In addition to the approved list, pursuant to the provisions of **M.G.L. c. 140**, the Colonel of the Department of State Police has determined that locks provided by the manufacturer of firearms, or

large capacity weapons, both as defined in **Section 121 of Chapter 140**, sold within the Commonwealth, that are designed to prevent the discharge of such weapon by unauthorized users shall be deemed as approved locks for the purpose of complying with the provisions of **M.G.L. c.140, § 131K**.

M.G.L. c. 140, § 131K states that all sales of firearms and large capacity weapons in Massachusetts MUST include a safety device approved by the colonel of state police. This requirement applies to any seller including a wholesaler. The seller is not required to install the device so long as the weapon is accompanied by it. Failure to comply with this provision will constitute a breach of warranty and an unfair trade practice. This section does not apply to non-large capacity rifles and shotguns. Sellers should ensure that the safety device is appropriate for the weapon being sold.

Responsible firearms owners must recognize the need and be aware of the methods of securing and childproofing their firearms, whether or not they have children. ***Not all gunlocks work on all guns and no lock is appropriate for all of the different types of firearms that exist.*** *Owners must make sure that their locks are appropriate for the gun it is used with. Please make every effort to ensure that locks fit properly and make the gun mechanically inoperable and test the fit and functionality of the lock. Trigger locks often come into direct contact with the trigger and should never be installed on loaded guns. In addition, it is strongly recommended that firearms owners* ***store all guns unloaded*** *and store the ammunition separately.*
