

Advancing Massachusetts Power

Energy Storage Grant Program

The objective of the Advancing Massachusetts Power (AMP) energy storage grant program is to accelerate the safe and equitable deployment of energy storage systems (ESS) across the Commonwealth by prioritizing investments that deliver resilience, pollution reduction, economic opportunity, and health benefits to the Commonwealth – especially in communities facing the greatest environmental, health, and economic burdens.

DOER intends to award approximately \$47 million in grants through the AMP program to support the development of projects under three program tracks:

- **Community Resilience** will support the installation of small- and medium-sized behind-the-meter (BTM) ESS that can provide power critical facilities or community resilience hubs that serve a facility or community, with an emphasis on resilience and community benefits. The Community Resilience track will have an approximate budget of \$22-26M for approximately 10 to 30 projects, and a maximum of \$2.5M per project. The Community Resilience track will have two opportunities to pursue funding:
 - **Project Implementation (Path 1)** Projects which are ready to proceed directly with implementation. The Path 1 application deadline is March 13, 2026.
 - **Preconstruction support (Path 2)** Projects seeking support for feasibility studies to assess project viability prior to applying for implementation funding. The Path 2 application deadline is January 23, 2026.
- **Long Duration Energy Storage** will promote the near-term deployment and commercialization of 10-plus hour LDES projects to de-risk non-commercialized technologies and expand reliable storage and safe operation of demonstrated use cases. The LDES track will have an approximate budget of \$20-22M for approximately three to five projects, and a maximum of \$5M per project. The LDES application deadline is March 13, 2026.
- **Safety and Education** will support the safe deployment of ESS by equipping Authorities Having Jurisdiction, regional planning boards, and emergency response departments with knowledge, tools and best practices around ESS' reasonable risks and emergency response protocols. The Safety and Education track will have an approximate budget of \$2-3M for five to 20 projects, or a maximum of \$800k per project. The Safety and Education application deadline is March 13, 2026.
