014 (EC n=3-6/yr); halfway down at NepRWA\_NER179 [Brush Hill Rd] 2017-2022 (EC n=4-6/yr); three-quarters of the way down at NepRWA\_NER185 [Ryan Playground, Mattapan] 2011-2014 & 2017-2022 (EC n=5-6/yr); close to the downstream end at MWRA\_255 [downstream side of pedestrian foot bridge, mid-channel, 150 m upstream of site 055 & the Bake] 2019-2022 (EC & Ent n=9-16/yr); & downstream end at MWRA\_055 [above Baker Dam, Milton] 2011-2018 (EC & Ent n=14-16/yr). Analysis of the multi-year limited frequency *E. coli* data from NepRWA\_NER165 indicated 3 of 3 sufficient data yrs had intervals where >20% of the GMs were >126 CFU/100ml (2012-2014, 100%), 3 yrs had  $\geq 2$  samples exceed the 410 CFU/100ml STV (2012-2014, n=2-3) & cumulatively across years 100% of intervals had GMs >126 CFU/100ml. Analysis of the multi-year limited fq *E. coli* data from NepRWA\_NER179 indicated 5 of 5 sufficient data yrs had intervals where >20% of the GMs were >126 CFU/100ml (2017-2018 & 2020-2022, 33-100%) & while just 2 yrs had  $\geq 2$  samples exceed the 410 CFU/100ml STV (2018 & 2021, n=2 & 2), cumulatively 78% of intervals had GMs >126 CFU/100ml. Analysis of the recent 5 years of the multi-year limited fq *E. coli* data from NepRWA\_NER185 indicated 5 of 5 sufficient data yrs had intervals where >20% of the GMs were >126 CFU/100ml (2018-2022, 75-100%), 3 yrs had  $\geq 2$  samples exceed the 410 CFU/100ml STV (2018 and 2021-2022, n=2-3) & cumulatively 95% of intervals had GMs >126 CFU/100ml. Analysis of the multi-year high fq *E. coli* data from MWRA\_255 indicated 4 of 4 sufficient data yrs had intervals where >10% of the GMs were >126 CFU/100ml (2019-2022, 92-100%), 4 yrs had >10% of samples exceed the 410 CFU/100ml STV (2019-2022, 13-33%) & cumulatively 96% of intervals had GMs >126 CFU/100ml. Analysis of the recent five years of the multi-year high fq *E. coli* data from MWRA\_055 indicated 5 of 5 sufficient data yrs had intervals where >10% of the GMs were >126 CFU/100ml (2014-2018, 100%), 5 yrs had >10% of samples exceed the 410 CFU/100ml STV (2014-2018, 26-53%) & cumulatively 100% of intervals had GMs >126 CFU/100ml. Analysis of the multi-year high fq Enterococcus data from MWRA\_255 indicated 4 of 4 sufficient data yrs had intervals where >10% of the GMs were >35 CFU/100ml (2019-2022, 100%), 4 yrs had >10% of samples exceed the 130 CFU/100ml STV (2019-2022, 33-44%) & cumulatively 100% of intervals had GMs >35 CFU/100ml. Analysis of the recent 5 years of the multi-year high fq Enterococcus data from MWRA\_055 indicated 5 of 5 sufficient data yrs had intervals where >10% of the GMs were >35 CFU/100ml (2014-2018, 36-100%), 4 yrs had >10% of samples exceed the 130 CFU/100ml STV (2014 & 2016-2018, 18-42%) & cumulatively 78% of intervals had GMs >35 CFU/100ml. *E. coli* data from NepRWA\_NER165, NepRWA\_NER179,

MWRA\_255, MWRA\_055, & NepRWA\_NER185 & Enterococcus data from MWRA\_255 & MWRA\_055 are indicative of *E. coli* and Enterococcus impairments respectively.

### Monitoring Stations

Station Code	Organization	Type	Water Body	Station Description	Latitude	Longitude

## Secondary Contact Recreation

2024/26 Use Attainment	Alert
Not Supporting	NO
2024/26 Use Attainment Summary	

The Secondary Contact Recreation Use for the Neponset River (MA73-03) continues to be assessed as Not Supporting. The prior Debris, Oil And Grease, Scum/Foam, and Trash impairments (from the Aesthetics Use) are being carried forward. An Escherichia Coli (E. Coli) impairment is being added due to bacteria data not meeting the threshold at 5 stations/combined stations in 2011-2022. The Flocculant Masses impairment (from the Aesthetics Use) is being removed (see supporting information for removed impairments). MassDEP, Massachusetts Water Resources Authority (MWRA) & Neponset River Watershed Association (NepRWA) staff/volunteers collected *E. coli* bacteria samples in both the historic (1997-2010) & the current IR window (2011-2022) in this Neponset River AU, from 2002-2022 at 5 stations. Samples were collected from the following stations/sample years from upstream to downstream: Upstream end at NepRWA\_NER165 [Hyde Park Fairmount Avenue] from 2008-2010 (historic n=4-6/yr) & 2011-2014 (current n=3-6/yr); halfway down at NepRWA\_NER179 [at Brush Hill Rd] from 2017-2022 (n=4-6/yr); three-quarters of the way down at combined station W1935 & NepRWA\_NER185 [~3000 ft E of Rt. 28, behind the baseball field off the western end of Meadowbank Ave, (Mattapan) Boston & Ryan Playground, Mattapan] from 2008-2010 (historic n=5-9/yr) as well as 2011-2014 & 2017-2022 (current n=5-6/yr); close to the downstream end at MWRA\_255 [downstream side of pedestrian foot bridge, mid-channel, 150 m upstream of site 055 & the Bake] from 2018-2022 (n=2-26/yr); & downstream end at MWRA\_055 [above Baker Dam in Milton] from 2002-2010 (historic n=21-42/yr) & 2011-2018 (current n=23-26/yr). Overall, the *E. coli* data collected in both the historic & the current IR window for this Neponset River AU are all indicative of poor water quality conditions, but only the analysis from the current IR window will be summarized here: Analysis of the multi-year limited frequency *E. coli* dataset from NepRWA\_NER165 indicated 3 out of 3 sufficient data yrs had intervals where >20% of the GMs were >244 CFU/100ml (2012-2014, 50-100%), and while just 2 yrs had ≥2 samples exceed the 794 CFU/100ml STV (2012 and 2014, n=2 & 2), cumulatively across years 62% of intervals had GMs >244 CFU/100ml. Analysis of the multi-year limited frequency *E. coli* dataset from NepRWA\_NER179 indicated 5 out of 5 sufficient data yrs had intervals where >20% of the GMs were >244 CFU/100ml (2017-2018 and 2020-2022, 33-75%) and while 0 yrs had ≥2 samples exceed the 794 CFU/100ml STV, cumulatively across years 57% of intervals had GMs >244 CFU/100ml. Analysis of the recent five years of this multi-year limited frequency *E. coli* dataset from W1935 & NepRWA\_NER185 indicated 5 out of 5 sufficient data yrs had intervals where >20% of the GMs were >244 CFU/100ml (2018-2022, 75-100%) and while only 1 yr had ≥2 samples exceed the 794 CFU/100ml STV (2018, n=2), cumulatively across years 80% of intervals had GMs >244 CFU/100ml. Analysis of the multi-year high frequency *E. coli* dataset from MWRA\_255 indicated 4 out of 4 sufficient data yrs had intervals where >10% of the GMs were >244 CFU/100ml (2019-2022, 26-90%) and while just 2 yrs had >10% of samples exceed the 794 CFU/100ml STV (2020 and 2022, 20 & 15%), cumulatively across years 59% of intervals had GMs >244 CFU/100ml. Analysis of the recent five years of this multi-year high frequency *E. coli* dataset from MWRA\_055 indicated 5 out of 5 sufficient data yrs had intervals where >10% of the GMs were >244 CFU/100ml (2014-2018, 76-95%), 5 yrs had >10% of samples exceed the 794 CFU/100ml STV (2014-2018, 13-28%), and cumulatively across years 87% of intervals had GMs >244 CFU/100ml. The data from NepRWA\_NER165, NepRWA\_NER179, W1935 & NepRWA\_NER185, MWRA\_255, and MWRA\_055 in the current IR window, are all indicative of an Escherichia Coli (E. Coli) impairment.

## Monitoring Stations

Station Code	Organization	Type	Water Body	Station Description	Latitude	Longitude
MWRA_055	Massachusetts Water Resources Authority	Water Quality	Neponset River	Neponset River, above Baker Dam in Milton	42.270818	-71.068878

## Designated Use Attainment Decisions

### Fish Consumption

2024/26 Use Attainment	Alert
Not Supporting	NO

2024/26 Use Attainment Summary
The Fish Consumption Use for Neponset River (MA73-04) continues to be assessed as Not Supporting and the prior PCBs in Fish Tissue and Cause Unknown [Contaminants in Fish and/or Shellfish] impairment is being carried forward. MDPH included a site-specific advisory for Neponset River (referred to by MDPH as "Boston Harbor") in their 2017 Guide to Eating Fish Safely in Massachusetts. The public should refer to the most recent MDPH information for the most up to date meal advice for sensitive and general populations.

### Shellfish Harvesting

2024/26 Use Attainment	Alert
Not Supporting	NO

2024/26 Use Attainment Summary
Neponset River (MA73-04): The total of all shellfish growing area classifications (MassGIS, 2024) within this AU is 0.6359 sq mi (95%). The sum of the approved, conditionally approved, and restricted shellfish growing areas represents 0 sq mi (0%). The prohibited shellfish growing area represents 0.6359 sq mi (95%). There is insufficient information available to assess the Shellfish Harvesting Use because the growing areas within this AU are classified as entirely prohibited. There is insufficient information available to delist the existing Fecal Coliform impairment so the Shellfish Harvesting Use is evaluated as Not Supporting.

### Shellfish Growing Area Classifications

MassDFG-Division of Marine Fisheries Shellfish Growing Area Classification Data (MassGIS 2024) (MassDEP Undated 7)

Area Name	Waterbody/Area Description	Classification	Area (Sq. Mi.)	Area (% of AU)
GBH3.0	Dorchester Bay And Neponset River	Prohibited	0.42255	63.1%

Area Name	Waterbody/Area Description	Classification	Area (Sq. Mi.)	Area (% of AU)
GBH3.3	Buckley's Bar	Prohibited	0.00287	0.4%
GBH3.4	Neponset River	Prohibited	0.21051	31.4%

## Aesthetic

2024/26 Use Attainment	Alert
Not Supporting	NO

### 2024/26 Use Attainment Summary

The Aesthetics Use for Neponset River (MA73-04) continues to be assessed as as Not Supporting with the prior Turbidity, Debris and Trash impairments being carried forward. No new data are available to evaluate the Aesthetics Use for this Neponset Reservoir AU.

## Primary Contact Recreation

2024/26 Use Attainment	Alert
Not Supporting	NO

### 2024/26 Use Attainment Summary

The Primary Contact Recreation Use for the Neponset River (MA73-04) continues to be assessed as Not Supporting. The prior Enterococcus impairment is being carried forward based on MDPH Beach Closures data not meeting the threshold at 1 beach in 2018-2022 and bacteria data not meeting the threshold at 4 stations in 2018-2022. The prior Fecal Coliform impairment is being carried forward and the prior Debris, Trash, and Turbidity impairments (from the Aesthetics Use) are also being carried forward. Neponset River MDPH Beach Closure data for Tenean (DCR) beach [Beach ID: 2642] in Boston (located close to the downstream end of the AU on the west bank), indicated that this beach was posted for >10% of the swimming season in 2018 (42%), 2019 (67%), 2020 (48%), 2021 (63%), and 2022 (20%) indicating an Enterococcus impairment. The shellfish growing areas (0.6359 sq mi) in this AU are less than 100% approved (0 sq mi, 0%), which means that shellfish classification data were too limited to assess the Primary Contact Recreation Use of Neponset River. Surface water sampling was conducted at Tenean Beach on the Neponset River in Boston as part of a May 2022 MDPH study assessing 40 PFAS analytes in surface water and fish tissue samples collected from waterbodies in state parks. The average concentrations of the seven analytes with individual toxicity criteria (PFOA, PFOS, PFNA, PFHxS, PFBA, PFBS, HFPO-DA/GenX) were all less than the 90 ng/L (ppt) recreational screening value (maximum average 2.3 ng/L PFOS). Massachusetts Water Resources Authority (MWRA) staff/volunteers collected Enterococcus bacteria samples from 2011-2022 at 4 stations. Samples were collected from the following stations/sample years: halfway down the AU at MWRA\_054 [Neponset River, Granite Ave., near BOS095 (closed)] from 2011-2022 (n=17-26/yr); three-quarters of the way down at MWRA\_042 [Neponset River, between Neponset Ave and MBTA bridges] from 2011-2022 (n=17-24/yr); then close to the downstream end at MWRA\_089 [S Dorchester Bay, Neponset River, Commercial Point, Victory Rd. Park, BOS090 (closed)] from 2011-2022 (n=17-37/yr) and MWRA\_041 [S Dorchester Bay, Neponset River, Old Colony Yacht Club, near BOS090 (closed)] from 2011-2022 (n=17-24/yr). Analysis of the recent five years of the multi-year high frequency Enterococcus dataset from MWRA\_041 indicated 5 out of 5 sufficient data yrs had intervals where >10% of the GMs were >35 CFU/100ml (2018-2022, 15-70%), 4 yrs had >10% of samples exceed the 130 CFU/100ml STV (2018-2021, 10-23%), and cumulatively across years 43% of intervals had GMs >35 CFU/100ml. Analysis of the recent five years of this multi-year high frequency Enterococcus dataset from MWRA\_042 indicated 5 out of 5 sufficient data yrs had intervals where >10% of the GMs were >35 CFU/100ml (2018-2022, 12-77%), 3 yrs had >10% of samples exceed the 130 CFU/100ml STV (2020-2022, 17-36%), and cumulatively across years 51% of intervals had GMs >35 CFU/100ml. Analysis of the recent five years of this multi-year high frequency Enterococcus dataset from MWRA\_054 indicated 5 out of 5 sufficient data yrs had intervals where >10% of the GMs were >35 CFU/100ml (2018-2022, 65-100%), 5 yrs had >10% of samples exceed the 130 CFU/100ml STV (2018-2022, 17-63%), and cumulatively across years 82% of intervals had GMs >35 CFU/100ml. Analysis of the recent five years of this multi-year high frequency Enterococcus dataset from MWRA\_089 indicated 5 out of 5 sufficient data yrs had intervals where >10% of the GMs were >35 CFU/100ml (2018-2022, 80-100%), 5 yrs had >10% of samples exceed the 130 CFU/100ml STV (2018-2022, 29-63%), and cumulatively across years 89% of intervals had GMs >35 CFU/100ml. The data from MWRA\_041, MWRA\_042, MWRA\_054, and MWRA\_089 are indicative of an Enterococcus impairment.

## Monitoring Stations

Station Code	Organization	Type	Water Body	Station Description	Latitude	Longitude

**Shellfish Growing Area Classifications**

Summary Statement for MassDFG Shellfish Growing Area Classification Data (MassGIS 2024) (MassDEP Undated 7)

**Summary**

Neponset River (MA73-04): The total of all shellfish growing area classifications (MassGIS, 2024) within this AU is 0.6359 sq mi (95%). The approved shellfish growing area represents 0 sq mi (0%). Because the total of all shellfish growing area classifications is anything less than “approved”, the Primary Contact Recreational Use cannot be assessed for 2024 using the shellfish classification data.

**Other Indicators****Summary of MA DPH 2021 and 2022 PFAS in Water Column Data**

Data Sources: (MA DPH 2023a, MA DPH 2023b)

Surface water sampling was conducted at Tenean Beach on the Neponset River (MA73-04) in Boston as part of a May 2022 MA DPH study assessing 40 PFAS analytes in surface water and fish tissue samples collected from waterbodies in state parks. The average concentrations of the seven analytes with individual toxicity criteria (PFOA, PFOS, PFNA, PFHxS, PFBA, PFBS, HFPO-DA/GenX) were all less than the 90 ng/L (ppt) recreational screening value (maximum average 2.3 ng/L PFOS).

