Total	21354.6	

* Areas mapped as granite and pegmatite are located outside of the USGS SIR 2011-5013 study area. Although no precise uranium probability values exist for these bedrock units, these types of bedrock generally have an increased probability of containing naturally occurring radionuclides such as radium, uranium, or radon in well water at concentrations exceeding public drinking water limits.

Map Location

ATHOL
FALLS WITHIN THE
MassDEP WESTERN REGION

This map is for illustrative purposes only.
It represents the best statewide data
available at the date of printing. There
are other important natural resources
that are not shown on this map because
the digital spatial data do not exist.

DATA SOURCES

HYDROGRAPHY: USGS/MassGIS, 1:25,000 or less. Hydrography from the USGS National Hydrography Database except within public water supply watersheds where the resolution is approximately 1:100,000. Elevation generated from digital ortho DTMs.

TOPOGRAPHIC CONTOURS: MassGIS, 1:5,000, 3 Meter contour intervals.

POLITICAL BOUNDARIES: MassGIS. This political boundary dataset has been created from latitude and longitude coordinates found in the 68 volume Historic and Land Commission Town Boundary Atlas.

ROADS: Mass Department of Transportation 1:50,000. Road centerlines aligned with 1:50,000 OrthoPhotos. Attributes from DOT roads database.

TRAINS AND TRANSIT LINES: Mass Department of Transportation. Tracks at 1:50,000. Routes and Powerlines at 1:25,000.

GEOGRAPHIC FEATURES: USGS/MassDEP. USGS Geographic Names Information System (GNIS) features matched to parcel data or orthophoto. Hydrography names taken from GNIS features and placed using MapInfo.

WETLANDS: USGS Resource Mapping Project/USGS/MassDEP/MassGIS. Source Scale 1:12,000 to 1:40,000. Wetland information shown on this map consists of several wetlands datasets, including DEP Orthophoto Wetlands (1:12,000) and USGS Hydrology wetlands (1:25,000).
