

Bedrock Water Quality Map

LEOMINSTER

Uranium Probability

This map is intended to complement the USGS Scientific Investigations Report 2011-5013, Arsenic and Uranium in Water from Private Wells Completed in Bedrock of East-Central Massachusetts: Concentrations, Correlations with Bedrock Units, and Estimated Probability Maps. That report presents the results of a statistical study of bedrock water quality based primarily on 478 samples from private wells. This is a relatively small number of samples for such a large and diverse study area. The confidence intervals around probabilities used here are broad. Users are urged to carefully read the original report.

The geologic map underlying this work is at a scale of 1:250,000 or about 4 miles per inch. Although presented on a two dimensional map, bedrock geology is a three dimensional phenomenon. Contact zones almost never go straight down. Because this town map is at a much larger scale than the original, the necessity of presenting 3D geology in only two dimensions, and the wide confidence intervals in the statistical analysis, users should interpret this map as a general indicator of expected water quality. The only way to be sure of the quality of water in any given well is to have that water tested.

% Probability of Exceeding the
Public Drinking Water Standard
of 30 Micrograms per liter (30 PPB)

City/Town Statistics

Acres Percent

1415.3	7.5
10978.2	57.8
0	0
5813.7	30.6
0	0
No Data	786.9
Total	18994.1

* Areas mapped as granite and pegmatite are located outside of the USGS SIR 2011-5013 study area. Although no precise uranium probability values exist for these bedrock units, these types of bedrock generally have an increased probability of containing naturally occurring radionuclides such as radium, uranium, or radon in well water at concentrations exceeding public drinking water limits.

MAP LEGEND

- Pond, Lake or Ocean
- Reservoir
- Fresh Water Wetlands
- Cranberry Bog
- Salt Water Wetlands
- Perennial Stream; Shoreline
- Intermittent Stream
- Intermittent Shoreline
- Ditch/Canal
- Aqueduct
- Dam
- Pipeline
- Powerline
- Active Rail Lines
- Limited Access Highway
- Multi-lane Hwy, Not Limited Access
- Other Numbered Highway
- Major Road, Collector
- Minor Road, Ramp
- MA Town Boundary

DATA SOURCES

TOPOGRAPHIC CONTOURS: MassGIS, 1:5,000, 3 Meter contour elevations, generated from digital ortho DTMs.
WETLANDS: USACE National Wetlands Inventory (NWI) data, 1:250,000 scale, derived from aerial photography and field data.
GEOGRAPHIC FEATURES: USGS/MADEP, USGS Geographic Names Information System (GNIS) features matched to parcel data or orthophoto. Hydrography names taken from USGS NFD features and placed using MapInfo.

HYDROGRAPHY: USGS/MADEP, 1:25,000 or less. Hydrography from the USGS National Hydrography Database except within public water supply watersheds where the resolution is approximately 1:10,000.
POLITICAL BOUNDARIES: MassGIS. The political boundary data layer has been created from latitude and longitude coordinates found in the 68 volume border and Land Commission Town Boundary Atlas (1:25,000).
ROADS: Mass Department of Transportation 1:5000. Road centerlines aligned with 1:5000 Orthophotos. Attributes from DOT roads database.
TRANSITS AND TRANSLINES: Mass Department of Transportation Trans @ 1:5000. Pipelines and Powerlines @ 1:25000.

This map is for illustrative purposes only. It represents the best statewide data available at the date of printing. There are other important natural resources that are not shown on this map because the digital spatial data do not exist.
