# A Predatory and Broken Market: the January 2025 Update Analysis of the Individual Residential Electric Supply Market in Massachusetts

A Report by the Massachusetts Attorney General's Office Prepared by Timothy E. Howington January 2025

# **Executive Summary**

This January 2025 Update ("2025 Update") follows the prior reports by the Massachusetts Attorney General's Office ("AGO") on the individual residential electric supply market in Massachusetts. This update provides an analysis of the actual rates charged by suppliers to residential consumers for the July 2023–June 2024 period. The updated analysis shows that Massachusetts consumers who relied on competitive suppliers for their electricity experienced **\$651.3 million** in net losses in comparison to basic service rates since the AGO began reporting on this market in 2018, including net losses of **\$73.7 million** in the July 2023–June 2024 period. Accordingly, in eight of the nine years evaluated by the AGO, competitive supply consumers experienced net losses.

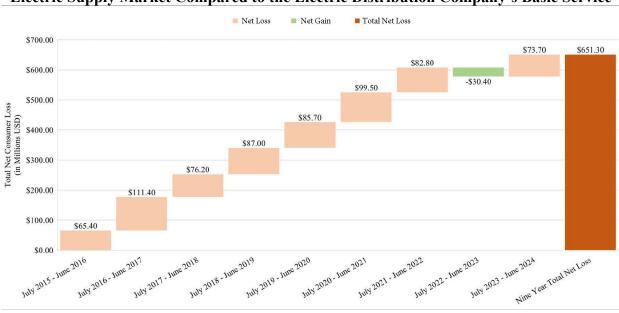

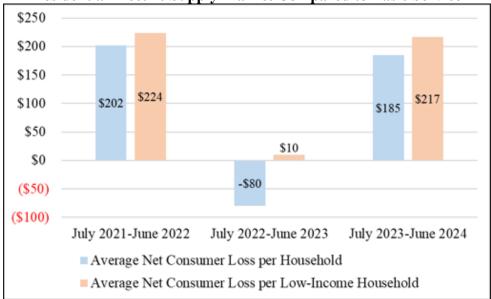

Figure ES.1. Net Consumer Loss from Participation in the Individual Residential Electric Supply Market Compared to the Electric Distribution Company's Basic Service

This 2025 Update demonstrates that competitive electric supply rates are neither cost-effective nor equitable. Between July 2023 and June 2024, most competitive electric supply consumers paid more for their electricity compared to the basic service rate, with low-income residential consumers on competitive electric supply plans paying *more* than non-low-income consumers. As discussed in the 2024 Update, even during the unprecedented 2022–2023 winter season, when record-high basic service rates triggered by macroeconomic conditions presented an ideal opportunity for the individual residential electric supply market to provide consumers with savings, low-income consumers of individual suppliers continued to experience net losses. Further, to the extent that some individual suppliers provided temporary and modest relief to consumers during that unprecedented time of sky-high basic service rates, the AGO's July 2023–June 2024 analysis demonstrates a swift return to business as usual, with the broken and predatory individual residential competitive supply market causing significant harm to consumers, and low-income consumers in particular.

Table ES.1. Average Annual Net Consumer Loss from Participation in the Individual Residential Electric Supply Market Compared to Basic Service

	July 2021 - June 2022	July 2022 - June 2023	July 2023 - June 2024
Average Net Consumer Loss per Household	\$202	-\$80	\$185
Average Net Consumer Loss			
per Household - Low-Income	\$224	\$10	\$217

Figure ES.2. Average Annual Net Consumer Loss from Participation in the Individual Residential Electric Supply Market Compared to Basic Service

Indeed, as basic service rates stabilized following the 2022–2023 winter, all consumers – and, in particular, low-income consumers – experienced net losses. As shown in Figure ES.1, rates charged by suppliers reverted to the "norm," with both non-low-income and low-income consumers in this market experiencing net losses as compared to basic service.

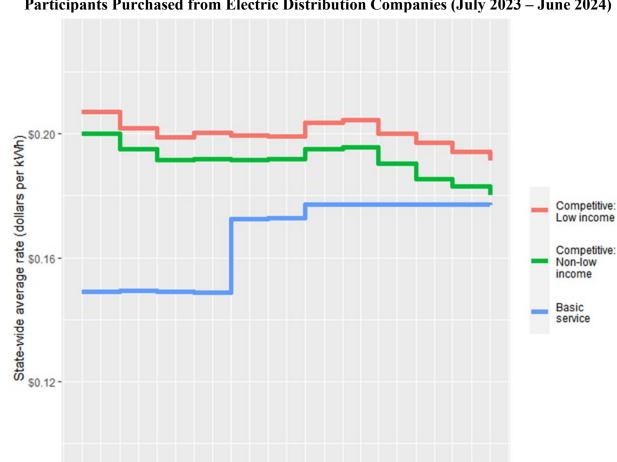

Figure ES.3 Gap Between Average Rate Paid to Competitive Suppliers and Rate Had Participants Purchased from Electric Distribution Companies (July 2023 – June 2024)

The 2025 Update adds further confirmation to the simple truths established in the AGO's previous analyses – the individual residential electric supply market in Massachusetts causes significant harm to most consumers, where any savings that consumers may experience are typically short-lived and canceled out by much bigger losses. At a time when many households struggle to afford groceries and pay bills, the market further burdens consumers, particularly those who are most vulnerable. The Legislature must act to protect our consumers by ending the individual residential electric supply market.

Number of Suppliers	3	5	4	6	3	10

<sup>\*</sup>The analysis in Figure 3.1 assumes the same average annual usage between low-income and non-low-income households for the sake of an apples-to-apples comparison. Actual consumer losses depend on consumers' usage, their choice of supplier, and the rate that the supplier charges (individual suppliers charge a wide range of rates to their various consumers).

# Appendix ES.1. Experience and Qualifications of Timothy E. Howington

# **Experience and Qualifications of Timothy E. Howington**

Timothy E. Howington is an analyst with over twenty years of experience in a variety of disciplines, including economic development, utility regulation, and geospatial modelling. From 2001 to 2003 Mr. Howington led research efforts at Massachusetts Development Finance Agency, Massachusetts' quasi-public economic development authority. His duties in that position included creating location cost comparisons, evaluating tax structures and incentive programs for businesses, and contributing to economic impacts analyses.

Since 2003, Mr. Howington has contributed to numerous telecommunications and energy regulatory proceedings at the state and federal level addressing topics of concern to utility consumers, including market concentration and industry consolidation, differentials in product availability and service quality, and pricing.

Since 2012, Mr. Howington has contributed to the development of spatially-aware and cartographic solutions for the insurance, reinsurance, agriculture, and supply chain industries. Mr. Howington earned an M.S. in Geo-Information Science from Salem State University, an M.A. in Economics from Boston University, and a B.A. in Near Eastern Languages and Civilizations from the University of Chicago.
