

Resource Management Plan Berkley State Forest

Adopted by the DCR Stewardship Council **Month**, 2023

Massachusetts Department of Conservation and Recreation
Division of Conservation and Resource Stewardship
Office of Cultural Resources

Purpose

Resource Management Plans (RMPs) are foundational documents that identify a park, forest, or reservation's defining natural, cultural, and recreational resources and identify potential threats and opportunities to guide DCR's continued stewardship of the property and to inform future decisions about the property in a way that celebrates and preserves its identity.

RMPs are prepared for "all reservations, parks, and forests under the management of the department." (M.G.L. Chapter 21: Section 2F) These plans "shall include guidelines for the operation and land stewardship of the aforementioned reservations, parks and forests, shall provide for the protection and stewardship of natural and cultural resources and shall ensure consistency between recreation, resource protection, and sustainable forest management." DCR finalizes RMPs following a public process and adoption by the DCR Stewardship Council.

Maura T. Healey, Governor

Kimberley Driscoll, Lieutenant Governor

Rebecca L. Tepper, Secretary

Brian M. Arrigo, Commissioner

The Massachusetts Department of Conservation and Recreation (DCR), an agency of the Executive Office of Energy and Environmental Affairs, oversees 450,000 acres of parks and forests, beaches, bike trails, watersheds, dams, parkways, and over 100 National Register listed properties. The agency's mission is to protect, promote, and enhance our common wealth of natural, cultural, and recreational resources for the well-being of all.

DCR honors Indigenous communities for their care, throughout many generations, of the land that DCR now stewards on behalf of the people of the Commonwealth. DCR embraces this legacy of stewardship, fostering a sense of shared responsibility by all people for protection of the waters, lands and living things for the enjoyment and appreciation of all.

To learn more about the DCR, its facilities, and programs please visit us www.mass.gov/dcr. Contact us at mass.parks@state.ma.us.

INTRODUCTION

Berkley State Forest (Berkley or the Forest) is located in the Town of Berkley, approximately 40 miles south of Boston and 20 miles east of Providence, Rhode Island, within the Bristol Lowlands/Narragansett Lowlands Ecoregion. It is easily accessible from I-495 and Route 44 and is approximately 3 miles northeast of Dighton Rock State Park. Berkley is located between a residential neighborhood to the north, west, and south, and Route 24 to the east.

The Forest is on land shaped by generations of Indigenous and Indigenous and non-Indigenous inhabitants. Past and present Indigenous residents embody fluid, relational connections to the places and spaces now known as Berkley State Forest. Indigenous groups and individuals, including peoples known as the Massachusetts, Pokanoket, and Wampanoag are recorded in available documentation (Native Land Digital 2023) as having relationships to this place over seasons and generations. The “Berkley area, particularly Assonet Neck, was a heavily populated native settlement area,” with “Contact Period settlement...concentrating along the eastern Shore of the Taunton River.” (Massachusetts Historical Commission (MHC) 1981). Following Native American dispossession, the Town of Berkley was incorporated in 1735, with additional lands added between 1799 and 1879 by annexing portions of adjacent communities (MHC 1981). The Forest was established as a “reforestation lot” in 1918 (Rane 1919). Under Chapter 478 of the Acts of 1908, the State Forester was authorized to purchase land and manage it for forest growth, water protection, and examples of scientific forestry with a 10-year option for reacquisition by the previous landowner (Massachusetts General Court (MGC) 1908). Reforestation lots that were not reacquired by the previous landowner, such as Berkley, were incorporated into the state forest system. In 1931, the Massachusetts General Court designated all remaining Commonwealth-owned lands from this program as state forests (MGC 1931). Berkley was originally a 12-acre lot and is listed as such in annual reports through 1955 (Department of Natural Resources 1955). However, by 1958 it had decreased in size to 6 acres for reasons that could not be determined during the preparation of this plan (Commonwealth of Massachusetts, Senate 1958).