**Secondary Contact Recreation**

2024/26 Use Attainment	Alert
Not Supporting	NO

**2024/26 Use Attainment Summary**

The Secondary Contact Recreation Use for the Neponset River (MA73-04) continues to be assessed as Not Supporting. The prior Enterococcus impairment is being carried forward based on bacteria data not meeting the threshold at 4 stations in 2018-2022. The prior Fecal Coliform impairment is being carried forward and the prior Debris, Trash, and Turbidity impairments (from the Aesthetics Use) are also being carried forward. Neponset River has a beach with MDPH Beach Closure data: Tenean (DCR) beach [Beach ID: 2642] in Boston. Available MDPH Beach Closure data cannot be used to positively assess the Secondary Contact Recreation Use since beaches were posted for >10% of the swimming season every year from 2018-2022. The shellfish growing areas (0.6359 sq mi) in this AU are less than 100% approved (0 sq mi, 0%), which means that shellfish classification data were too limited to assess the Secondary Contact Recreation Use. Massachusetts Water Resources Authority (MWRA) staff/volunteers collected Enterococcus bacteria samples in both the historic (1997-2010) & the current IR window (2011-2022) in the Neponset River from 1997-2022 at 4 stations. Samples were collected from the following stations/sample years: halfway down the AU at MWRA\_054 [Neponset River, Granite Ave., near BOS095 (closed)] from 1997-2010 (historic n=13-24/yr) & 2011-2022 (current n=20-28/yr); three-quarters of the way down at MWRA\_042 [Neponset River, between Neponset Ave and MBTA bridges] from 1997-2010 (historic n=15-26/yr) and 2011-2022 (current n=20-26/yr); close to the downstream end at MWRA\_089 [S Dorchester Bay, Neponset River, Commercial Point, Victory Rd. Park, BOS090 (closed)] from 1997-2010 (historic n=22-50/yr) & 2011-2022 (current n=19-44/yr); and MWRA\_041 [S Dorchester Bay, Neponset River, Old Colony Yacht Club, near BOS090 (closed)] from 1997-2010 (historic n=16-26/yr) & 2011-2022 (current n=18-26/yr). While some bacteria data from the historic IR window are indicative of good water quality conditions, these same locations were indicative of poor quality conditions in the current IR window, so only the analysis from the current IR window will be summarized here. Analysis of the recent five years of the multi-year high frequency Enterococcus dataset from MWRA\_054 indicated 5 out of 5 sufficient data yrs had intervals where >10% of the GMs were >68 CFU/100ml (2018-2022, 22-100%), 3 yrs had >10% of samples exceed the 252 CFU/100ml STV (2018, 2020, and 2022, 10-25%), and cumulatively across years 57% of intervals had GMs >68 CFU/100ml. Analysis of the recent five years of the multi-year high frequency Enterococcus dataset from MWRA\_042 indicated 2 out of 5 sufficient data yrs had intervals where >10% of the GMs were >68 CFU/100ml (2020 and 2021, 60 & 40%) and while just 2 yrs had >10% of samples exceed the 252 CFU/100ml STV (2020 and 2022, 15 & 10%), cumulatively across years 21% of intervals had GMs >68 CFU/100ml. Analysis of the recent five years of the multi-year high frequency Enterococcus dataset from MWRA\_089 indicated 5 out of 5 sufficient data yrs had intervals where >10% of the GMs were >68 CFU/100ml (2018-2022, 54-93%), 5 yrs had >10% of samples exceed the 252 CFU/100ml STV (2018-2022, 20-50%), and cumulatively across years 76% of intervals had GMs >68 CFU/100ml. Analysis of the recent five years of this multi-year high frequency Enterococcus dataset from MWRA\_041 indicated 2 out of 5 sufficient data yrs had intervals where >10% of the GMs were >68 CFU/100ml (2018 and 2020, 38 & 27%), 3 yrs had >10% of samples exceed the 252 CFU/100ml STV (2018-2020, 10-22%), and cumulatively across years 13% of intervals had GMs >68 CFU/100ml. The data from MWRA\_041, MWRA\_042, MWRA\_054, and MWRA\_089 in the current IR window are all indicative of an Enterococcus impairment.

## Monitoring Stations

Station Code	Organization	Type	Water Body	Station Description	Latitude	Longitude

\*Samples = # of samples; SeasGM = Seasonal Geometric Mean (GM); #GMI = # of GM Intervals; #GMI Ex = # of GMI Exceedances;  
%GMI Ex = % GMI Exceedances; n>STV = # of samples > Statistical Threshold Value (STV); %n>STV = % of samples > STV;  
"Recent 5 Years" may not be consecutive as the analysis excludes years without GMI meeting the minimum sample size.

## Designated Use Attainment Decisions

### Fish Consumption

2024/26 Use Attainment	Alert
Not Assessed	NO

2024/26 Use Attainment Summary
Fish toxics sampling has not been conducted recently, so the Fish Consumption Use for Pecunit Brook (MA73-25) is Not Assessed.

### Aesthetic

2024/26 Use Attainment	Alert
Fully Supporting	NO

2024/26 Use Attainment Summary
The Aesthetics Use for Pecunit Brook (MA73-25) continues to be assessed as Fully Supporting based on the general lack of objectionable conditions observed by MassDEP staff during the summers of 2016-2018. MassDEP staff recorded aesthetics observations at one station halfway down Pecunit Brook, during the summers of 2016-2018 as part of the MassDEP Bacteria Source Tracking project (BST) and other special projects, upstream/southeast of Elm Street, Canton (W0565, n=2, 5 & 1 respectively). There were generally no noted objectionable conditions (odors, deposits, growths, or turbidity) recorded by field sampling crews, although staff noted significant trash deposits at this station in May 2018.

### Monitoring Stations

Station Code	Organization	Type	Water Body	Station Description	Latitude	Longitude
W0565	MassDEP	Water Quality	Pecunit Brook	[upstream/southeast of Elm Street, Canton]	42.188962	-71.144241

### Aesthetic Observations

#### Aesthetics Summary Statements for MassDEP Stations (2011-2020) (MassDEP Undated 6)

[Note: scums of natural origins (e.g. pollen blankets or natural foams) are excluded.]

Station Code	Data Year	Field Sheet Count	Aesthetics Summary Statement
W0565	2016	2	Aesthetic observations were made by MassDEP field sampling crews at Station W0565 on Pecunit Brook (MA73-25) during 2 site visits between Jul 2016 and Aug 2016. There were generally no persistent objectionable conditions (odors, deposits, growths, or turbidity) recorded. However, aesthetic observations are limited (n<3).
W0565	2017	5	Aesthetic observations were made by MassDEP field sampling crews at Station W0565 on Pecunit Brook (MA73-25) during 5 site visits between Jul 2017 and Dec 2017. There were generally no persistent objectionable conditions (odors, deposits, growths, or turbidity) recorded.
W0565	2018	1	Aesthetic observations were made by MassDEP field sampling crews at Station W0565 on Pecunit Brook (MA73-25) during 1 site visit on May 22, 2018. There were generally no persistent objectionable conditions (odors, deposits, growths, or turbidity) recorded, though field staff noted an aesthetics impairment flag (n=1). However, aesthetic observations are limited (n<3).

## Primary Contact Recreation

2024/26 Use Attainment	Alert
Not Supporting	NO

2024/26 Use Attainment Summary
<p>The Primary Contact Recreation Use for Pecunit Brook (MA73-25) continues to be assessed as Not Supporting. The prior Escherichia Coli (E. Coli) impairment is being carried forward based on bacteria data not meeting the threshold at 1 combined station in 2018-2022. MassDEP and NepRWA staff/volunteers collected <i>E. coli</i> bacteria samples halfway down Pecunit Brook at combined station W0565 &amp; NepRWA_PEB008 [upstream/SE of Elm St, Canton &amp; Elm St, Canton] from 2011-2022 (n=5-9/yr). Analysis of the recent five years of the multi-year limited frequency <i>E. coli</i> dataset from W0565 &amp; NepRWA_PEB008 indicated 5 out of 5 sufficient data yrs had intervals where &gt;20% of the GMs were &gt;126 CFU/100ml (2018-2022, 50-100%) and while just 2 yrs had ≥2 samples exceed the 410 CFU/100ml STV (2018 and 2022, n=3 &amp; 4), cumulatively across years 77% of intervals had GMs &gt;126 CFU/100ml, which is indicative of an Escherichia Coli (E. Coli) impairment.</p>

**Secondary Contact Recreation**

<b>2024/26 Use Attainment</b>	<b>Alert</b>
Not Supporting	NO

**2024/26 Use Attainment Summary**

The Secondary Contact Recreation Use for Pecunit Brook (MA73-25) is assessed as Not Supporting. An Escherichia Coli (E. Coli) impairment is being added due to bacteria data not meeting the threshold at 1 combined station in 2018-2022. MassDEP and NepRWA staff/volunteers collected *E. coli* bacteria samples in both the historic (1997-2010) & the current IR window (2011-2022) in Pecunit Brook from 2006-2022 at 2 stations. Samples were collected from the following stations/sample years from upstream to downstream: halfway down the brook at combined station W0565 & NepRWA\_PEB008 [upstream/SE of Elm St, Canton & Elm St, Canton] from 2006-2010 (historic n=4-6/yr) and 2011-2022 (current n=5-9/yr), and three-quarters of the way down at W1948 [~360 ft upstream of Interstate 95, Canton] from Apr-Sep 2009 (historic n=6). Since bacteria data from the historic IR window are all indicative of good water quality conditions, only the analysis from the current IR window (1 combined station) will be summarized here. Analysis of the recent five years of the multi-year limited frequency *E. coli* dataset from W0565 & NepRWA\_PEB008 indicated 5 out of 5 sufficient data yrs had intervals where >20% of the GMs were >244 CFU/100ml (2018-2022, 25-100%) and while just 2 yrs had ≥2 samples exceed the 794 CFU/100ml STV (2018 and 2022, n=2 & 4), cumulatively across years 55% of intervals had GMs >244 CFU/100ml, which is indicative of an Escherichia Coli (E. Coli) impairment.

## Designated Use Attainment Decisions

### Fish Consumption

2024/26 Use Attainment	Alert
Not Assessed	NO

2024/26 Use Attainment Summary
Fish toxics sampling has not been conducted recently, so the Fish Consumption Use for Pequid Brook (MA73-22) is Not Assessed.

### Aesthetic

2024/26 Use Attainment	Alert
Fully Supporting	NO

2024/26 Use Attainment Summary
The Aesthetics Use for Pequid Brook (MA73-22) continues to be assessed as as Fully Supporting based on the general lack of objectionable conditions observed by MassDEP staff throughout the AU during summer 2013. MassDEP staff recorded aesthetics observations at four stations in Canton on Pequid Brook, during the summer of 2013 as part of the MassDEP Bacteria Source Tracking project. These stations are described from upstream to downstream as follows: close to the upstream end of the AU at York Street (W0560, n=2), a little further downstream at Del Pond Drive (W2422, n=2), at the outlet of Reservoir Pond, downstream at Pleasant Street (W2426, n=2) and close to the downstream end of the AU at Sherman Street (W0559, n=2). There were generally no noted objectionable conditions (odors, deposits, growths, or turbidity) recorded by field sampling crews at any of the stations.

### Monitoring Stations

Station Code	Organization	Type	Water Body	Station Description	Latitude	Longitude
W0559	MassDEP	Water Quality	Pequid Brook	[Sherman Street, Canton]	42.158634	-71.139934
W0560	MassDEP	Water Quality	Pequid Brook	[York Street, Canton]	42.176704	-71.095818
W2422	MassDEP	Water Quality	Pequid Brook	[Del Pond Drive, Canton]	42.172268	-71.112251
W2426	MassDEP	Water Quality	Pequid Brook	[outlet Reservoir Pond, downstream at Pleasant Street, Canton]	42.168037	-71.133801

## Aesthetic Observations

### Aesthetics Summary Statements for MassDEP Stations (2011-2020) (MassDEP Undated 6)

[Note: scums of natural origins (e.g. pollen blankets or natural foams) are excluded.]

Station Code	Data Year	Field Sheet Count	Aesthetics Summary Statement
W0559	2013	2	Aesthetic observations were made by MassDEP field sampling crews at Station W0559 on Pequid Brook (MA73-22) during 2 site visits between Jun 2013 and Aug 2013. There were generally no persistent objectionable conditions (odors, deposits, growths, or turbidity) recorded, though field staff noted high turbidity (n=1). However, aesthetic observations are limited (n<3).
W0560	2013	2	Aesthetic observations were made by MassDEP field sampling crews at Station W0560 on Pequid Brook (MA73-22) during 2 site visits between Jun 2013 and Aug 2013. There were generally no persistent objectionable conditions (odors, deposits, growths, or turbidity) recorded. However, aesthetic observations are limited (n<3).
W2422	2013	2	Aesthetic observations were made by MassDEP field sampling crews at Station W2422 on Pequid Brook (MA73-22) during 2 site visits between Jun 2013 and Aug 2013. There were generally no persistent objectionable conditions (odors, deposits, growths, or turbidity) recorded. However, aesthetic observations are limited (n<3).
W2426	2013	2	Aesthetic observations were made by MassDEP field sampling crews at Station W2426 on Pequid Brook (MA73-22) during 2 site visits between Jun 2013 and Aug 2013. There were generally no persistent objectionable conditions (odors, deposits, growths, or turbidity) recorded. However, aesthetic observations are limited (n<3).

## Primary Contact Recreation

2024/26 Use Attainment	Alert
Not Supporting	NO

### 2024/26 Use Attainment Summary

The Primary Contact Recreation Use for Pequid Brook (MA73-22) is assessed as Not Supporting. An Escherichia Coli (E. Coli) impairment is being added due to bacteria data not meeting the threshold at 2 stations/combined stations in 2018-2022. MassDEP and NepRWA staff/volunteers collected *E. coli* bacteria samples in Pequid Brook in 2011-2022 at 4 stations. Samples were collected from the following stations/sample years from upstream to downstream: close to the upstream end of the brook at W0560 [York St, Canton] from Jun-Aug 2013 (n=2), a little further downstream (just upstream of Reservoir Pond) at W2422 & NepRWA\_PQB036 [Del Pond Drive, Canton & Del Pond Drive] from 2011-2014 and 2017-2022 (n=4-8/yr), just downstream of the pond at W2426 [outlet Reservoir Pond, downstream at Pleasant St, Canton] from Jun-Aug 2013 (n=2), and close to the downstream end of the AU at W0559 & NepRWA\_PQB040 [Sherman St, Canton] from 2011-2014 and 2017-2022 (n=5-8/yr). The available *E. coli* data at W0560 and W2426 are too limited to assess the Primary Contact Recreation Use according to the 2024 CALM. However, analysis of the recent five years of this multi-year limited frequency *E. coli* dataset from W2422 & NepRWA\_PQB036 indicated 5 out of 5 sufficient data yrs had intervals where >20% of the GMs were >126 CFU/100ml (2018-2022, 75-100%), 4 yrs had  $\geq 2$  samples exceed the 410 CFU/100ml STV (2018-2019 and 2021-2022, n=3), and cumulatively across years 83% of intervals had GMs >126 CFU/100ml. Analysis of the recent five years of this multi-year limited frequency *E. coli* dataset from W0559 & NepRWA\_PQB040 indicated 5 out of 5 sufficient data yrs had intervals where >20% of the GMs were >126 CFU/100ml (2018-2022, 75-100%), 3 yrs had  $\geq 2$  samples exceed the 410 CFU/100ml STV (2020-2022, n=2-4), and cumulatively across years 83% of intervals had GMs >126 CFU/100ml. *E. coli* data from W2422 & NepRWA\_PQB036 and W0559 & NepRWA\_PQB040 are indicative of an Escherichia Coli (E. Coli) impairment.

## Summary Statement for 2011-2019 MassDEP Bacteria Source Tracking (BST) Data (MassDEP Undated 1)

<b>Summary</b>
BST work was conducted in 2013 on the Pequid Brook AU (MA73-22). E.coli concentrations ranged 23 to 308MPN. No correctable sources were ever found.

**Secondary Contact Recreation**

<b>2024/26 Use Attainment</b>	<b>Alert</b>
Not Supporting	NO

<b>2024/26 Use Attainment Summary</b>
<p>The Secondary Contact Recreation Use for Pequid Brook (MA73-22) is assessed as Not Supporting. An Escherichia Coli (E. Coli) impairment is being added due to bacteria data not meeting the threshold at 2 stations/combined stations in 2018-2022. MassDEP and NepRWA staff/volunteers collected <i>E. coli</i> bacteria samples in both the historic (1997-2010) &amp; the current IR window (2011-2022) in Pequid Brook from 2008-2022 at 4 stations. Samples were collected from the following stations/sample years from upstream to downstream: close to the upstream end of the brook at W0560 [York St, Canton] from Jun-Aug 2013 (n=2), a little further downstream (just upstream of Reservoir Pond) at W2422 &amp; NepRWA_PQB036 [Del Pond Drive, Canton &amp; Del Pond Drive] from 2008-2010 (historic n=4-6/yr) and 2011-2014 and 2017-2022 (current n=4-8/yr), just downstream of the pond at W2426 [outlet Reservoir Pond, downstream at Pleasant St, Canton] from Jun-Aug 2013 (n=2) and close to the downstream end of the AU at W0559 &amp; NepRWA_PQB040 [Sherman St, Canton] from 2008-2010 (historic n=5-12/yr) and 2011-2014 and 2017-2022 (current n=5-8/yr). The available <i>E. coli</i> data at W0560 and W2426 are too limited to assess the Secondary Contact Recreation Use according to the 2024 CALM. However, analysis of the recent five years of the multi-year limited frequency <i>E. coli</i> dataset from W2422 &amp; NepRWA_PQB036 indicated 4 out of 5 sufficient data yrs had intervals where &gt;20% of the GMs were &gt;244 CFU/100ml (2018-2019 and 2021-2022, 75-100%), 3 yrs had ≥2 samples exceed the 794 CFU/100ml STV (2018-2019 and 2022, n=2-3), and cumulatively across years 75% of intervals had GMs &gt;244 CFU/100ml. Analysis of the recent five years of the multi-year limited frequency <i>E. coli</i> dataset from W0559 &amp; NepRWA_PQB040 indicated 5 out of 5 sufficient data yrs had intervals where &gt;20% of the GMs were &gt;244 CFU/100ml (2018-2022, 50-100%), 3 yrs had ≥2 samples exceed the 794 CFU/100ml STV (2020-2022, n=2-4), and cumulatively across years 77% of intervals had GMs &gt;244 CFU/100ml. <i>E. coli</i> data from W2422 &amp; NepRWA_PQB036 and W0559 &amp; NepRWA_PQB040 are indicative of an Escherichia Coli (E. Coli) impairment. It should be noted that data in the historic IR window at station W0559 &amp; NepRWA_PQB040 was also indicative of an Escherichia Coli (E. Coli) impairment, with 21% cumulatively of the GM intervals &gt;244 CFU/100ml for this multi-year low frequency dataset.</p>

**Monitoring Stations**

Station Code	Organization	Type	Water Body	Station Description	Latitude	Longitude

4a	4a	Mercury in Fish Tissue	42408	Unchanged

Impairment	Source (Confirmed Y/N)	ALU	FC	AES	PCR	SCR
Mercury in Fish Tissue	Atmospheric Deposition (Y)	--	X	--	--	--
Mercury in Fish Tissue	Source Unknown (N)	--	X	--	--	--

## Designated Use Attainment Decisions

### Fish Consumption

2024/26 Use Attainment	Alert
Not Supporting	NO

2024/26 Use Attainment Summary
The Fish Consumption Use for Pettee Pond (MA73036) continues to be assessed as Not Supporting and the prior Mercury in Fish Tissue impairment is being carried forward. MDPH included a site-specific advisory for Pettee Pond in their January 2025 Freshwater Fish Consumption Advisory List. The public should refer to the most recent MDPH Freshwater Fish Consumption Advisory List for the most up to date meal advice for sensitive and general populations.