Berkley is a small parcel of permanently protected forested, open space atop Bryant Hill in an otherwise residential neighborhood. Vehicle access is from Briggs Lane (a dead-end road) and the Forest provides limited hiking, dog walking, and nature study opportunities. Berkley is primarily of local importance, with most visitors believed to originate from nearby residences. Visitors find the woods to be a beautiful and peaceful place to visit. The Forest has no recreational development or visitor amenities.

PARK IDENTITY AND SIGNIFICANCE

Berkley State Forest’s small size and gentle topography make for a short, easy walk through a forested landscape. This suburban state forest protects common natural resources and offers opportunities to engage in passive recreation. Berkley’s significance lies not only in its value as an individual property, but also in its role as part of the larger state forest system. Collectively these forests provide significant social, environmental, and economic benefit, such as plant and wildlife habitat, carbon sequestration, and settings for outdoor recreation. Future uses and development of Berkley should be consistent with its identity as Woodland that provides locally significant open space with limited passive recreation.

Berkley is significant for the following reasons:

- It is the smallest State Forest in the Commonwealth of Massachusetts.
- It provides permanently protected, forested open space in a town where only 2% of the land is set aside for open space and recreational use (Town of Berkley, Massachusetts and the Southeastern Regional Planning and Economic Development District 2020).

DEFINING RESOURCES AND VALUES

Resources that define the Berkley are related to its forested uplands. They include:

- The Forest provides habitat for common plants and wildlife.

- The Forest provides opportunities for passive recreation.

INTERPRETIVE THEMES

Managing our state forests for diversity and resilience leads to a healthier environment for us to live in and enjoy. There are six interpretive Sub-themes, they are:

- Beyond the original intents of timber harvesting and fire control, DCR's forest management objectives have changed over time to include forest resiliency, water quality, diverse wildlife habitats, carbon sequestration, and public safety.
- Economic concerns played a significant role in the reforestation of Massachusetts. The establishment of the state forest system returned tens of thousands of acres of "economically barren lands" to forestland and protected them from future development.
- State forests were partly created to lessen the Commonwealth's dependency on out of state lumber and to support industry in Massachusetts. Early forest management strategies were driven by productivity and economics. As the science evolved, increased consideration was given to the environmental impacts of a site-specific forest management project. In some cases, other objectives, such as improving wildlife habitat or to enhance forest health might be the primary reason for a particular project.
- Though foresters recognized that forest management could enhance recreational activities, when they created the state forests, recreation was a secondary motivation. State forests were viewed as opportunities to provide a "wilder" recreational experience in contrast to "planned," more landscaped parks. Prior to 1933, only three parks offered recreational facilities. Over time the focus on recreation grew to the point where it is the most visible function of the Agency.
- Massachusetts' state forest system was founded on the principles of scientific forest management. These practices contrasted with the un-managed destructive cutting practices common throughout the country at the time. Management focused on the long-term cultivation of forests to achieve a sustainable harvest. Foresters worked to maximize production and provide a sustained yield over time, aiming for long-term stewardship over short term profits. Management of state forests also served as a model for private landowners.
- Unique to Massachusetts, the reforestation lot program let landowners sell their land to the state for reforestation. Within 10 years of the sale, they could repurchase the land at the cost of the initial purchase price plus the cost of improvements and maintenance. Unclaimed lots ended up as part of the State Forest system resulting in a system with parcels of varying sizes all over the state.

VISITOR EXPERIENCE

Due to its size, and relatively homogeneous vegetation, Berkley State Forest provides limited visitor experiences, including:

- **Virtual Visitor Experience.** Potential visitors will find little information about Berkley State Forest on DCR's web site. The "Find a Park" tool (<https://www.mass.gov/info-details/find-a-park>) identifies the Forest's location and lists Hiking/Walking as activities that visitors may enjoy here. There is no additional information to help potential visitors plan a trip.
- **Entering the Park.** There is no formal gateway. Visitors arriving by car can identify the Forest by its Identification Sign along Briggs Lane and park on the adjacent road shoulder. Local visitors that arrive on foot from nearby residences may enter the Forest from any point along its boundary with Briggs Lane.
- **Trail-based Passive Recreation.** The small forest provides visitors the opportunity to go for a brief walk and offers a calming and peaceful escape from daily life.