## Aesthetic

2024/26 Use Attainment	Alert
Not Assessed	NO

2024/26 Use Attainment Summary
No data are available, so the Aesthetics Use for Pettee Pond (MA73036) is Not Assessed.

## Primary Contact Recreation

2024/26 Use Attainment	Alert
Not Assessed	NO

2024/26 Use Attainment Summary
No bacteria or other indicator data for Pettee Pond (MA73036) are available, so the Primary Contact Recreation Use is Not Assessed.

## Secondary Contact Recreation

2024/26 Use Attainment	Alert
Not Assessed	NO

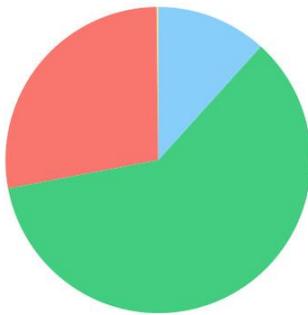

2024/26 Use Attainment Summary
No bacteria or other indicator data for Pettee Pond (MA73036) are available in the current IR window (2011-2022), so the Secondary Contact Recreation Use is Not Assessed.

# Pine Tree Brook (MA73-29)

## Supporting Information for Removed Impairments

2022 Removed Impairment	Removal Reason	Removal Comment
Aquatic Plants (Macrophytes)	Data and/or information lacking to determine WQ status; original basis for listing was incorrect	<p>As described in detail in the 2024 CALM guidance document the mapping of Aquatic Plants (Macrophytes) impairments as a pollutant is being reevaluated. Pine Tree Brook (MA73-29) includes the run-of-river impoundment, Popes Pond (formerly MA73044), that was first listed as impaired for Noxious Aquatic Plants in 1996, and this cause was remapped to Aquatic Plants (Macrophytes) during the 2010 IR cycle (MassDEP 2024). In 2012, the impairment was applied to the river AU when the two were merged. The original pond impairment was based on an August 1994 synoptic survey conducted by MassDEP staff in which it was noted that the observation site had a 75-100% density of the non-rooted, submerged species, <i>Ceratophyllum echinatum</i> (MassDEP 1994, MassDEP 2002). Most Google Earth images of Popes Pond since 2010 show plant coverages &lt;25% (Google Earth Pro Undated). Popes Pond comprises only ~5.5% of the length of the Pine Tree Brook AU, since this impounded portion of the Pine Tree Brook "river" AU comprises &lt;10% of the total AU river length, the Aquatic Plants (Macrophytes) impairment should be delisted because the impounded area is not considered to well represent the AU.</p>

### Aquatic Plants (Macrophytes)

1996 WBS Coding Sheet for Popes Pond (formerly MA73044) (MassDEP 2002):

WBID: **MA73044** WATERSHED: Neponset (73) (Printed 02/03/98)  
 NAME: Popes Pond TYPE: Lake/Pond  
 CODE: 73044 SIZE: 13.00(acres) CLASS: B

LATITUDE: 42.24861  
 LONGITUDE: 71.09639 (421455/710547)  
 Lake/Pond Name: Popes Pond, Milton  
 Ecoregion Name: ()  
 Description:

Assessment Date: 9609 Begin Sampling: 9408 303(d) List?: Yes  
 Cycle: 96 End Sampling: 9408 Pathogens Only?: No

**Lake Specific Information**

Lake size greater than 10 acres?: Yes  
 Significantly Publicly Owned: xxxx  
 Trophic Status: Hypereutrophic  
 Trophic Trend: Unknown  
 Acidity/Toxics Trend: Unknown  
 Acidity Effects: Unknown

Uses	Support	Threat	Partial	Non-Sup	Not-Asses	Not-Attain
OVERALL USE SUPPORT			13.00			
ALUS					13.00	
FISH CONSUMPTION					13.00	
PRIMARY CONTACT			13.00			
SECONDARY CONTACT			13.00			
Aesthetics					13.00	

**Nonattainment Causes**

Code	Size	Magnitude	"New" Code	Size	Magnitude
2200- Noxious aquatic plants	6.50	M			
2500- Turbidity	6.50	M

9000- SOURCE UNKNOWN	13.00	M			

**Assessment Type**

(Assessment Category => Monitored)  
 R35- Primary Producer Surveys | "New" Assessment Category => M E NA

**Media/Pollutants Assessed**

(Toxics Monitoring => N) | "New" Toxics Monitoring => YES or NO

**Comments:**

1996:  
 A 9 AUGUST 1994 SYNOPTIC SURVEY INDICATES THAT FLOATING LEAF AND EMERGENT PLANTS ARE NOT COMMON (< 5% COVERAGE). COONTAIL IS ABUNDANT - DENSITY IS 75% TO 100% AT OBSERVATION SITE. TURBIDITY WAS A CAUSE OF USE IMPAIRMENT TO THE POND AS THE SECCHI DISK READING WAS ONLY ABOUT 1 FOOT. THE WATER WAS TURBID AND VERY BROWN. NO OTHER DATA WAS AVAILABLE TO MAKE ASSESSMENTS.

Entered  
9/9/94

9/22/94

Lake/Pond Popes Pond Date 8-9-94

Town/City Milton Observers Adyner

De Cassie

Location/type of access (be specific, e.g., public boat ramp at west cove area off Simpson Street):

SW end of Pond off Summer Street (House No. 124) \*  
Property behind No. 124 leads to path along west  
side of Pond. No sign posted.

\* Blue Hills Parkway

Ownership of Location/Access (specify public or private, name of owner(s), and any use restrictions):

Unknown

Posted signs (re aquatic plants, fish advisories, access, etc.):

None observed

Water quality observations (clarity, dissolved organic staining, blooms, et cetera):

Turbid

Brown (Disgustingly so!)

Secchi much < 4 feet (w 1 foot)

Record of aquatic plant "species" observed (see note below):

x ~~Ligustrum salicaria~~

Potamogeton cordata

Ceratophyllum echinatum (most common plant)

Potamogeton (narrow-leaf species, but nearly dead)

Peltandra

Observed aquatic plant density (at observation site and across lake or pond, if practicable):

floating leaf & emergent plants are not common ( $\leq 5\%$  cover)

✓ Ceratium is abundant - density is 75-100% at observation sites

Other notes (e.g., overt pollution, construction, and water uses):

margin of pond forested

305b - Hyper eutrophic

1° Contact - 100% Partial support

2° Contact - 100% " "

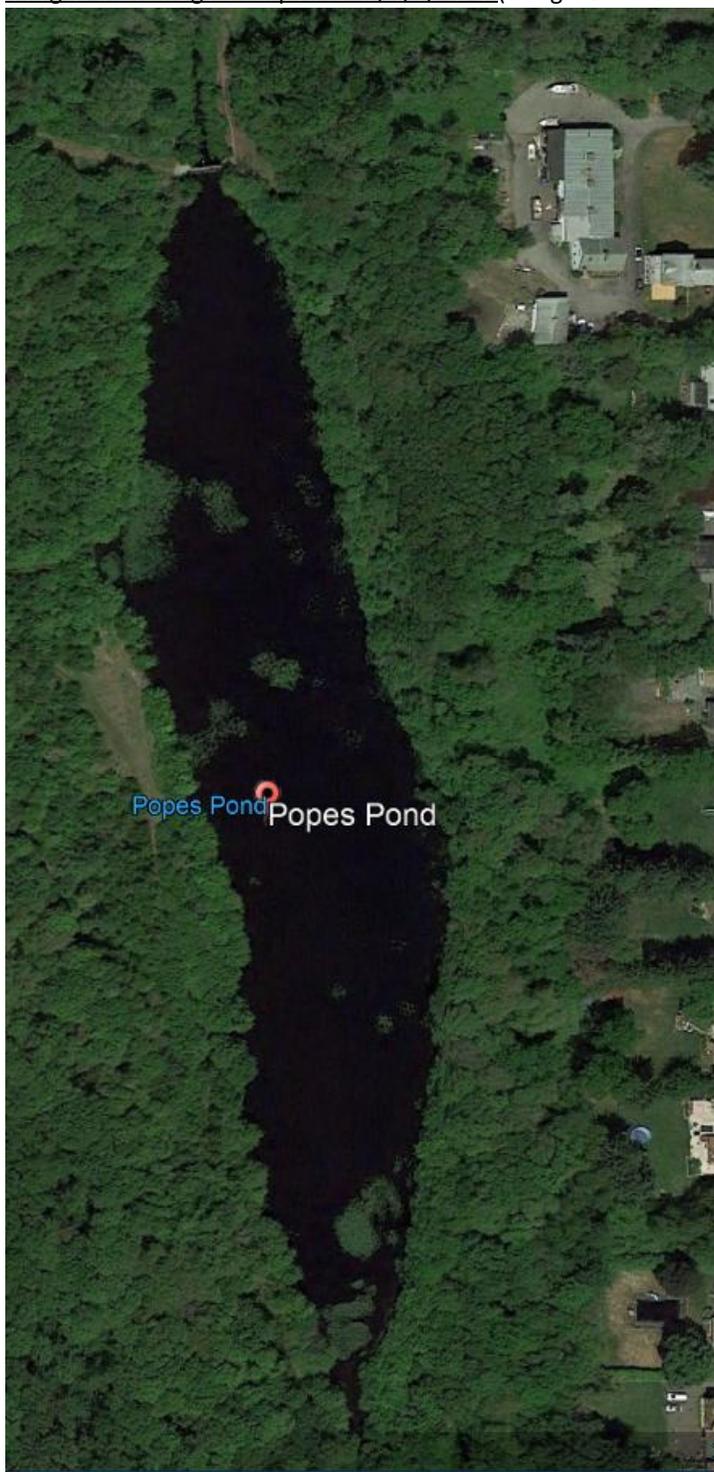

Causes - Turbidity - M (50% average) Noxious plants - M (50% average)

Note: record suspect M. heterophyllum plants that may require confirmation once emergent flowering stalks are evident.

Google Earth image of Popes Pond, 8/24/2013 (Google Earth Pro Undated);

Google Earth image of Popes Pond, 6/6/2015 (Google Earth Pro Undated):

MassDEP staff did not observe excessive filamentous algae during summer 2009 at Pine Tree Brook, water quality station W0573 (Eliot Street crossing, Milton) (MassDEP Undated 2).

Nutrient Relate Data

Unique ID	Water Body	Count.x	NH4 Violations	Year	Count	TP Average	TP Max	Field Sheets	Filamentous Dense or Very Dense	Max Daily DO Shift	Max Saturation
W0573	PINE TREE BROOK	5	0	2009	5	0.034	0.077	6	0	2.9	112

## Recommendations

### 2024/26 Recommendations

2024/2026 IR[Turbidity, Medium] Conduct follow-up sampling in Pine Tree Brook (MA73-29) within the Popes Pond impoundment i.e. upstream of Bluehills Parkway and station {W0575}, to evaluate the status of the Turbidity impairment to the Aesthetics and Recreational uses. The Popes Pond impoundment specifically has not been observed by MassDEP staff since the 1994 synoptic survey. An aesthetics survey is recommended for the Popes Pond impoundment, to see if water quality conditions have improved since 1994. This is a medium priority

2024/2026 IR [Aquatic Plants (Macrophytes), Medium] Conduct follow-up sampling in Pine Tree Brook (MA73-29) at Unquity Road (near Harland Street), Milton {W0576} to determine the status of the dense and very dense macrophytes in this area. An Alert was identified for Aquatic Plants (Macrophytes) in 2006 due to the dense macrophytes observed at this site. At this time there is insufficient information to remove the Alert.

## Designated Use Attainment Decisions

### Fish Consumption

2024/26 Use Attainment	Alert
Not Assessed	NO

### 2024/26 Use Attainment Summary

Fish toxics sampling has not been conducted recently, so the Fish Consumption Use for Pine Tree Brook (MA73-29) is Not Assessed.

### Aesthetic

2024/26 Use Attainment	Alert
Not Supporting	YES

### 2024/26 Use Attainment Summary

The Aesthetics Use for Pine Tree Brook (MA73-29) continues to be assessed as Not Supporting, with the prior Turbidity impairment being carried forward. The prior impairment for Aquatic Plants (Macrophytes) is being removed, however the prior Alert identified for Aquatic Plants (Macrophytes) at Unquity Road (near Harland Street), Milton is being maintained. As described in detail in the 2024 CALM guidance document the mapping of Aquatic Plants (Macrophytes) impairments as a pollutant is being reevaluated. Pine Tree Brook includes the run-of-river impoundment, Popes Pond (formerly MA73044), that was first listed as impaired for Noxious Aquatic Plants in 1996, and this cause was remapped to Aquatic Plants (Macrophytes) during the 2010 IR cycle (MassDEP 2024). In 2012, the impairment was applied to the river AU when the two were merged. The original pond impairment (for Turbidity) was based on an August 1994 synoptic survey conducted by MassDEP staff, during which it was also noted that the observation site had a 75-100% density of the non-rooted, submerged species “Coontail” *Ceratophyllum echinatum* (MassDEP 1994, MassDEP 2002). However, most Google Earth images of Popes Pond since 2010 show plant coverages <25% (Google Earth Pro Undated). Popes Pond comprises only ~5.5% of the length of the Pine Tree Brook AU and since this impounded portion of the Pine Tree Brook “river” AU comprises <10% of the total AU river length, the Aquatic Plants (Macrophytes) impairment is being delisted because the impounded area is not considered to well represent the riverine AU. However, since the Popes Pond impoundment specifically has not been observed by MassDEP staff since the 1994 synoptic survey, there is insufficient information to delist the Turbidity impairment at this time. An aesthetics survey is recommended for the Popes Pond impoundment, to see if water quality conditions have improved since 1994. Additionally MassDEP staff recorded aesthetics observations a third of the way down the AU (about a quarter mile upstream of Popes Pond) ~500 feet upstream/south from Canton Ave, Milton (W2385), between May and September 2013 (n=8). There were generally no persistent objectionable conditions (odors, deposits, growths, or turbidity) recorded, though field staff noted grey water color on one occasion and trash on eight occasions. The prior Alert identified for Aquatic Plants (Macrophytes), due to dense and very dense macrophytes observed at Unquity Road (near Harland Street), Milton (W0576) in 2006, is being maintained since there is insufficient information to remove the Alert.

### Monitoring Stations

Station Code	Organization	Type	Water Body	Station Description	Latitude	Longitude
W2385	MassDEP	Water Quality	Pine Tree Brook	[approximately 500 feet upstream/south from Canton Avenue, Milton]	42.243430	-71.094378

### Aesthetic Observations

#### Aesthetics Summary Statements for MassDEP Stations (2011-2020) (MassDEP Undated 6)

[Note: scums of natural origins (e.g. pollen blankets or natural foams) are excluded.]

Station Code	Data Year	Field Sheet Count	Aesthetics Summary Statement
W2385	2013	8	Aesthetic observations were made by MassDEP field sampling crews at Station W2385 on Pine Tree Brook (MA73-29) during 8 site visits between May 2013 and Sep 2013. There were generally no persistent objectionable conditions (odors, deposits, growths, or turbidity) recorded, though field staff noted grey water color (n=1) and objectionable deposits (n=8).

### Primary Contact Recreation

2024/26 Use Attainment	Alert
Not Supporting	NO

2024/26 Use Attainment Summary

The Primary Contact Recreation Use for Pine Tree Brook (MA73-29) continues to be assessed as Not Supporting. The prior Escherichia Coli (E. Coli) impairment is being carried forward based on bacteria data not meeting the threshold at 4 stations in 2018-2022. The prior Fecal Coliform impairment is being carried forward and the prior Turbidity impairment (from the Aesthetics Use) is also being carried forward. Since the Aquatic Plants (Macrophytes) impairment is being removed from the Aesthetics Use this cycle, this impairment is also being removed from the Primary Contact Recreation Use. The prior Alert for Aquatic Plants (Macrophytes) is being removed from the Recreational Uses but continues to be maintained under the Aesthetics Use. MassDEP and NepRWA staff/volunteers collected *E. coli* bacteria samples in Pine Tree Brook from 2011-2022 at 5 stations. Samples were collected from the following stations/sample years from upstream to downstream: a quarter of the way down the AU at NepRWA\_UTP013 [Unnamed Tributary of Pine Tree Brook at Harland St, Milton] from 2019-2020 (n=6-8/yr), a third of the way down at W2385 [~500 ft upstream/S from Canton Avenue, Milton] from May-Sep 2013 (n=5), halfway down at NepRWA\_PTB028 [Blue Hills Parkway, Milton] from 2011-2014 and 2017-2022 (n=5-6/yr), three-quarters of the way down at NepRWA\_PTB035 [Brook Rd, Milton] from 2011-2014 and 2017-2022 (n=4-6/yr) and the downstream end of the AU at NepRWA\_PTB047 [Central Avenue, Milton] from 2011-2014 and 2017-2022 (n=4-6/yr). While *E. coli* data from station W2385 meets 2024 CALM guidance, *E. coli* data from the other 4 stations are all indicative of poor water quality and are summarized as follows; Analysis of the multi-year moderate frequency dataset from NepRWA\_UTP013 indicated 2 out of 2 sufficient data yrs had intervals where >20% of the GMs were >126 CFU/100ml (2019 and 2020, 80 & 75%), 2 yrs had  $\geq 2$  samples exceed the 410 CFU/100ml STV (2019 and 2020, n=3 & 2), and cumulatively across years 78% of intervals had GMs >126 CFU/100ml. Analysis of the recent five years of the multi-year limited frequency dataset from NepRWA\_PTB028 indicated 4 out of 5 sufficient data yrs had intervals where >20% of the GMs were >126 CFU/100ml (2018-2021, 50-75%), 3 yrs had  $\geq 2$  samples exceed the 410 CFU/100ml STV (2019 and 2021-2022, n=2-3), and cumulatively across years 53% of intervals had GMs >126 CFU/100ml. Analysis of the recent five years of the multi-year limited frequency dataset from both NepRWA\_PTB035 & NepRWA\_PTB047 indicated 5 out of 5 sufficient data yrs had intervals where >20% of the GMs were >126 CFU/100ml (2018-2022, 100%), 5 yrs had  $\geq 2$  samples exceed the 410 CFU/100ml STV (2018-2022, n=3-5), and cumulatively across years 100% of intervals had GMs >126 CFU/100ml. The data from NepRWA\_UTP013, NepRWA\_PTB035, NepRWA\_PTB028, and NepRWA\_PTB047 are indicative of an Escherichia Coli (E. Coli) impairment.

**Secondary Contact Recreation**

<b>2024/26 Use Attainment</b>	<b>Alert</b>
Not Supporting	NO
<b>2024/26 Use Attainment Summary</b>	

The Secondary Contact Recreation Use for Pine Tree Brook (MA73-29) continues to be assessed as Not Supporting. The prior Turbidity impairment (from the Aesthetics Use) is being carried forward. An Escherichia Coli (E. Coli) impairment is being added due to bacteria data not meeting the threshold at 4 stations in 2018-2022. Since the Aquatic Plants (Macrophytes) impairment is being removed from the Aesthetics Use this cycle, this impairment is also being removed from the Secondary Contact Recreation Use. The prior Alert for Aquatic Plants (Macrophytes) is being removed from the Recreational Uses but continues to be maintained under the Aesthetics Use. MassDEP and NepRWA staff/volunteers collected *E. coli* bacteria samples in both the historic (1997-2010) & the current IR window (2011-2022) in Pine Tree Brook from 2006-2022 at 8 stations. Samples were collected from the following stations/sample years from upstream to downstream: a quarter of the way down the AU at NepRWA\_UTP013 [Unnamed Tributary of Pine Tree Brook at Harland St, Milton] from 2019-2020 (n=6-8/yr) & W0576 [Unquity Rd (near Harland St), Milton] from May-Aug 2006 (n=5), a third of the way down at W2385 [~500 ft upstream/S from Canton Avenue, Milton] from May-Sep 2013 (n=5), halfway down at combined station W0575 & NepRWA\_PTB028 [Blue Hills Parkway, Milton] in 2006 & 2008-2010 (historic n=5-6/yr) as well as 2011-2014 & 2017-2022 (current n=5-6/yr), three-quarters of the way down at NepRWA\_PTB035 [Brook Rd, Milton] from 2008-2010 (historic n=6/yr) as well as 2011-2014 & 2017-2022 (current n=4-6/yr), & W0574 [Central Avenue, Milton] from May-Aug 2006 (n=5), close to the downstream end at W1624 [School St, Milton] in Aug 2006 (n=1) & the downstream end of the AU at combined station W0573 & NepRWA\_PTB047 [Eliot St crossing, (Milton Village) Milton & Central Avenue, Milton] in 2006 & 2008-2010 (historic n=1-11/yr) as well as 2011-2014 & 2017-2022 (current n=4-6/yr). While *E. coli* data from station W2385 meets 2024 CALM guidance, *E. coli* data from the 4 other stations/combined stations with data in the current IR window, are all indicative of poor water quality and are summarized as follows; Analysis of the multi-year moderate frequency dataset from NepRWA\_UTP013 indicated 2 out of 2 sufficient data yrs had intervals where >20% of the GMs were >244 CFU/100ml (2019 and 2020, 30 & 25%), 1 yr had  $\geq 2$  samples exceed the 794 CFU/100ml STV (2019, n=3), and cumulatively across years 28% of intervals had GMs >244 CFU/100ml. Analysis of the recent five years of this multi-year limited frequency dataset from W0575 & NepRWA\_PTB028 indicated 4 out of 5 sufficient data yrs had intervals where >20% of the GMs were >244 CFU/100ml (2018-2021, 25-50%), 3 yrs had  $\geq 2$  samples exceed the 794 CFU/100ml STV (2019 and 2021-2022, n=2), and cumulatively across years 40% of intervals had GMs >244 CFU/100ml. Analysis of the recent five years of the multi-year limited frequency dataset from both NepRWA\_PTB035 & combined station W0573 & NepRWA\_PTB047 indicated 5 out of 5 sufficient data yrs had intervals where >20% of the GMs were >244 CFU/100ml (2018-2022, 100%), 4 yrs had  $\geq 2$  samples exceed the 794 CFU/100ml STV (2018-2019 and 2021-2022, n=2-4), and cumulatively across years 100% of intervals had GMs >244 CFU/100ml. *E. coli* data from stations NepRWA\_UTP013, W0575 & NepRWA\_PTB028, NepRWA\_PTB035, and W0573 & NepRWA\_PTB047 are all indicative of an Escherichia Coli (E. Coli) impairment.

### **Monitoring Stations**

Station Code	Organization	Type	Water Body	Station Description	Latitude	Longitude

<b>2024/26 Use Attainment</b>	<b>Alert</b>
Not Assessed	NO

<b>2024/26 Use Attainment Summary</b>
---------------------------------------

Fish toxics sampling has not been conducted recently, so the Fish Consumption Use for Pinewood Pond (MA73039) is Not Assessed.

## Aesthetic

2024/26 Use Attainment	Alert
Not Supporting	NO

### 2024/26 Use Attainment Summary

The Aesthetics Use for Pinewood Pond (MA73039) continues to be assessed as as Not Supporting with the Aquatic Plants (Macrophytes) impairment being carried forward. Since the Non-Native Aquatic Plants impairment was redundantly duplicated across multiple uses for this waterbody, the Non-Native Aquatic Plants impairment is being removed from the Aesthetics Use but will continue to be maintained under the Aquatic Life Use. No new data are available to evaluate the Aesthetics Use for Pinewood Pond.

## Primary Contact Recreation

2024/26 Use Attainment	Alert
Not Supporting	NO

### 2024/26 Use Attainment Summary

No bacteria or other indicator data for Pinewood Pond (MA73039) are available, so the Primary Contact Recreation Use continues to be assessed as Not Supporting. The prior Aquatic Plants (Macrophytes) impairment (from the Aesthetics Use) is being carried forward. Since the Non-Native Aquatic Plants impairment is being removed from the Aesthetics Use this cycle, this impairment is also being removed from the Primary Contact Recreation Use.

## Secondary Contact Recreation

2024/26 Use Attainment	Alert
Not Supporting	NO

### 2024/26 Use Attainment Summary

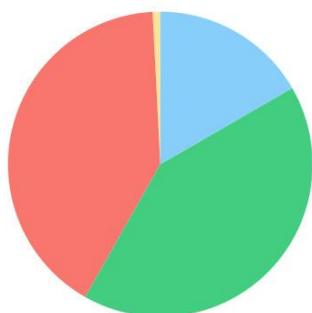

No bacteria or other indicator data for Pinewood Pond (MA73039) are available in the current IR window (2011-2022), so the Secondary Contact Recreation Use continues to be assessed as Not Supporting. The prior Aquatic Plants (Macrophytes) impairment (from the Aesthetics Use) is being carried forward. Since the Non-Native Aquatic Plants impairment is being removed from the Aesthetics Use this cycle, this impairment is also being removed from the Secondary Contact Recreation Use.

## Designated Use Attainment Decisions

### Fish Consumption

2024/26 Use Attainment	Alert
Not Assessed	NO

2024/26 Use Attainment Summary
Fish toxics sampling has not been conducted recently, so the Fish Consumption Use for Plantingfield Brook (MA73-23) is Not Assessed.

### Aesthetic

2024/26 Use Attainment	Alert
Not Assessed	NO

2024/26 Use Attainment Summary
No data are available, so the Aesthetics Use for Plantingfield Brook (MA73-23) is Not Assessed.

### Primary Contact Recreation

2024/26 Use Attainment	Alert
Not Supporting	NO

2024/26 Use Attainment Summary

The Primary Contact Recreation Use for Plantingfield Brook (MA73-23) continues to be assessed as Not Supporting. The prior Escherichia Coli (E. Coli) impairment is being carried forward based on bacteria data not meeting the threshold at 1 station in 2019-2020. Neponset River Watershed Association (NepRWA) staff/volunteers collected *E. coli* bacteria samples a third of the way down Plantingfield Brook at NepRWA\_PFB023 [Tech Drive, Norwood] from 2019-2020 (n=4-8/yr). Analysis of the multi-year moderate frequency dataset from this station indicated 2 out of 2 sufficient data yrs had intervals where >20% of the GMs were >126 CFU/100ml (2019 and 2020, 60 & 100%), and while 0 yrs had ≥2 samples exceed the 410 CFU/100ml STV, cumulatively across years 63% of intervals had GMs >126 CFU/100ml, which is indicative of an Escherichia Coli (E. Coli) impairment. MassDEP staff conducted Bacteria Source Tracking (BST) work in 2013 & 2015-2018 on the Plantingfield Brook. Initially BST work focused on a stormdrain outfall pipe draining the Alpine/Ash St area, due to a history of concern over the water quality there; the Town of Norwood assisted with up-pipe investigations. In 2016 sewer lines on Springvale and Alpine road were CIPP lined, however follow up sampling at the pipe in 2017 indicated elevated *E. coli* concentrations with a max of 1,733 MPN/100ml (though this was vastly improved compared to 2015, when a max of 19,863 MPN was observed). It was concluded that a minor intermittent source of bacteria still exists in the Alpine/Ash drainage area. A baseline sample was collected close to the downstream end of the AU (at Rt. 1) in 2018, with a dry weather *E. coli* concentration of 770 MPN documented.

**Summary Statement for 2011-2019 MassDEP Bacteria Source Tracking (BST) Data (MassDEP Undated 1)**

Summary
BST work was conducted in 2013, 2015-2018 on the Plantingfield Brook AU (MA73-23). Initially BST work focused on a stormdrain outfall pipe draining the Alpine/Ash St area, due to a history of concern over the water quality there; the Town of Norwood assisted with up-pipe investigations. In 2016 sewer lines on Springvale and Alpine road were CIPP lined, however follow up sampling at the pipe in 2017 indicated elevated concentrations with a max of 1,733MPN (though this was vastly improved compared to 2015, when a max of 19,863MPN was observed). It was concluded that a minor intermittent source of bacteria still exists in the Alpine/Ash drainage area. A baseline sample was collected close to the bottom of the AU at Rt.1 in 2018 with a dry weather E.coli concentration of 770MPN.

**Secondary Contact Recreation**

2024/26 Use Attainment	Alert
Not Supporting	NO

**2024/26 Use Attainment Summary**

The Secondary Contact Recreation Use for Plantingfield Brook (MA73-23) continues to be assessed as Not Supporting. The prior Escherichia Coli (E. Coli) impairment is being carried forward based on bacteria data not meeting the threshold at 1 station in 2009. MassDEP and Neponset River Watershed Association (NepRWA) staff/volunteers collected *E. coli* bacteria samples in both the historic (1997-2010) & the current IR window (2011-2022) in Plantingfield Brook from 2009-2020 at 2 stations. Samples were collected from the following stations/sample years from upstream to downstream: a third of the way down the brook at NepRWA\_PFB023 [Tech Drive, Norwood] from 2019-2020 (n=4-8/yr) and close to the downstream end at W1947 [Rt. 1, Norwood] from Apr-Sep 2009 (historic n=5). Analysis of the multi-year moderate frequency *E. coli* dataset from NepRWA\_PFB023 indicated 1 out of 2 sufficient data yrs had intervals where >20% of the GMs were >244 CFU/100ml (2019, 20%), 0 yrs had ≥2 samples exceed the 794 CFU/100ml STV and cumulatively across years 18% of intervals had GMs >244 CFU/100ml, which meets 2024 CALM guidance. However, analysis of the historic single year limited frequency *E. coli* dataset from W1947 indicated 100% of intervals had GMs >244 CFU/100ml, 3 samples exceeded the 794 CFU/100ml STV, and the overall GM was 793 CFU/100ml, which is indicative of an Escherichia Coli (E. Coli) impairment. While recent data at station NepRWA\_PFB023 indicated generally good conditions, data in the historic window (1997-2010) from station W1947 are indicative of poor water quality conditions with an Escherichia Coli (E. Coli) impairment and there are no recent data (i.e. from the current window (2011-2022)) available to assess this location. MassDEP staff conducted Bacteria Source Tracking (BST) work in 2013 & 2015-2018 on the Plantingfield Brook. Initially BST work focused on a stormdrain outfall pipe draining the Alpine/Ash St area, due to a history of concern over the water quality there; the Town of Norwood assisted with up-pipe investigations. In 2016 sewer lines on Springvale and Alpine road were CIPP lined, however follow up sampling at the pipe in 2017 indicated elevated *E. coli* concentrations with a max of 1,733 MPN/100ml (though this was vastly improved compared to 2015, when a max of 19,863 MPN was observed). It was concluded that a minor intermittent source of bacteria still exists in the Alpine/Ash drainage area. A baseline sample was collected close to the downstream end of the AU (at Rt.1) in 2018, with a dry weather *E. coli* concentration of 770 MPN documented.

## Designated Use Attainment Decisions

### Fish Consumption

2024/26 Use Attainment	Alert
Not Supporting	NO

2024/26 Use Attainment Summary
The Fish Consumption Use for Ponkapoag Pond (MA73043) continues to be assessed as Not Supporting and the prior Mercury in Fish Tissue impairment is being carried forward. MDPH included a site-specific advisory for Ponkapoag Pond in their January 2025 Freshwater Fish Consumption Advisory List. The public should refer to the most recent MDPH Freshwater Fish Consumption Advisory List for the most up to date meal advice for sensitive and general populations.

### Aesthetic

2024/26 Use Attainment	Alert
Not Supporting	NO

2024/26 Use Attainment Summary

The Aesthetics Use for Ponkapoag Pond (MA73043) is assessed as Not Supporting based on observations made by MassDEP staff in 2017. An Aquatic Plants (Macrophytes) impairment is being added. MassDEP staff recorded aesthetics observations as part of the MAP2 wadeable streams monitoring project in summer 2017 at two stations in Canton/Randolph for Ponkapoag Pond, at the southern end of pond near the boat ramp north of Randolph Street (W2703/MAP2L-159S, n=5), and at the deep hole index station (W2097/MAP2L-159, n=3). There were generally no persistent objectionable conditions (odors, deposits, growths, or turbidity) recorded, or littoral zone duckweed recorded in the ten shoreline plots observed for the MAP2 littoral survey (n=1). However, during the MAP2 macrophyte mapping survey in August 2017 (n=1), greater than 25% (53.7%) of the waterbody was determined to have an aquatic macrophyte biovolume >50%, which is indicative of an impairment and this survey also noted an aesthetics impairment flag due to aquatic plants (macrophytes).

W2097	MassDEP	Water Quality	Ponkapoag Pond	[deep hole, Randolph]	42.192183	-71.092968
W2703	MassDEP	Water Quality	Ponkapoag Pond	[southern end of pond, at boat ramp north of Randolph Street, Canton]	42.188380	-71.093558

### Aesthetic Observations

#### Aesthetics Summary Statements for MassDEP Stations (2011-2020) (MassDEP Undated 6)

[Note: scums of natural origins (e.g. pollen blankets or natural foams) are excluded.]