THREATS AND OPPORTUNITIES

The following information identifies potential threats to the park's natural and cultural resources and identifies opportunities to enhance their protection and stewardship. Although not considered a resource under statute (M.G.L. Part I, Title II, Chapter 21, Sections 2F), recreation is also included below because it is an important part of the park-going experience, helps define a park's values, and is a key part assessing the consistency of activities taking place in the Commonwealth's forests, parks, and reservations.

Threats and opportunities identified below are used to inform the development of management recommendations. Potential recommendations must meet prioritization criteria to be included in the Priority Recommendations table, page 14.

Natural Resources

Threats

- Due to Berkley's small size and staffing limitations, there is little active management of the property.
- There is no information on the presence or distribution of invasive plants in the Forest. Such information is needed to determine if any sensitive resources are being impacted by invasive plants.
- The property is subject to illegal dumping of trash and yard waste, which may introduce invasive plants.

Opportunities

- An increased presence by DCR would help discourage depreciative activities.
- Promoting the property as a research location for nearby schools or forestry programs could increase awareness of Berkley, provide a partnership for management, and increase knowledge of the park's resources.

Cultural Resources

Threats

- Unauthorized OHV use has the potential to disturb below ground resources.

Opportunities

- No opportunities were identified.

Recreation

Threats

- There are no official public walking trails. User-created trails are not maintained and have obstructions such as large rocks and woody debris.
- The DCR sign identifying Berkley as a state forest leads visitors to explore the park with the belief that there may be a trail system or some type of infrastructure at the forest.
- There is no official information available on Berkley State Forest. DCR's webpage does not include information on the Forest, making it difficult for potential visitors to become aware of the property and its recreational opportunities.

Opportunities

- Creating an official, maintained trail would allow visitors to explore the Forest safely and would avoid having visitors unintentionally venture into private property or creating their own trails.
- Installing a Welcome Wayside panel would help inform visitors about the park, its resources, and associated recreation opportunities.
- Adding information on Berkley State Forest to DCR's web page would allow potential visitors to become aware of the Forest, its resources, and associated recreation opportunities.

Climate Change

Climate change impacts nearly every aspect of DCR's properties, from ecosystem health, to infrastructure, to recreation. The Department is actively working to mitigate and adapt to current and future impacts through such actions as forest management, decarbonizing DCR's buildings and vehicles, protecting wetlands, and using nature-based solutions to minimize stormwater impacts. Information on these, and other, efforts is incorporated into RMPs as available and appropriate.

DCR manages its forests to provide a range of ecosystem services such as recreation, clean water, wood commodities, and wildlife habitat (DCR 2020). For ecosystems under its management, DCR carefully considers both their vulnerability to climate change and their ability to mitigate the effects of climate change by storing carbon in ecosystems and harvested wood products. Several approaches are used to monitor DCR forests and to design forest management strategies to adapt to climate change and provide ecosystem services. (See Swanston et al. (2016) for information on adaptation strategies and approaches associated with DCR's forest management.) Established in 1957, DCR's Continuous Forest Inventory System (CFI) uses a network of more than 2,000 permanent plots on which repeated measurements are taken on an ongoing basis. The CFI measures the status, size, and health of over 100,000 trees; other vegetation; down woody material; and the forest floor. (See DCR 2014 for additional information on the CFI System.) This information helps DCR understand at a strategic scale the current character, condition, and trends of forest ecosystems under its care. DCR also uses operational inventory to help plan specific treatments and evaluate their outcomes. Using these different scales of information, remotely sensed data, and local and regional external expertise, DCR plans projects that help its stands, forests, and other lands adapt to climate change and mitigate greenhouse gas emissions. For additional information on the relationship between DCR's forest management practices and climate change, please see pages 77–85 in *Massachusetts Forest Action Plan 2020* (DCR 2020) and *Managing Our Forests...For Carbon Benefits* (<https://www.mass.gov/info-details/managing-our-forests-for-carbon-benefits>).

The Department is actively assessing the vulnerability of its properties and facilities to the anticipated impacts of climate change. A Climate Change Vulnerability Assessment (CCVA) will be used by DCR to enhance park operations and maintenance, inform resilient investment, and provide a framework for hazard mitigation and climate adaptation for natural resources, cultural resources, buildings, facilities, and other infrastructure. Property-specific climate change information derived from the CCVA is included in the RMP dashboard (see Climate Change (by 2070)).

Climate Exposure

During the preparation of Resource Management Plans some resources may be identified as having particularly high exposure to the anticipated impacts of climate change. When this occurs, these resources are described in the RMP.

No resources with particularly high exposures to climate change are known from this Forest.

Applied Land Stewardship Zoning

DCR assesses the appropriate uses and stewardship of its properties at two spatial scales: the landscape level and the property level.

Landscape Designation

In 2012, DCR engaged in a comprehensive system-wide assessment of lands managed by its Division of State Parks and Recreation, designating them as Reserve, Woodland, or Parkland. (See *Landscape Designations for DCR Parks & Forests: Selection Criteria and Management Guidelines* (DCR 2012) for details.) Multiple Landscape Designations may apply to parks with diverse resources and levels of development. All of Berkley State Forest was designated Woodland. Identification of Land Stewardship Zones within Berkley State Forest was performed in the context of the Woodland Landscape Designation

The following Land Stewardship Zoning is recommended to guide management and any future development. (See Land Stewardship Zoning map, page 11.)

Zone 1

Zone 1 areas have highly sensitive ecological and/or cultural resources that require additional management approaches and practices to protect and preserve these special features and their values (DCR 2012). The following areas of Berkley State Forest have been designated Zone 1.

- No sections of Berkley have been designated Zone 1.

Zone 2

Zone 2 areas provide for a balance between resource stewardship and recreational opportunities that can be appropriately sustained. They include stable yet important cultural and natural resources. These areas provide a buffer for sensitive resources, recharge areas for surface and groundwaters, and large areas where existing public recreation activities can be managed at sustainable levels (DCR 2012). The following areas of Berkley State Forest have been designated Zone 2.

- All of the Forest has been designated Zone 2.

Zone 3

Zone 3 areas include altered landscapes in active use and areas suitable for future administrative, maintenance, and recreation areas (DCR 2012). The following areas of Berkley State Forest are currently developed, appropriate for potential future development, or intensively used for recreation.

- No sections of Berkley have been designated Zone 3.

Significant Feature Overlay

Significant Feature Overlays provide precise management guidance to maintain or preserve recognized resources features regardless of the Land Stewardship Zone in which they occur.

- There are no Significant Feature Overlays associated with this Forest.

DCR Stewardship Map Tool

This RMP should be viewed in conjunction with DCR's Stewardship Map, a GIS-based tool that allows users to view a property's natural, cultural, and recreational resources. The Stewardship Map tool is dynamic, and information continues to be updated after adoption of an RMP. Guidance for using the tool, as well as Best Management Practices for resource stewardship, are located on the Stewardship Map site: <https://dcrgis-mass-coeea.hub.arcgis.com/>.

Consistency Review

Resource Management Plans "shall ensure consistency between recreation, resource protection, and sustainable forest management" (M.G.L. Part 1, Title II, Chapter 21, Section 2F). For planning purposes, an activity is considered consistent with resource protection if it has no significant, long-term, adverse impact on resources. To this end, a series of indicators were developed to evaluate the impacts of recreation and forest management on natural and cultural resources.