Station Code	Data Year	Field Sheet Count	Aesthetics Summary Statement
W2097	2017	3	Aesthetic observations were made by MassDEP field sampling crews at Station W2097 (MAP2L-159) on Ponkapoag Pond (MA73043) during 3 site visits between Jun 2017 and Aug 2017. There were generally no persistent objectionable conditions (odors, deposits, growths, or turbidity) recorded. During the MAP2 macrophyte mapping survey (n=1) in Aug 2017, greater than 25% (53.7%) of the waterbody was determined to have an aquatic macrophyte biovolume >50% and the survey also noted an aesthetics impairment flag due to aquatic plants (macrophytes). The observations from the MAP2 survey are indicative of an Aesthetics Use impairment.
W2703	2017	5	Aesthetic observations were made by MassDEP field sampling crews at Station W2703 (MAP2L-159S) on Ponkapoag Pond (MA73043) during 5 site visits between May 2017 and Sep 2017. There were generally no persistent objectionable conditions (odors, deposits, growths, or turbidity) recorded. During the MAP2 littoral survey (n=1), duckweed was not noted in any of the 10 shoreline plots.

## Primary Contact Recreation

<b>2024/26 Use Attainment</b>	<b>Alert</b>
Not Supporting	NO

## 2024/26 Use Attainment Summary

The Primary Contact Recreation Use for Ponkapoag Pond (MA73043) is assessed as Not Supporting. An Aquatic Plants (Macrophytes) impairment is being added (from the Aesthetics Use). In 2017 MassDEP staff collected Secchi depth and cyanobacteria cell count data at W2097 [MAP2L-159, Index-deep hole] and cyanobacteria cell count and cyanotoxin data at W2703 [MAP2L-159S, Shoreline at southern end of pond, at boat ramp N of Randolph St, Canton]. At station W2097 (station depth=2.27 m) the Secchi depth measurements ranged from 2-2.27 m (n=3) indicating water clarity meeting the 1.2 m (4 ft) threshold. The cyanobacteria cell count did not exceed 70,000 cells/ml in any of the water samples in 2017 (n=6). Analysis of microcystins and cylindrospermopsin samples from W2703 in 2017 (n=6) indicated that the cyanotoxin concentrations did not exceed their respective thresholds of 8 µg/L and 15 µg/L. In addition, MassDEP staff collected *E. coli* bacteria samples in Ponkapoag Pond at W2703 from May-Sep 2017 (n=5). Analysis of the single year limited frequency dataset from this station indicated 0% of intervals had GMs >126 CFU/100ml, no samples exceeded the 410 CFU/100ml STV and the seasonal GM was 33 CFU/100ml, which meets 2024 CALM guidance.

## Recommendations

2024/26 Recommendations
2024IR [Aquatic Plants (Macrophytes), Low] Conduct follow-up site visits in this Ponkapog Brook AU (MA73-27) in particular at Elm Street, Canton {W0566} to evaluate the status of the dense and very dense aquatic plant growth identified during summer 2016 and 2017 surveys.

## Designated Use Attainment Decisions

### Fish Consumption

2024/26 Use Attainment	Alert
Not Assessed	NO

2024/26 Use Attainment Summary
Fish toxics sampling has not been conducted recently, so the Fish Consumption Use for Ponkapog Brook (MA73-27) is Not Assessed.

### Aesthetic

2024/26 Use Attainment	Alert
Fully Supporting	YES

2024/26 Use Attainment Summary

The Aesthetics Use for Ponkapog Brook (MA73-27) continues to be assessed as Fully Supporting based on the general lack of objectionable conditions observed by MassDEP staff during the summers of 2016-2018. An Alert is being identified for Aquatic Plants (Macrophytes) due the observations of dense and very dense plant growth at one station in 2016 and 2017. MassDEP staff recorded aesthetics observations at one station three-quarters of the way down Ponkapog Brook, during the summers of 2016-2018 as part of the Bacteria Source Tracking (BST) project and other special projects, at Elm Street, Canton (W0566, n=2, 5 & 1 respectively). There were generally no noted objectionable conditions (odors, deposits, growths, or turbidity) recorded by field sampling crews, although staff noted dense and very dense aquatic plants at this station in 2016 (n=2) and 2017 (n=3). Additional monitoring will be recommended to determine if these dense plants impair the Use of Ponkapog Brook.

### Monitoring Stations

Station Code	Organization	Type	Water Body	Station Description	Latitude	Longitude
W0566	MassDEP	Water Quality	Ponkapog Brook	[Elm Street, Canton]	42.203234	-71.135018

### Aesthetic Observations

#### Aesthetics Summary Statements for MassDEP Stations (2011-2020) (MassDEP Undated 6)

[Note: scums of natural origins (e.g. pollen blankets or natural foams) are excluded.]

Station Code	Data Year	Field Sheet Count	Aesthetics Summary Statement
W0566	2016	2	Aesthetic observations were made by MassDEP field sampling crews at Station W0566 on Ponkapog Brook (MA73-27) during 2 site visits between Jul 2016 and Aug 2016. There were generally no persistent objectionable conditions (odors, deposits, growths, or turbidity) recorded, though field staff noted dense/very dense aquatic plants (n=2). However, aesthetic observations are limited (n<3).
W0566	2017	5	Aesthetic observations were made by MassDEP field sampling crews at Station W0566 on Ponkapog Brook (MA73-27) during 5 site visits between Jul 2017 and Dec 2017. There were generally no persistent objectionable conditions (odors, deposits, growths, or turbidity) recorded, though field staff noted dense/very dense aquatic plants (n=3).
W0566	2018	1	Aesthetic observations were made by MassDEP field sampling crews at Station W0566 on Ponkapog Brook (MA73-27) during 1 site visit on May 22, 2018. There were generally no persistent objectionable conditions (odors, deposits, growths, or turbidity) recorded. However, aesthetic observations are limited (n<3).

## Primary Contact Recreation

2024/26 Use Attainment	Alert
Not Supporting	NO

2024/26 Use Attainment Summary
<p>The Primary Contact Recreation Use for Ponkapog Brook (MA73-27) continues to be assessed as Not Supporting. The prior Escherichia Coli (E. Coli) impairment is being carried forward based on bacteria data not meeting the threshold at 1 combined station in 2018-2022. The prior Fecal Coliform impairment is also being carried forward. MassDEP and Neponset River Watershed Association (NepRWA) staff/volunteers collected <i>E. coli</i> bacteria samples three-quarters of the way down Ponkapog Brook at W0566 &amp; NepRWA_POB040 [Elm St, Canton &amp; Elm St, Canton] from 2011-2014 and 2016-2022 (n=2-9/yr). Analysis of the recent five years of the multi-year limited frequency dataset from this station indicated 5 out of 5 sufficient data yrs had intervals where &gt;20% of the GMs were &gt;126 CFU/100ml (2018-2022, 75-100%), 3 yrs had ≥2 samples exceed the 410 CFU/100ml STV (2018-2019 and 2022, n=2-3), and cumulatively across years 90% of intervals had GMs &gt;126 CFU/100ml, which is indicative of an Escherichia Coli (E. Coli) impairment.</p>

<b>2024/26 Use Attainment</b>	<b>Alert</b>
Not Supporting	NO
<b>2024/26 Use Attainment Summary</b>	

The Secondary Contact Recreation Use for Ponkapog Brook (MA73-27) is assessed as Not Supporting. An Escherichia Coli (E. Coli) impairment is being added due to bacteria data not meeting the threshold at 1 combined station in 2018-2022. MassDEP and Neponset River Watershed Association (NepRWA) staff/volunteers collected *E. coli* bacteria samples in both the historic (1997-2010) & the current IR window (2011-2022) three-quarters of the way down Ponkapog Brook at combined station W0566 & NepRWA\_POB040 [Elm St, Canton & Elm St, Canton] from 2008-2010 (historic n=5-12/yr) and 2011-2014 and 2016-2022 (current n=2-9/yr). Analysis of the recent five years of the multi-year limited frequency dataset from this station indicated 5 out of 5 sufficient data yrs had intervals where >20% of the GMs were >244 CFU/100ml (2018-2022, 25-75%) and while only 1 yr had ≥2 samples exceed the 794 CFU/100ml STV (2018, n=2), cumulatively across years 65% of intervals had GMs >244 CFU/100ml, which is indicative of an Escherichia Coli (E. Coli) impairment.

## Designated Use Attainment Decisions

### Fish Consumption

<b>2024/26 Use Attainment</b>	<b>Alert</b>
Not Assessed	NO
<b>2024/26 Use Attainment Summary</b>	
Fish toxics sampling has not been conducted recently, so the Fish Consumption Use for Purgatory Brook (MA73-24) is Not Assessed.	

### Aesthetic

<b>2024/26 Use Attainment</b>	<b>Alert</b>
Not Supporting	NO
<b>2024/26 Use Attainment Summary</b>	
The Aesthetics Use for Purgatory Brook (MA73-24) continues to be assessed as Not Supporting with the prior Debris and Trash impairments being carried forward. No new data are available to evaluate the Aesthetics Use for Purgatory Brook.	

## Primary Contact Recreation

2024/26 Use Attainment	Alert
Not Supporting	NO

2024/26 Use Attainment Summary
<p>The Primary Contact Recreation Use for Purgatory Brook (MA73-24) continues to be assessed as Not Supporting. The prior Escherichia Coli (E. Coli) impairment is being carried forward based on bacteria data not meeting the threshold at 1 station in 2018-2022. The prior Fecal Coliform impairment is being carried forward and the prior Debris and Trash impairments (from the Aesthetics Use) are also being carried forward. Neponset River Watershed Association (NepRWA) staff/volunteers collected <i>E. coli</i> bacteria samples a third of the way down Purgatory Brook at NepRWA_PUB022 [Rt 1A, near Everett St, Westwood] from 2011-2014 and 2017-2022 (n=4-6/yr). Analysis of the recent five years of the multi-year limited frequency dataset from this station indicated 5 out of 5 sufficient data yrs had intervals where &gt;20% of the GMs were &gt;126 CFU/100ml (2018-2022, 75-100%), 5 yrs had ≥2 samples exceed the 410 CFU/100ml STV (2018-2022, n=2-5) and cumulatively across years 89% of intervals had GMs &gt;126 CFU/100ml, which is indicative of an Escherichia Coli (E. Coli) impairment.</p>

## Secondary Contact Recreation

<b>2024/26 Use Attainment</b>	<b>Alert</b>
Not Supporting	NO

### 2024/26 Use Attainment Summary

The Secondary Contact Recreation Use for Purgatory Brook (MA73-24) continues to be assessed as Not Supporting. The prior Debris and Trash impairments (from the Aesthetics Use) are being carried forward. An Escherichia Coli (E. Coli) impairment is being added due to bacteria data not meeting the threshold at 1 station in 2018-2022. MassDEP and NepRWA staff/volunteers collected *E. coli* bacteria samples in both the historic (1997-2010) & the current IR window (2011-2022) in Purgatory Brook from 2008-2022 at 2 stations. Samples were collected from the following stations/sample years from upstream to downstream: a third of the way down the brook at NepRWA\_PUB022 [Rt 1A, near Everett St, Westwood] from 2008-2010 (historic n=6/yr) and 2011-2014 and 2017-2022 (current n=4-6/yr), and just a little further downstream at W1953 [Everett St, Norwood] from Apr-Sep 2009 (historic n=5). Analysis of the recent five years of the multi-year limited frequency dataset from NepRWA\_PUB022 indicated 5 out of 5 sufficient data yrs had intervals where >20% of the GMs were >244 CFU/100ml (2018-2022, 50-100%), 4 yrs had ≥2 samples exceed the 794 CFU/100ml STV (2018-2020 and 2022, n=2-4), and cumulatively across years 84% of intervals had GMs >244 CFU/100ml, which is indicative of an Escherichia Coli (E. Coli) impairment. It should be noted that data in the historic IR window at both stations NepRWA\_PUB022 and W1953 were also indicative of an Escherichia Coli (E. Coli) impairment; with 50% cumulatively of the GM intervals >244 CFU/100ml for the multi year low frequency dataset at NepRWA\_PUB022 and 100% of all the GM intervals >244 CFU/100ml for the single year low frequency dataset at W1953.

## Designated Use Attainment Decisions

### Fish Consumption

2024/26 Use Attainment	Alert
Not Supporting	NO

2024/26 Use Attainment Summary
The Fish Consumption Use for Reservoir Pond (MA73048) continues to be assessed as Not Supporting and the prior Mercury in Fish Tissue impairment is being carried forward. MDPH included a site-specific advisory for Reservoir Pond in their January 2025 Freshwater Fish Consumption Advisory List. The public should refer to the most recent MDPH Freshwater Fish Consumption Advisory List for the most up to date meal advice for sensitive and general populations.

### Aesthetic

2024/26 Use Attainment	Alert
Not Assessed	NO

2024/26 Use Attainment Summary
No data are available, so the Aesthetics Use for Reservoir Pond (MA73048) is Not Assessed.

### Primary Contact Recreation

2024/26 Use Attainment	Alert
Not Assessed	NO

2024/26 Use Attainment Summary
No bacteria or other indicator data for Reservoir Pond (MA73048) are available, so the Primary Contact Recreation Use is Not Assessed.

### Secondary Contact Recreation

2024/26 Use Attainment	Alert
Not Assessed	NO

2024/26 Use Attainment Summary
No bacteria or other indicator data for Reservoir Pond (MA73048) are available in the current IR window (2011-2022), so the Secondary Contact Recreation Use is Not Assessed.

## Russell Pond (MA73003)

<b>Location:</b>	Milton.
<b>AU Type:</b>	FRESHWATER LAKE
<b>AU Size:</b>	9 ACRES
<b>Classification/Qualifier:</b>	B

No usable data were available for Russell Pond (MA73003) for the 2024/26 Integrated Reporting cycle, therefore its category, use attainments, impairments, associated actions, and sources remain unchanged from the previous cycle.

## Designated Use Attainment Decisions

### Fish Consumption

2024/26 Use Attainment	Alert
Not Assessed	NO

2024/26 Use Attainment Summary
Fish toxics sampling has not been conducted recently, so the Fish Consumption Use for School Meadow Brook (MA73-06) is Not Assessed.

### Aesthetic

2024/26 Use Attainment	Alert
Fully Supporting	NO

2024/26 Use Attainment Summary
The Aesthetics Use for School Meadow Brook (MA73-06) continues to be assessed as Fully Supporting based on the general lack of objectionable conditions observed by MassDEP staff during summer 2015. The prior Alert identified for Aquatic Plants (Macrophytes) based on observations of dense plants at Washington Street in 2009, is being removed since no concern over Aquatic Plant density was raised by MassDEP staff during site visits to the same station in 2015. Aesthetic observations were made by MassDEP field sampling crews at two stations in the downstream half of School Meadow Brook in Walpole, during the summer of 2015 as part of the MassDEP Bacteria Source Tracking (BST) project; Washington Street (W1936, n=3) and ~500 feet downstream of Washington Street (W2550, n=3). There were generally no persistent objectionable conditions (odors, deposits, growths, or turbidity) recorded at either station.

### Monitoring Stations

Station Code	Organization	Type	Water Body	Station Description	Latitude	Longitude
W1936	MassDEP	Water Quality	School Meadow Brook	[Washington Street, Walpole]	42.125402	-71.245996
W2550	MassDEP	Water Quality	School Meadow Brook	[approximately 500 feet downstream of Washington Street, Walpole]	42.126577	-71.247286

### Aesthetic Observations

#### Aesthetics Summary Statements for MassDEP Stations (2011-2020) (MassDEP Undated 6)

[Note: scums of natural origins (e.g. pollen blankets or natural foams) are excluded.]

Station Code	Data Year	Field Sheet Count	Aesthetics Summary Statement
W1936	2015	3	Aesthetic observations were made by MassDEP field sampling crews at Station W1936 on School Meadow Brook (MA73-06) during 3 site visits between Jun 2015 and Aug 2015. There were generally no persistent objectionable conditions (odors, deposits, growths, or turbidity) recorded.
W2550	2015	3	Aesthetic observations were made by MassDEP field sampling crews at Station W2550 on School Meadow Brook (MA73-06) during 3 site visits between Jun 2015 and Aug 2015. There were generally no persistent objectionable conditions (odors, deposits, growths, or turbidity) recorded.