Many activities with the potential to negatively affect resources are already subject to agency and/or regulatory review (e.g., forest management activities, projects within Priority Habitat). For these activities, compliance with state regulations, regulatory authority guidance, DCR policies and processes, and Best Management Practices (BMPs) is considered an indicator of consistency between park use and resource protection. New indicators were generated for activities not subject to agency or regulatory review, and are based on available data, information readily identifiable via aerial imagery or site visits, assessments by DCR subject matter experts, or the property manager's knowledge of park conditions and use. (See Consistency Assessment, page 12.)

Indicators are applied during the RMP planning process to ensure a standardized assessment of consistency across all properties in the DCR system. Inconsistencies identified via the application of indicators are used to inform the development of management recommendations.

The status of indicators (Yes, No, and N/A) were accurate at the time this RMP was prepared and were used for planning purposes. ***However, they represent a snapshot in time and may not reflect future conditions.*** In addition, the status of indicators will change as recommendations get implemented.

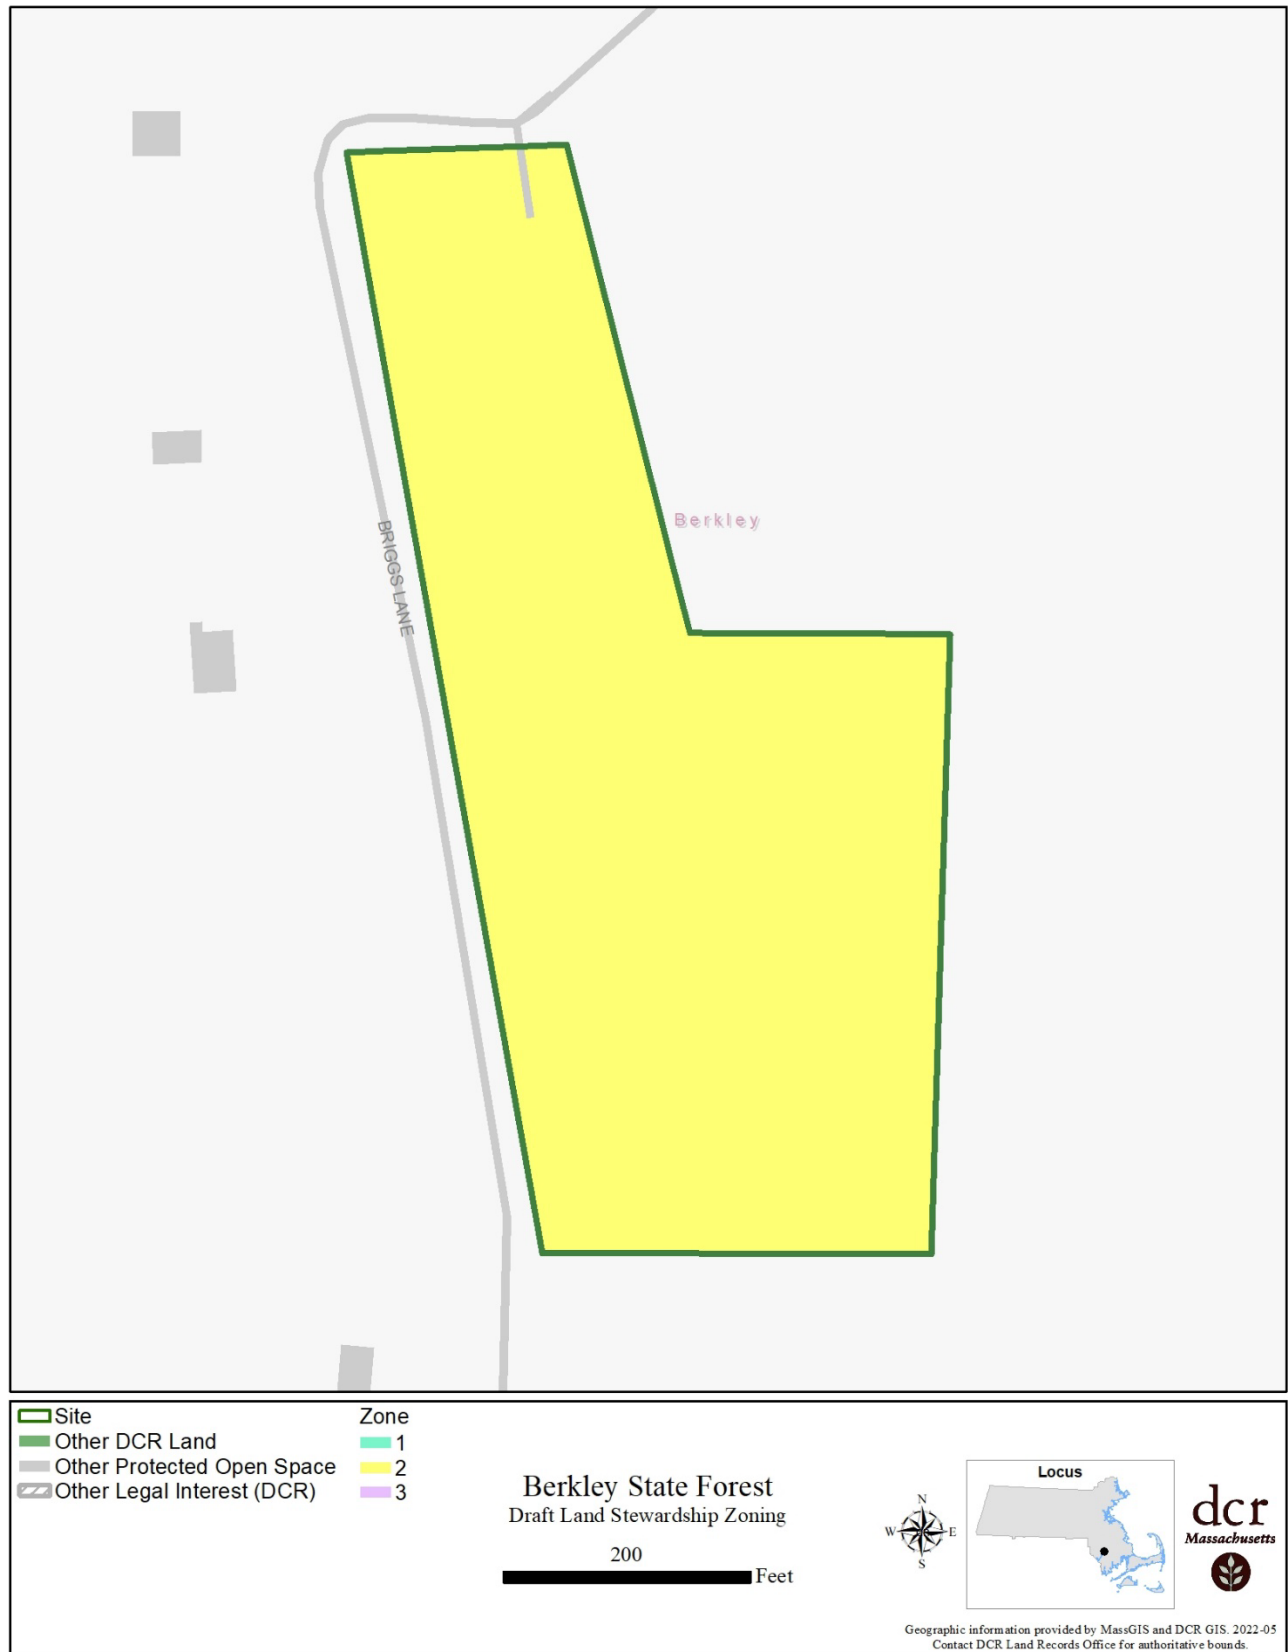

Management Recommendations

Four priority management recommendations were developed for the Forest. They are presented in the table Priority Recommendations for Berkley State Forest, page 14. All recommendations are of equal importance.