### Primary Contact Recreation

<b>2024/26 Use Attainment</b>	<b>Alert</b>
Not Supporting	NO
<b>2024/26 Use Attainment Summary</b>	

The Primary Contact Recreation Use for School Meadow Brook (MA73-06) is assessed as Not Supporting. An Escherichia Coli (E. Coli) impairment is being added due to bacteria data not meeting the threshold at 2 stations in 2015 & 2018-2022. The prior Alert identified for Aquatic Plants (Macrophytes) based on observations of dense plants at Washington Street in 2009, is being removed since no concern over Aquatic Plant density was raised by MassDEP staff during site visits to the same station in 2015. MassDEP and Neponset River Watershed Association (NepRWA) staff/volunteers collected *E. coli* bacteria samples in School Meadow Brook from 2011-2022 at 3 stations. Samples were collected from the following stations/sample years from upstream to downstream: the upstream end at NepRWA\_SMB001 [Pine St, Walpole] from 2011-2014 and 2017-2022 (n=5-6/yr), then roughly three-quarters of the way down the brook at W1936 [Washington St, Walpole] from Jun-Aug 2015 (n=3) and W2550 [~500 ft downstream of Washington St, Walpole] from Jun-Aug 2015 (n=3). Analysis of the recent five years of this multi-year limited frequency *E. coli* dataset from NepRWA\_SMB001 indicated 3 out of 5 sufficient data yrs had intervals where >20% of the GMs were >126 CFU/100ml (2018-2019 and 2022, 25-75%), 1 yr had ≥2 samples exceed the 410 CFU/100ml STV (2022, n=2), and cumulatively across years 25% of intervals had GMs >126 CFU/100ml. Analysis of the single year limited frequency *E. coli* dataset from W1936 indicated 100% of intervals had GMs >126 CFU/100ml, 1 sample exceeded the 410 CFU/100ml STV, and the seasonal GM was 198 CFU/100ml. Analysis of the single year limited frequency *E. coli* dataset from W2550 indicated 0% of intervals had GMs >126 CFU/100ml, no samples exceeded the 410 CFU/100ml STV, and the seasonal GM was 125 CFU/100ml. While *E. coli* data from W2550 meets 2024 CALM guidance, *E. coli* data from NepRWA\_SMB001 and W1936 are indicative of an Escherichia Coli (E. Coli) impairment.

**Secondary Contact Recreation**

<b>2024/26 Use Attainment</b>	<b>Alert</b>
Fully Supporting	NO
<b>2024/26 Use Attainment Summary</b>	

The Secondary Contact Recreation Use for School Meadow Brook (MA73-06) continues to be assessed as Fully Supporting based on bacteria data collected at 3 stations in 2015 & 2018-2022. The prior Alert identified for Aquatic Plants (Macrophytes) based on observations of dense plants at Washington Street in 2009, is being removed since no concern over Aquatic Plant density was raised by MassDEP staff during site visits to the same station in 2015. MassDEP and Neponset River Watershed Association (NepRWA) staff/volunteers collected *E. coli* bacteria samples in both the historic (1997-2010) & the current IR window (2011-2022) in School Meadow Brook from 2008-2022 at 3 stations. Samples were collected from the following stations/sample years from upstream to downstream: the upstream end at NepRWA\_SMB001 [Pine St, Walpole] from 2008-2010 (historic n=5-6/yr) and 2011-2014 and 2017-2022 (current n=5-6/yr), then roughly three-quarters of the way down the brook at W1936 [Washington St, Walpole] from Apr-Sep 2009 (historic n=5) and Jun-Aug 2015 (current n=3) and also W2550 [~500 ft downstream of Washington St, Walpole] from Jun-Aug 2015 (current n=3). Since bacteria data from the historic IR window are all indicative of good water quality conditions, only the analysis from the current IR window will be summarized here. Analysis of the recent five years of this multi-year limited frequency *E. coli* dataset from NepRWA\_SMB001 indicated 1 out of 5 sufficient data yrs had intervals where >20% of the GMs were >244 CFU/100ml (2022, 50%), 1 yr had ≥2 samples exceed the 794 CFU/100ml STV (2022, n=2), and cumulatively across years 10% of intervals had GMs >244 CFU/100ml. Analysis of the single year limited frequency *E. coli* datasets from both stations W1936 & W2550 indicated 0% of intervals had GMs >244 CFU/100ml, no samples exceeded the 794 CFU/100ml STV, and the overall GM's were 198 & 125 CFU/100ml respectively. The data from stations NepRWA\_SMB001, W1936, and W2550 all meet 2024 CALM guidance.

### Primary Contact Recreation

<b>2024/26 Use Attainment</b>	<b>Alert</b>
Fully Supporting	NO

<b>2024/26 Use Attainment Summary</b>
---------------------------------------

The Primary Contact Recreation Use for Sprague Pond (MA73053) is assessed as Fully Supporting based on bacteria data collected at 1 station in 2019-2020. Neponset River Watershed Association (NepRWA) staff/volunteers collected *E. coli* bacteria samples in Sprague Pond at NepRWA\_SGP053 [Sprague Pond at Horne St, Dedham] from 2019-2020 (n=6-8/yr). Analysis of the multi-year moderate frequency dataset from this station indicated 1 out of 2 sufficient data yrs had intervals where >20% of the GMs were >126 CFU/100ml (2020, 25%), 0 yrs had ≥2 samples exceed the 410 CFU/100ml STV, and cumulatively across years 14% of intervals had GMs >126 CFU/100ml. *E. coli* data from NepRWA\_SGP053 meet 2024 CALM guidance.

Not Supporting	NO

2024/26 Use Attainment Summary
No bacteria or other indicator data for Steep Hill Brook (MA73-18) are available, so the Primary Contact Recreation Use continues to be assessed as Not Supporting. The prior Escherichia Coli (E. Coli) impairment is being carried forward.

### Secondary Contact Recreation

2024/26 Use Attainment	Alert
Not Supporting	NO

2024/26 Use Attainment Summary

The Secondary Contact Recreation Use for Steep Hill Brook (MA73-18) is assessed as Not Supporting. An Escherichia Coli (E. Coli) impairment is being added based on a re-evaluation of bacteria data not meeting the threshold at 1 station in 2009. MassDEP staff collected *E. coli* bacteria samples three-quarters of the way down Steep Hill Brook at W1944 [W of the northern end of Erin Rd, ~2400 ft downstream of Rt. 27, Stoughton] from Apr-Sep 2009 (n=6). Analysis of the historic single year limited frequency dataset from this station indicated 100% of intervals had GMs >244 CFU/100ml, 1 sample exceeded the 794 CFU/100ml STV and the overall GM was 352 CFU/100ml, which is indicative of an Escherichia Coli (E. Coli) impairment.

**Monitoring Stations**

## Recommendations

2024/26 Recommendations
2024IR [Bacteria, Medium] Additional monitoring for <i>E.coli</i> should be conducted in Town Pond (MA73056) in the area of Neponset River Watershed Association (NepRWA) sample station {NepRWA_UTS032} to evaluate the elevated concentrations of Escherichia coli (E. Coli) at NepRWA_UTS032 measured in 2019.

## Designated Use Attainment Decisions

### Fish Consumption

2024/26 Use Attainment	Alert
------------------------	-------

Not Assessed	NO
--------------	----

**2024/26 Use Attainment Summary**

Fish toxics sampling has not been conducted recently, so the Fish Consumption Use for Town Pond (MA73056) is Not Assessed.

**Aesthetic**

<b>2024/26 Use Attainment</b>	<b>Alert</b>
Not Assessed	NO

**2024/26 Use Attainment Summary**

No data are available, so the Aesthetics Use for Town Pond (MA73056) is Not Assessed.

**Primary Contact Recreation**

<b>2024/26 Use Attainment</b>	<b>Alert</b>
Fully Supporting	YES

**2024/26 Use Attainment Summary**

The Primary Contact Recreation Use for Town Pond (MA73056) is assessed as Fully Supporting based on bacteria data collected at 1 station in 2019-2020, although an Alert is being identified for Escherichia coli (E. Coli). Neponset River Watershed Association (NepRWA) staff/volunteers collected *E. coli* bacteria samples in Town Pond at NepRWA\_UTS032 [Unnamed Tributary of Steep Hill Brook at W St, Stoughton] from 2019-2020 (n=6-8/yr). Analysis of the multi-year moderate frequency dataset from this station indicated 1 out of 2 sufficient data yrs had intervals where >20% of the GMs were >126 CFU/100ml (2019, 30%), 1 yr had ≥2 samples exceed the 410 CFU/100ml STV (2019, n=3), and cumulatively across years 21% of intervals had GMs >126 CFU/100ml (which exceeds the 2024 CALM threshold of 10%). While *E. coli* data from NepRWA\_UTS032 meet 2024 CALM guidance, an Alert is being identified for Escherichia coli (E. Coli) at NepRWA\_UTS032 due to the elevated concentrations in 2019, which resulted in the cumulative percentage of intervals >126 CFU/100ml being >10%.

**Monitoring Stations**

## Recommendations

2024/26 Recommendations
2016IR [Algae, Low] Follow-up monitoring should be conducted in Traphole Brook (MA73-17) in particular at Cooney Street, Walpole to evaluate dense filamentous observed at this location in 2009. {W0551}

## Designated Use Attainment Decisions

### Fish Consumption

2024/26 Use Attainment	Alert
Not Assessed	NO
2024/26 Use Attainment Summary	
Fish toxics sampling has not been conducted recently, so the Fish Consumption Use for Traphole Brook (MA73-17) is Not Assessed.	

### Aesthetic

2024/26 Use Attainment	Alert
Not Assessed	YES
2024/26 Use Attainment Summary	
There are no data available to assess the status of the Aesthetics Use for this Traphole Brook AU (MA73-17), so it is Not Assessed. The prior Alert identified for dense Filamentous Algae at Cooney Street, Walpole (W0551) in 2009 is being carried forward (MassDEP Undated 9).	

### Primary Contact Recreation

2024/26 Use Attainment	Alert
Not Supporting	NO
2024/26 Use Attainment Summary	

The Primary Contact Recreation Use for Traphole Brook (MA73-17) is assessed as Not Supporting. An Escherichia Coli (E. Coli) impairment is being added due to bacteria data not meeting the threshold at 1 station in 2018-2022. The prior Alert for dense Filamentous Algae is being removed from the Recreational Uses but continues to be maintained under the Aesthetics Use. Neponset River Watershed Association (NepRWA) staff/volunteers collected *E. coli* bacteria samples three-quarters of the way down Traphole Brook at NepRWA\_THB033 [Sumner St, Norwood] from 2011-2014 and 2017-2022 (n=5-6/yr). Analysis of the recent five years of the multi-year limited frequency dataset from this station indicated 5 out of 5 sufficient data yrs had intervals where >20% of the GMs were >126 CFU/100ml (2018-2022, 75-100%), 4 yrs had ≥2 samples exceed the 410 CFU/100ml STV (2018 and 2020-2022, n=2-4) and cumulatively across years 90% of intervals had GMs >126 CFU/100ml, which is indicative of an Escherichia Coli (E. Coli) impairment.

## Secondary Contact Recreation

<b>2024/26 Use Attainment</b>	<b>Alert</b>
Not Supporting	NO

<b>2024/26 Use Attainment Summary</b>
---------------------------------------

The Secondary Contact Recreation Use for Traphole Brook (MA73-17) is assessed as Not Supporting. An Escherichia Coli (E. Coli) impairment is being added due to bacteria data not meeting the threshold at 1 station in 2018-2022. The prior Alert for dense Filamentous Algae is being removed from the Recreational Uses but continues to be maintained under the Aesthetics Use. MassDEP and Neponset River Watershed Association (NepRWA) staff/volunteers collected *E. coli* bacteria samples in both the historic (1997-2010) & the current IR window (2011-2022) in Traphole Brook from 2008-2022 at 2 stations. Samples were collected from the following stations/sample years from upstream to downstream: halfway down the AU at W0551 [Cooney St, Walpole] from Apr-Sep 2009 (n=6) and three-quarters of the way down at NepRWA\_THB033 [Sumner St, Norwood] from 2008-2010 (historic n=6/yr) as well as in 2011-2014 and 2017-2022 (current n=5-6/yr). Since bacteria data from the historic IR window (at W0551) was indicative of good water quality conditions, only the analysis from the current IR window (at NepRWA\_THB033) will be summarized here. Analysis of the recent five years of the multi-year limited frequency *E. coli* dataset from NepRWA\_THB033 indicated 5 out of 5 sufficient data yrs had intervals where >20% of the GMs were >244 CFU/100ml (2018-2022, 75-100%), 3 yrs had  $\geq 2$  samples exceed the 794 CFU/100ml STV (2018 and 2021-2022, n=2) and cumulatively across years 85% of intervals had GMs >244 CFU/100ml, which is indicative of an Escherichia Coli (E. Coli) impairment. It should be noted that data in the historic IR window at NepRWA\_THB033 was also indicative of an Escherichia Coli (E. Coli) impairment, with 50% cumulatively of the GM intervals >244 CFU/100ml for the multi year low frequency dataset.

## Designated Use Attainment Decisions

### Fish Consumption

2024/26 Use Attainment	Alert
Not Assessed	NO

2024/26 Use Attainment Summary
Fish toxics sampling has not been conducted recently, so the Fish Consumption Use for Tubwreck Brook (MA73-07) is Not Assessed.

## Aesthetic

2024/26 Use Attainment	Alert
Not Assessed	NO

2024/26 Use Attainment Summary
No data are available, so the Aesthetics Use for Tubwreck Brook (MA73-07) is Not Assessed.

## Primary Contact Recreation

2024/26 Use Attainment	Alert
Not Assessed	NO

2024/26 Use Attainment Summary
No bacteria or other indicator data for Tubwreck Brook (MA73-07) are available, so the Primary Contact Recreation Use is Not Assessed.

## Secondary Contact Recreation

2024/26 Use Attainment	Alert
Not Assessed	NO

2024/26 Use Attainment Summary
No bacteria or other indicator data for Tubwreck Brook (MA73-07) are available in the current IR window (2011-2022), so the Secondary Contact Recreation Use is Not Assessed. MassDEP staff collected <i>E. coli</i> bacteria samples at the downstream end of Tubwreck Brook at W1937 [Draper Rd, Dover] from Apr-Sep 2009 (n=5). Analysis of the historic single year limited frequency dataset from this station indicated 33% of intervals had GMs >244 CFU/100ml, 2 samples exceeded the 794 CFU/100ml STV and the overall GM was 105 CFU/100ml. Historic <i>E. coli</i> data from W1937 are inconclusive according to the 2024 CALM to assess the Secondary Contact Recreation Use because this single year, limited frequency dataset included both GMs below the threshold and STV exceedance of the threshold. Since these data were collected prior to the current IR window (2011-2022) the Secondary Contact Recreation Use cannot be positively assessed using bacteria data.

## Monitoring Stations

## Recommendations

2024/26 Recommendations
2024IR [Harmful Algal Blooms, Low] Follow-up monitoring should be conducted in Turners Pond (MA73059) to determine if Harmful Algal Blooms may be impairing the Recreational and Aesthetic uses. Monitoring should include observational data and collection of cyanobacteria cell count data, as well as continued reporting of algal blooms to MDPH. This is of low priority;

## Designated Use Attainment Decisions

### Fish Consumption

2024/26 Use Attainment	Alert
Not Assessed	NO

2024/26 Use Attainment Summary
Fish toxics sampling has not been conducted recently, so the Fish Consumption Use for Turners Pond (MA73059) is Not Assessed.

### Aesthetic

2024/26 Use Attainment	Alert
Not Supporting	NO

2024/26 Use Attainment Summary
The Aesthetics Use for Turners Pond (MA73059) continues to be assessed as as Not Supporting with the prior Turbidity impairment being carried forward. During the period 2015 through 2022, C-HAB postings for Turners Pond were reported to MDPH based on visual observations of an unknown duration in 2022 and no blooms were reported in other years. A recommendation for follow-up monitoring will be made. No new data are available to evaluate the Aesthetics Use for Turners Pond.

### Algal Bloom Information

**Cyanobacteria Harmful Algal Bloom (C-HAB) Summary Statements for 2015-2022 MDPH Data** (Bailey, Logan April 26, 2023) (MassDEP Undated 3)

C-HAB Summary Statement
During the period 2015 through 2022, C-HAB postings for Turners Pond (MA73059) were reported to MDPH based on visual observations of an unknown duration in 2022. No blooms were reported in other years. A recommendation for follow-up monitoring will be made.

### Fish Consumption

<b>2024/26 Use Attainment</b>	<b>Alert</b>
Not Assessed	NO

<b>2024/26 Use Attainment Summary</b>
Fish toxics sampling has not been conducted recently, so the Fish Consumption Use for Unnamed Tributary (MA73-10) is Not Assessed.

## Aesthetic

2024/26 Use Attainment	Alert
Not Assessed	NO

2024/26 Use Attainment Summary
No data are available, so the Aesthetics Use for Unnamed Tributary (MA73-10) is Not Assessed

## Primary Contact Recreation

2024/26 Use Attainment	Alert
Fully Supporting	NO

2024/26 Use Attainment Summary
The Primary Contact Recreation Use for Unnamed Tributary (MA73-10) is assessed as Fully Supporting based on bacteria data collected at 1 station in 2018-2022. Neponset River Watershed Association (NepRWA) staff/volunteers collected <i>E. coli</i> bacteria samples at the upstream end of this Unnamed Tributary (to the Neponset River) at NepRWA_MMB106 [Turner's Pond upstream at Mill Pond Rd] from 2011-2014 and 2017-2022 (n=4-6/yr). Analysis of the recent five years of the multi-year limited frequency dataset from this station indicated 0 out of 5 sufficient data yrs had intervals where >20% of the GMs were >126 CFU/100ml, 0 yrs had ≥2 samples exceed the 410 CFU/100ml STV and cumulatively across years 0% of intervals had GMs >126 CFU/100m, which meets 2024 CALM guidance.

## Secondary Contact Recreation

<b>2024/26 Use Attainment</b>	<b>Alert</b>
Fully Supporting	NO

### 2024/26 Use Attainment Summary

The Secondary Contact Recreation Use for Unnamed Tributary (MA73-10) is assessed as Fully Supporting based on bacteria data collected at 1 station in 2018-2022. Neponset River Watershed Association (NepRWA) staff/volunteers collected *E. coli* bacteria samples in both the historic (1997-2010) & the current IR window (2011-2022) at the upstream end of this Unnamed Tributary (to the Neponset River) at NepRWA\_MMB106 [Turner's Pond upstream at Mill Pond Rd] from 2008-2010 (historic n=6/yr) and 2011-2014 and 2017-2022 (current n=4-6/yr). Since bacteria data from the historic IR window at this station are indicative of good water quality conditions, only the analysis from the current IR window will be summarized here. Analysis of the recent five years of this multi-year limited frequency *E. coli* dataset from NepRWA\_MMB106 indicated 0 out of 5 sufficient data yrs had intervals where >20% of the GMs were >244 CFU/100ml, 0 yrs had ≥2 samples exceed the 794 CFU/100ml STV and cumulatively across years 0% of intervals had GMs >244 CFU/100ml, which meets 2024 CALM guidance.

## Designated Use Attainment Decisions

### Fish Consumption

2024/26 Use Attainment	Alert
Not Assessed	NO

2024/26 Use Attainment Summary
Fish toxics sampling has not been conducted recently, so the Fish Consumption Use for Unnamed Tributary (MA73-32) is Not Assessed.

### Aesthetic

2024/26 Use Attainment	Alert
Fully Supporting	NO

2024/26 Use Attainment Summary
The Aesthetics Use for this Unnamed Tributary to Steep Hill Brook (MA73-32) continues to be assessed as Fully Supporting based on the general lack of objectionable conditions observed by MassDEP staff throughout the AU during the summer of 2015. MassDEP staff recorded aesthetics observations at 4 stations in Stoughton on this Unnamed Tributary AU, during the summer of 2015 as part of the MassDEP Bacteria Source Tracking (BST) project. These stations are described from upstream to downstream as follows: close to the upstream end of the AU at the outlet of Town Pond, Pratts Court (W2556, n=2), a third of the way down the AU at Central Street (W2554, n=3), two-thirds of the way down at Mill Street (W2553, n=3) and the downstream end of the AU at Erin Road (W2552, n=3). There were generally no noted objectionable conditions (odors, deposits, growths, or turbidity) recorded by field sampling crews at any of the stations, though field staff noted very dense Aquatic Plants on two occasions at W2552.

### Monitoring Stations

Station Code	Organization	Type	Water Body	Station Description	Latitude	Longitude
W2552	MassDEP	Water Quality	Unnamed Tributary	[unnamed tributary to Steep Hill Brook, Erin Road, Stoughton]	42.137177	-71.138331
W2553	MassDEP	Water Quality	Unnamed Tributary	[unnamed tributary to Steep Hill Brook, Mill Street, Stoughton]	42.134163	-71.132868
W2554	MassDEP	Water Quality	Unnamed Tributary	[unnamed tributary to Steep Hill Brook, Central Street, Stoughton]	42.130660	-71.129284
W2556	MassDEP	Water Quality	Unnamed Tributary	[unnamed tributary to Steep Hill Brook, outlet Town Pond, Pratts Court, Stoughton]	42.126836	-71.129686

## Aesthetic Observations

### Aesthetics Summary Statements for MassDEP Stations (2011-2020) (MassDEP Undated 6)

[Note: scums of natural origins (e.g. pollen blankets or natural foams) are excluded.]

Station Code	Data Year	Field Sheet Count	Aesthetics Summary Statement
W2552	2015	3	Aesthetic observations were made by MassDEP field sampling crews at Station W2552 on Unnamed Tributary (MA73-32) during 3 site visits between May 2015 and Aug 2015. There were generally no persistent objectionable conditions (odors, deposits, growths, or turbidity) recorded, though field staff noted dense/very dense aquatic plants (n=2).
W2553	2015	3	Aesthetic observations were made by MassDEP field sampling crews at Station W2553 on Unnamed Tributary (MA73-32) during 3 site visits between May 2015 and Aug 2015. There were generally no persistent objectionable conditions (odors, deposits, growths, or turbidity) recorded.
W2554	2015	3	Aesthetic observations were made by MassDEP field sampling crews at Station W2554 on Unnamed Tributary (MA73-32) during 3 site visits between May 2015 and Aug 2015. There were generally no persistent objectionable conditions (odors, deposits, growths, or turbidity) recorded.
W2556	2015	2	Aesthetic observations were made by MassDEP field sampling crews at Station W2556 on Unnamed Tributary (MA73-32) during 2 site visits between Jul 2015 and Aug 2015. There were generally no persistent objectionable conditions (odors, deposits, growths, or turbidity) recorded. However, aesthetic observations are limited (n<3).

### Observations of Filamentous/Film Algae at MassDEP Stations (2011-2020) (MassDEP Undated 10) (MassDEP Undated 6)

## Primary Contact Recreation

<b>2024/26 Use Attainment</b>	<b>Alert</b>
Not Supporting	NO

<b>2024/26 Use Attainment Summary</b>
---------------------------------------

The Primary Contact Recreation Use for Unnamed Tributary (MA73-32) continues to be assessed as Not Supporting. The prior Escherichia Coli (E. Coli) impairment is being carried forward based on bacteria data not meeting the threshold at 1 combined station in 2018-2022. MassDEP and Neponset River Watershed Association (NepRWA) staff/volunteers collected *E. coli* bacteria samples in this Unnamed Tributary to Steep Hill Brook from 2011-2022 at 4 stations/combined stations. Samples were collected from the following stations/sample years from upstream to downstream: the upstream end of the AU at W2556 [outlet Town Pond, Pratts Court, Stoughton] from Jul-Aug 2015 (n=2), a third of the way down the AU at combined station W2554 & NepRWA\_SHB021 [Central St, Stoughton] from 2011-2015 and 2017-2022 (n=3-6/yr), two-thirds of the way down at W2553 [Mill St, Stoughton] from May-Aug 2015 (n=3) and the downstream end of the AU at W2552 [Erin Rd, Stoughton] from May-Aug 2015 (n=3). The available *E. coli* data at stations W2556, W2553 & W2552 are all too limited to assess the Primary Contact Recreation Use according to the 2024 CALM, though it should be noted that 1 sample exceeded the 410 CFU/100ml STV at W2552 in 2015 (921 CFU). However, analysis of the recent five years of the multi-year limited frequency *E. coli* dataset from W2554 & NepRWA\_SHB021 indicated 5 out of 5 sufficient data yrs had intervals where >20% of the GMs were >126 CFU/100ml (2018-2022, 25-100%), 3 yrs had  $\geq 2$  samples exceed the 410 CFU/100ml STV (2018-2019 and 2022, n=2-4), and cumulatively across years 70% of intervals had GMs >126 CFU/100ml, which is indicative of an Escherichia Coli (E. Coli) impairment.

**Secondary Contact Recreation**

<b>2024/26 Use Attainment</b>	<b>Alert</b>
Not Supporting	NO
<b>2024/26 Use Attainment Summary</b>	

The Secondary Contact Recreation Use for Unnamed Tributary (MA73-32) is assessed as Not Supporting. An Escherichia Coli (E. Coli) impairment is being added due to bacteria data not meeting the threshold at 1 combined station in 2018-2022. MassDEP and Neponset River Watershed Association (NepRWA) staff/volunteers collected *E. coli* bacteria samples in both the historic (1997-2010) & the current IR window (2011-2022) in this Unnamed Tributary to Steep Hill Brook, from 2008-2022 at 5 stations. Samples were collected from the following stations/sample years from upstream to downstream: the upstream end of the AU at W2556 [outlet Town Pond, Pratts Court, Stoughton] from Jul-Aug 2015 (n=2), a third of the way down the AU at combined station W2554 & NepRWA\_SHB021 [Central St, Stoughton] from 2008-2010 (historic n=4-6/yr) also in 2011-2015 and 2017-2022 (current n=3-6/yr), two-thirds of the way down at W2553 [Mill St, Stoughton] from May-Aug 2015 (n=3), three-quarters of the way down at W1951 [~950 ft upstream of Erin Rd, Stoughton] from Apr-Sep 2009 (n=6), and the downstream end of the AU at W2552 [Erin Rd, Stoughton] from May-Aug 2015 (n=3). The available *E. coli* data at stations W2556, W2553 & W2552 are all too limited to assess the Secondary Contact Recreation Use according to the 2024 CALM, though it should be noted that 1 sample exceeded the 794 CFU/100ml STV at W2552 in 2015 (921 CFU). However, analysis of the recent five years of the multi-year limited frequency *E. coli* dataset from combined station W2554 & NepRWA\_SHB021 indicated 4 out of 5 sufficient data yrs had intervals where >20% of the GMs were >244 CFU/100ml (2018-2019 and 2021-2022, 25-75%) and while only 1 yr had ≥2 samples exceed the 794 CFU/100ml STV (2018, n=2), cumulatively across years 45% of intervals had GMs >244 CFU/100ml, which is indicative of an Escherichia Coli (E. Coli) impairment. It should be noted that data in the historic IR window at station W1951 was also indicative of an Escherichia Coli (E. Coli) impairment, with 66% of the GM intervals >244 CFU/100ml for this single year low frequency dataset.

**Monitoring Stations**

Station Code	Organization	Type	Water Body	Station Description	Latitude	Longitude
W1951	MassDEP	Water Quality	Unnamed Tributary	[unnamed tributary to Steep Hill Brook, approximately 950 feet upstream of Erin Road, Stoughton]	42.135719	-71.135626
W2552	MassDEP	Water Quality	Unnamed Tributary	[unnamed tributary to Steep Hill Brook, Erin Road, Stoughton]	42.137177	-71.138331

## Designated Use Attainment Decisions

### Fish Consumption

<b>2024/26 Use Attainment</b>	<b>Alert</b>
Not Assessed	NO

<b>2024/26 Use Attainment Summary</b>
Fish toxics sampling has not been conducted recently, so the Fish Consumption Use for Unnamed Tributary (MA73-33) is Not Assessed.

### Aesthetic

<b>2024/26 Use Attainment</b>	<b>Alert</b>
Insufficient Information	NO

<b>2024/26 Use Attainment Summary</b>
There is insufficient information to assess the Aesthetics Use for this Unnamed Tributary to Neponset River, locally known as Meadow Brook (MA73-33). MassDEP staff recorded a limited number of aesthetics observations at one station at the upstream end of this Unnamed Tributary, during the summer of 2017 as part of the MassDEP Bacteria Source Tracking (BST) project; where the underground culvert daylights near Meadow Brook Road (east of Pleasant Street), Norwood (W0548, n=1). There were generally no noted objectionable conditions (odors, deposits, growths, or turbidity) recorded by field sampling crews at this station, though observations are limited.

### Monitoring Stations

Station Code	Organization	Type	Water Body	Station Description	Latitude	Longitude
W0548	MassDEP	Water Quality	Unnamed Tributary	[unnamed tributary to Neponset River, locally known as Meadow Brook. Sampled where it comes out of underground culvert near Meadow Brook Road (east of Pleasant Street), Norwood]	42.184422	-71.193827

### ***Aesthetic Observations***

#### **Aesthetics Summary Statements for MassDEP Stations (2011-2020)** (MassDEP Undated 6)

[Note: scums of natural origins (e.g. pollen blankets or natural foams) are excluded.]

Station Code	Data Year	Field Sheet Count	Aesthetics Summary Statement
W0548	2017	1	Aesthetic observations were made by MassDEP field sampling crews at Station W0548 on Unnamed Tributary (MA73-33) during 1 site visit on Aug 29, 2017. There were generally no persistent objectionable conditions (odors, deposits, growths, or turbidity) recorded. However, aesthetic observations are limited (n<3).

#### **Observations of Filamentous/Film Algae at MassDEP Stations (2011-2020)** (MassDEP Undated 10) (MassDEP Undated 6)

W0548	Unnamed Tributary	2017	Turbidity	None	1	1

## Primary Contact Recreation

2024/26 Use Attainment	Alert
Not Supporting	NO

### 2024/26 Use Attainment Summary

The Primary Contact Recreation Use for Unnamed Tributary (MA73-33) continues to be assessed as Not Supporting. The prior Escherichia Coli (E. Coli) impairment is being carried forward based on bacteria data not meeting the threshold at 1 combined station in 2018-2022. MassDEP and Neponset River Watershed Association (NepRWA) staff/volunteers collected *E. coli* bacteria samples at the upstream end of this Unnamed Tributary to Neponset River, (locally known as Meadow Brook) at W0548 & NepRWA\_MEB001 [where underground culvert daylights near Meadow Brook Rd (E of Pleasant St), Norwood & Meadow Brook at Sunnyside Rd] from 2011-2014 and 2017-2022 (n=5-8/yr). Analysis of the recent five years of the multi-year limited frequency dataset from this station indicated 5 out of 5 sufficient data yrs had intervals where >20% of the GMs were >126 CFU/100ml (2018-2022, 100%), 5 yrs had ≥2 samples exceed the 410 CFU/100ml STV (2018-2022, n=3-6) and cumulatively across years 100% of intervals had GMs >126 CFU/100ml, which is indicative of an Escherichia Coli (E. Coli) impairment.

## Monitoring Stations

Station Code	Organization	Type	Water Body	Station Description	Latitude	Longitude
W0548	MassDEP	Water Quality	Unnamed Tributary	[unnamed tributary to Neponset River, locally known as Meadow Brook. Sampled where it comes out of underground culvert near Meadow Brook Road (east of Pleasant Street), Norwood]	42.184422	-71.193827
NepRWA_MEB001	Neponset River Watershed Association	Water Quality	Meadow Brook Road	Meadow Brook @ Sunnyside Road	42.184667	-71.193980

**Secondary Contact Recreation**

<b>2024/26 Use Attainment</b>	<b>Alert</b>
Not Supporting	NO
<b>2024/26 Use Attainment Summary</b>	

The Secondary Contact Recreation Use for Unnamed Tributary (MA73-33) continues to be assessed as Not Supporting. The prior Escherichia Coli (E. Coli) impairment is being carried forward based on bacteria data not meeting the threshold at 1 combined station in 2018-2022. MassDEP and Neponset River Watershed Association (NepRWA) staff/volunteers collected *E. coli* bacteria samples in both the historic (1997-2010) & the current IR window (2011-2022) in this Unnamed Tributary to Neponset River (locally known as Meadow Brook) from 2008-2022 at 2 stations/combined stations. Samples were collected from the following stations/sample years from upstream to downstream: the upstream end of the AU at combined station W0548 & NepRWA\_MEB001 [where underground culvert daylight near Meadow Brook Rd (E of Pleasant St), Norwood & Meadow Brook at Sunnyside Rd] from 2008-2010 (historic n=5-6/yr) as well as 2011-2014 and 2017-2022 (current n=5-8/yr), and three-quarters of the way down at W1950 [~400 ft upstream of Dean St, Norwood] from Apr-Sep 2009 (n=5). Analysis of the recent five years of the multi-year limited frequency *E. coli* dataset from W0548 & NepRWA\_MEB001 indicated 5 out of 5 sufficient data yrs had intervals where >20% of the GMs were >244 CFU/100ml (2018-2022, 100%), 4 yrs had ≥2 samples exceed the 794 CFU/100ml STV (2018-2020 and 2022, n=3-6) and cumulatively across years 100% of intervals had GMs >244 CFU/100ml, which is indicative of an Escherichia Coli (E. Coli) impairment. It should be noted that data in the historic IR window for this AU were also indicative of an Escherichia Coli (E. Coli) impairment; i.e. at W0548 & NepRWA\_MEB001 100% cumulatively of the GM intervals >244 CFU/100ml for the multi year low frequency dataset and at W1950 100% of the GM intervals >244 CFU/100ml for the single year low frequency dataset.

**Monitoring Stations**

Station Code	Organization	Type	Water Body	Station Description	Latitude	Longitude
W0548	MassDEP	Water Quality	Unnamed Tributary	[unnamed tributary to Neponset River, locally known as Meadow Brook. Sampled where it comes out of underground culvert near Meadow Brook Road (east of Pleasant Street), Norwood]	42.184422	-71.193827
W1950	MassDEP	Water Quality	Unnamed Tributary	[unnamed tributary to the Neponset River locally known as 'Meadow Brook', approximately 400 feet upstream of Dean Street, Norwood]	42.179495	-71.188203

### Fish Consumption

<b>2024/26 Use Attainment</b>	<b>Alert</b>
Not Assessed	NO

<b>2024/26 Use Attainment Summary</b>
Fish toxics sampling has not been conducted recently, so the Fish Consumption Use for Unnamed Tributary (MA73-34) is Not Assessed.

### Aesthetic

<b>2024/26 Use Attainment</b>	<b>Alert</b>
Not Supporting	NO

<b>2024/26 Use Attainment Summary</b>
The Aesthetics Use for this Unnamed Tributary (MA73-34) locally considered part of Spring Brook, continues to be assessed as as Not Supporting with the prior Trash and Debris impairments being carried forward. No new data are available to evaluate the Aesthetics Use for this Unnamed Tributary AU.

## Primary Contact Recreation

2024/26 Use Attainment	Alert
Not Supporting	NO

2024/26 Use Attainment Summary
<p>The Primary Contact Recreation Use for Unnamed Tributary (MA73-34) continues to be assessed as Not Supporting. The prior Debris and Trash impairments (from the Aesthetics Use) are being carried forward. An Escherichia Coli (E. Coli) impairment is being added due to bacteria data not meeting the threshold at 1 station in 2018-2022. Neponset River Watershed Association (NepRWA) staff/volunteers collected <i>E. coli</i> bacteria samples three-quarters of the way down this Unnamed Tributary (locally considered part of Spring Brook) at NepRWA_SPB016 [Rt. 27, Walpole] from 2011-2014 and 2017-2022 (n=5-6/yr). Analysis of the recent five years of the multi-year limited frequency dataset from this station indicated 5 out of 5 sufficient data yrs had intervals where &gt;20% of the GMs were &gt;126 CFU/100ml (2018-2022, 50-100%), and while only 1 yr had ≥2 samples exceed the 410 CFU/100ml STV (2018, n=2), cumulatively across years 73% of intervals had GMs &gt;126 CFU/100ml, which is indicative of an Escherichia Coli (E. Coli) impairment.</p>

**Secondary Contact Recreation**

<b>2024/26 Use Attainment</b>	<b>Alert</b>
Not Supporting	NO

### 2024/26 Use Attainment Summary

The Secondary Contact Recreation Use for Unnamed Tributary (MA73-34) continues to be assessed as Not Supporting. The prior Debris and Trash impairments (from the Aesthetics Use) are being carried forward. An Escherichia Coli (E. Coli) impairment is being added due to bacteria data not meeting the threshold at 1 station in 2018-2022. MassDEP and Neponset River Watershed Association (NepRWA) staff/volunteers collected *E. coli* bacteria samples in both the historic (1997-2010) & the current IR window (2011-2022) in this Unnamed Tributary (locally considered part of Spring Brook) from 2008-2022 at 2 stations. Samples were collected from the following stations/sample years from upstream to downstream: three-quarters of the way down the AU at NepRWA\_SPB016 [Rt. 27, Walpole] from 2008-2010 (historic n=6/yr) as well as 2011-2014 & 2017-2022 (current n=5-6/yr), and close to the downstream end at W1952 [W of Neponset View Terrace, locally considered part of Spring Brook, ~420 ft upstream from confluence with the Neponset River, Walpole] from Apr-Sep 2009 (n=5). Since bacteria data from the historic IR window are all indicative of good water quality conditions, only the analysis from the current IR window (1 station) will be summarized here. Analysis of the recent five years of this multi-year limited frequency *E. coli* dataset from NepRWA\_SPB016 indicated 4 out of 5 sufficient data yrs had intervals where >20% of the GMs were >244 CFU/100ml (2018-2020 and 2022, 25-75%) and while only 1 yr had ≥2 samples exceed the 794 CFU/100ml STV (2018, n=2), cumulatively across years 42% of intervals had GMs >244 CFU/100ml, which is indicative of an Escherichia Coli (E. Coli) impairment.

# Unnamed Tributary (MA73-35)

<b>Location:</b>	Unnamed tributary to Beaver Brook, headwaters outlet small unnamed pond east of Moose Hill Street, Sharon to mouth at confluence with Beaver Brook, Sharon.
<b>AU Type:</b>	RIVER
<b>AU Size:</b>	0.5 MILES
<b>Classification/Qualifier:</b>	B

No usable data were available for Unnamed Tributary (MA73-35) for the 2024/26 Integrated Reporting cycle, therefore its category, use attainments, impairments, associated actions, and sources remain unchanged from the previous cycle.

<b>AU Category 2022</b>	<b>AU Category 2024/26</b>	<b>Impairment</b>	<b>ATTAINS Action ID</b>	<b>Impairment Change Summary</b>
2	2	None	--	Unchanged

## Unnamed Tributary (MA73-36)

<b>Location:</b>	Unnamed tributary locally known as "Davenport Creek" from Hallet Street, Boston to mouth at confluence with the Neponset River, Boston.
<b>AU Type:</b>	ESTUARY
<b>AU Size:</b>	0.01 SQUARE MILES
<b>Classification/Qualifier:</b>	SB: SFO

AU Category 2022	AU Category 2024/26	Impairment	ATTAINS Action ID	Impairment Change Summary
--	3	None	--	Unchanged

## Designated Use Attainment Decisions

### Fish Consumption

2024/26 Use Attainment	Alert
Not Assessed	NO

2024/26 Use Attainment Summary
Fish toxics sampling has not been conducted recently, so the Fish Consumption Use for Unnamed Tributary (MA73-36) is Not Assessed.

### Shellfish Harvesting

2024/26 Use Attainment	Alert
Insufficient Information	NO

2024/26 Use Attainment Summary
Unnamed Tributary (MA73-36): The total of all shellfish growing area classifications (MassGIS, 2024) within this AU is 0.0033 sq mi (53%). The sum of the approved, conditionally approved, and restricted shellfish growing areas represents 0 sq mi (0%). The prohibited shellfish growing area represents 0.0033 sq mi (53%). There is insufficient information available to assess the Shellfish Harvesting Use because the growing areas within this AU are classified as entirely prohibited.

### Shellfish Growing Area Classifications

MassDFG-Division of Marine Fisheries Shellfish Growing Area Classification Data (MassGIS 2024) (MassDEP Undated 7)

Area Name	Waterbody/Area Description	Classification	Area (Sq. Mi.)	Area (% of AU)
GBH3.0	Dorchester Bay And Neponset River	Prohibited	0.00327	52.6%

### Aesthetic

2024/26 Use Attainment	Alert
Not Assessed	NO

2024/26 Use Attainment Summary
No data are available, so the Aesthetics Use for Unnamed Tributary (MA73-36) is Not Assessed.

### Primary Contact Recreation

2024/26 Use Attainment	Alert
Insufficient Information	NO

2024/26 Use Attainment Summary
No bacteria data are available to assess the Primary Contact Recreation Use for Unnamed Tributary (MA73-36) so it is assessed as having Insufficient Information. The shellfish growing areas (0.0033 sq mi) in this AU are less than 100% approved (0 sq mi, 0%), which means that shellfish classification data were too limited to assess the Primary Contact Recreation Use of this Unnamed Tributary to Neponset River.

### Shellfish Growing Area Classifications

Summary Statement for MassDFG Shellfish Growing Area Classification Data (MassGIS 2024) (MassDEP Undated 7)

Summary
Unnamed Tributary (MA73-36): The total of all shellfish growing area classifications (MassGIS, 2024) within this AU is 0.0033 sq mi (53%). The approved shellfish growing area represents 0 sq mi (0%). Because the total of all shellfish growing area classifications is anything less than “approved”, the Primary Contact Recreational Use cannot be assessed for 2024 using the shellfish classification data.

### Secondary Contact Recreation

2024/26 Use Attainment	Alert
Insufficient Information	NO

2024/26 Use Attainment Summary

No bacteria data are available to assess the Secondary Contact Recreation Use for Unnamed Tributary (MA73-36) so it is assessed as having Insufficient Information. The shellfish growing areas (0.0033 sq mi) in this AU are less than 100% approved (0 sq mi, 0%), which means that shellfish classification data were too limited to assess the Secondary Contact Recreation Use of this Unnamed Tributary to Neponset River.

### ***Shellfish Growing Area Classifications***

**Summary Statement for MassDFG Shellfish Growing Area Classification Data** (MassGIS 2024) (MassDEP Undated 7)

<b>Summary</b>
----------------

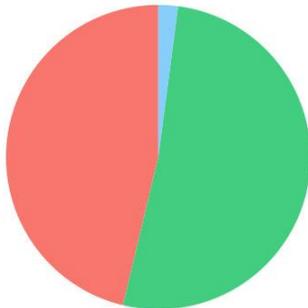

Unnamed Tributary (MA73-36): The total of all shellfish growing area classifications (MassGIS, 2024) within this AU is 0.0033 sq mi (53%). The approved shellfish growing area represents 0 sq mi (0%). Because the total of all shellfish growing area classifications is anything less than “approved”, the Secondary Contact Recreational Use cannot be assessed for 2024 using the shellfish classification data.

## Designated Use Attainment Decisions

### Fish Consumption

<b>2024/26 Use Attainment</b>	<b>Alert</b>
Not Assessed	No

<b>2024/26 Use Attainment Summary</b>
Fish toxics sampling has not been conducted recently, so the Fish Consumption Use for Unquity Brook (MA73-26) is Not Assessed.

### Aesthetic

<b>2024/26 Use Attainment</b>	<b>Alert</b>
Not Assessed	NO

**2024/26 Use Attainment Summary**

No data are available, so the Aesthetics Use for Unquity Brook (MA73-26) is Not Assessed.

**Primary Contact Recreation**

2024/26 Use Attainment	Alert
Not Supporting	NO

**2024/26 Use Attainment Summary**

The Primary Contact Recreation Use for Unquity Brook (MA73-26) continues to be assessed as Not Supporting. The prior Escherichia Coli (E. Coli) impairment is being carried forward based on bacteria data not meeting the threshold at 2 stations in 2018-2022. The prior Fecal Coliform impairment is also being carried forward. Neponset River Watershed Association (NepRWA) staff/volunteers collected *E. coli* bacteria samples in Unquity Brook from 2011-2022 at 2 stations. Samples were collected from the following stations/sample years, both close to the downstream end of the AU, from upstream to downstream as follows: NepRWA\_UNB014 [Adams St, Milton] from 2011-2014 and 2017-2022 (n=6/yr) and NepRWA\_UNB016 [Squantum St/Christopher Rd, Milton] from 2011-2014 and 2017-2022 (n=6/yr). Analysis of the recent five years of the multi-year limited frequency *E. coli* dataset from NepRWA\_UNB014 indicated 5 out of 5 sufficient data yrs had intervals where >20% of the GMs were >126 CFU/100ml (2018-2022, 100%), 5 yrs had ≥2 samples exceed the 410 CFU/100ml STV (2018-2022, n=3-6) and cumulatively across years 100% of intervals had GMs >126 CFU/100ml. Analysis of the recent five years of the multi-year limited frequency *E. coli* dataset from NepRWA\_UNB016 indicated 5 out of 5 sufficient data yrs had intervals where >20% of the GMs were >126 CFU/100ml (2018-2022, 75-100%), 5 yrs had ≥2 samples exceed the 410 CFU/100ml STV (2018-2022, n=3-5) and cumulatively across years 95% of intervals had GMs >126 CFU/100ml. The data from both NepRWA\_UNB014 and NepRWA\_UNB016 are indicative of an Escherichia Coli (E. Coli) impairment.

## Secondary Contact Recreation

<b>2024/26 Use Attainment</b>	<b>Alert</b>
Not Supporting	NO
<b>2024/26 Use Attainment Summary</b>	

The Secondary Contact Recreation Use for Unquity Brook (MA73-26) continues to be assessed as Not Supporting. The prior Escherichia Coli (E. Coli) impairment is being carried forward based on bacteria data not meeting the threshold at 2 stations in 2018-2022. The prior Fecal Coliform impairment is also being carried forward. MassDEP and Neponset River Watershed Association (NepRWA) staff/volunteers collected *E. coli* bacteria samples in both the historic (1997-2010) & the current IR window (2011-2022) in Unquity Brook from 2008-2022 at 3 stations. Samples were collected from the following stations/sample years, all very close to the downstream end of the AU, from upstream to downstream as follows: W0579 [Rowe St (just S of Adams St), Milton] from Apr-Sep 2009 (n=6), NepRWA\_UNB014 [Adams St, Milton] from 2008-2010 (historic n=6/yr) as well as 2011-2014 and 2017-2022 (current n=6/yr), NepRWA\_UNB016 [Squantum St/Christopher Rd, Milton] from 2008-2010 (historic n=6/yr) as well as 2011-2014 and 2017-2022 (current n=6/yr). Since bacteria data from the historic IR window are also indicative of poor water quality conditions, only the analysis from the current IR window (2 stations) will be summarized here. Analysis of the recent five years of this multi-year limited frequency *E. coli* dataset from NepRWA\_UNB014 indicated 5 out of 5 sufficient data yrs had intervals where >20% of the GMs were >244 CFU/100ml (2018-2022, 100%), 4 yrs had ≥2 samples exceed the 794 CFU/100ml STV (2018-2021, n=2-4) and cumulatively across years 100% of intervals had GMs >244 CFU/100ml. Analysis of the recent five years of this multi-year limited frequency *E. coli* dataset from NepRWA\_UNB016 indicated 5 out of 5 sufficient data yrs had intervals where >20% of the GMs were >244 CFU/100ml (2018-2022, 50-100%), 4 yrs had ≥2 samples exceed the 794 CFU/100ml STV (2018-2021, n=2-3) and cumulatively across years 80% of intervals had GMs >244 CFU/100ml. The data from both NepRWA\_UNB014 and NepRWA\_UNB016 are indicative of an Escherichia Coli (E. Coli) impairment.

## Designated Use Attainment Decisions

### Fish Consumption

2024/26 Use Attainment	Alert
Not Supporting	NO

2024/26 Use Attainment Summary
The Fish Consumption Use for Willet Pond (MA73062) continues to be assessed as Not Supporting and the prior Mercury in Fish Tissue impairment is being carried forward. MDPH included a site-specific advisory for Willet Pond in their January 2025 Freshwater Fish Consumption Advisory List. The public should refer to the most recent MDPH Freshwater Fish Consumption Advisory List for the most up to date meal advice for sensitive and general populations.

## Aesthetic

2024/26 Use Attainment	Alert
Not Assessed	NO

2024/26 Use Attainment Summary
No data are available, so the Aesthetics Use for Willet Pond (MA73062) is Not Assessed.

## Primary Contact Recreation

2024/26 Use Attainment	Alert
Fully Supporting	NO

2024/26 Use Attainment Summary
<p>The Primary Contact Recreation Use for Willet Pond (MA73062) is assessed as Fully Supporting based on bacteria data collected at 2 stations in 2018-2022. Neponset River Watershed Association (NepRWA) staff/volunteers collected <i>E. coli</i> bacteria samples in Willet Pond from 2018-2022 at 2 stations. Samples were collected from the following stations/sample years: NepRWA_WIP002 [Willet Pond, E end, Walpole] from 2011-2014 and 2017-2022 (n=3-6/yr) and also at NepRWA_WIP003 [Willet Pond, southern site, Walpole] from 2011-2014 and 2017-2021 (n=5-6/yr). Analysis of the recent five years of the multi-year limited frequency <i>E. coli</i> dataset from NepRWA_WIP002 indicated 1 out of 5 sufficient data yrs had intervals where &gt;20% of the GMs were &gt;126 CFU/100ml (2018, 50%), 0 yrs had <math>\geq 2</math> samples exceed the 410 CFU/100ml STV, and cumulatively across years 11% of intervals had GMs &gt;126 CFU/100ml. Analysis of the recent five years of the multi-year limited frequency <i>E. coli</i> dataset from NepRWA_WIP003 indicated 1 out of 5 sufficient data yrs had intervals where &gt;20% of the GMs were &gt;126 CFU/100ml (2019, 25%), 0 yrs had <math>\geq 2</math> samples exceed the 410 CFU/100ml STV, and cumulatively across years 5% of intervals had GMs &gt;126 CFU/100ml. <i>E. coli</i> data from both NepRWA_WIP002 and NepRWA_WIP003 meet 2024 CALM guidance.</p>

**Secondary Contact Recreation**

<b>2024/26 Use Attainment</b>	<b>Alert</b>
Fully Supporting	NO

**2024/26 Use Attainment Summary**

The Secondary Contact Recreation Use for Willett Pond (MA73062) is assessed as Fully Supporting based on bacteria data collected at 2 stations in 2018-2022. Neponset River Watershed Association (NepRWA) staff/volunteers collected *E. coli* bacteria samples in both the historic (1997-2010) & the current IR window (2011-2022) in Willett Pond from 2008-2022 at 2 stations. Samples were collected from the following stations/sample years: NepRWA\_WIP002 [Willett Pond, E end, Walpole] from 2008-2010 (historic n=4-6/yr) as well as 2011-2014 and 2017-2022 (current n=3-6/yr) and NepRWA\_WIP003 [Willett Pond, southern site, Walpole] from 2008-2010 (historic n=4-6/yr) as well as 2011-2014 and 2017-2021 (current n=5-6/yr). Since bacteria data from the historic IR window are all indicative of good water quality conditions, only the analysis from the current IR window will be summarized here. Analysis of the recent five years of the multi-year limited frequency *E. coli* datasets from both NepRWA\_WIP002 & NepRWA\_WIP003 indicated 0 out of 5 sufficient data yrs had intervals where >20% of the GMs were >244 CFU/100ml, 0 yrs had ≥2 samples exceed the 794 CFU/100ml STV, and cumulatively across years 0% of intervals had GMs >244 CFU/100ml. *E. coli* data from both stations NepRWA\_WIP002 and NepRWA\_WIP003 meet 2024 CALM guidance.

## Woods Pond (MA73055)

<b>Location:</b>	Stoughton.
<b>AU Type:</b>	FRESHWATER LAKE
<b>AU Size:</b>	14 ACRES
<b>Classification/Qualifier:</b>	B

No usable data were available for Woods Pond (MA73055) for the 2024/26 Integrated Reporting cycle, therefore its category, use attainments, impairments, associated actions, and sources remain unchanged from the previous cycle.

<b>AU Category 2022</b>	<b>AU Category 2024/26</b>	<b>Impairment</b>	<b>ATTAINS Action ID</b>	<b>Impairment Change Summary</b>