Priority management recommendations derive from Threats, Opportunities, and Consistency Assessment information presented in this RMP. For a recommendation to be considered a priority and listed in the table, it must meet one or more of the criteria listed below. Maintenance and management needs not meeting one or more of these criteria are not included in the table but are identified in the Threats and Opportunities sections.

The following types of recommendations are considered priority:

- Natural resource stewardship and restoration activities consistent with park identity and intended to improve ecological function and connectivity.
- Cultural resource management activities consistent with park identity and intended to prevent the loss of integrity of significant cultural resources.
- Improvements consistent with park identity that are needed to support intended park activities.
- Actions required for regulatory compliance or compliance with legal agreements.
- Activities that prevent or ameliorate threats to the health and safety of park visitors and employees.
- Activities that address inconsistencies among recreation, resource protection, and sustainable forest management, as identified through use of the Consistency Assessment checklist.

CONSISTENCY ASSESSMENT			
<i>This assessment represents a snapshot in time and may not reflect future conditions.</i>			
	Yes	No	N/A
Landscape Designation			
G.1. All development and uses of the park since 2012, or currently planned for the park, are consistent with its Landscape Designation(s).	X		
Natural Resources			
N1. All projects conducted within Priority Habitat were reviewed and approved through DCR's internal review process and by NHESP for potential impacts to rare species and their habitats.			X
N2. All projects conducted within areas subject to protection under the Wetlands Protection Acts were reviewed and approved through DCR's internal review process and by the local Conservation Commission and carried out in accordance with the terms of a valid Order of Conditions.			X
N3. Sensitive resource areas, such as steep slopes, riverbanks, streambanks, pond and lakeshores, wetlands, and dunes are free of desire paths and other user-created trails.			X
N4. Aquatic areas adjacent to beaches, boat ramps and launches, roads, and hiking trails are free of eroded sediments.			X
N5. The extent of exposed soil in campground and/or picnic sites is stable or decreasing.*			X
N6. The extent of native vegetation in campground and/or picnic sites is stable or increasing.*			X
N7. Area of trail impacts in Reserves is less than 50% of total park area. (See Naughton (2021) for information on primary area of trail impacts.)			X
N8. Congregations of breeding, migratory, or wintering wildlife are protected from disturbance by temporary (e.g., seasonal) restrictions on recreational access.			X
N9. Geocaches, letterboxes, orienteering control locations, and other discovery destinations are located outside sensitive natural resource areas and their locations have been reviewed and approved by park personnel.*	X		
N10. Zone I wellhead protection areas are free of vehicle parking, chemical storage, or concentrated recreation.			X
N11. All boat ramps and launches have cleaning stations and/or educational signs and materials on preventing the spread of aquatic invasive organisms.*			X
N12. There is a current, approved Barrier Beach Management Plan and all beach-related activities are conducted in accordance with this plan.			X
Cultural Resources			
C1. All maintenance activities and projects with the potential to cause sub-surface disturbance are being reviewed by the DCR archaeologist for potential impacts to archaeological resources.	X		
C2. All maintenance activities and projects affecting historic properties (buildings, structures, and landscapes over 50-years-old) are being reviewed by the Office of Cultural Resources to avoid adverse impacts.	X		
C3. Historic buildings, structures, and landscapes are being used, maintained, and repaired in a manner that preserves their cultural integrity and conveys their historic significance to park visitors.			X
C4. Recreational activities such as hiking, biking, and boating are not eroding cultural properties such as archaeological sites or historic landscapes through creation of desire lines, rutting in the landscape, damage to historic built features, or excessive scouring (erosion) of coastal and shoreline areas.	X		
C5. Geocaches, letterboxes, and other discovery destinations are located away from sensitive cultural resources, and their locations have been reviewed and approved by park personnel.	X		
C6. Historic buildings, structures, landscapes, archaeological sites, and concentrations of historic resources are located outside of areas predicted to be subject to flooding, storm surge, or sea-level rise.	X		

Consistency Assessment continues on next page.

CONSISTENCY ASSESSMENT			
<i>This assessment represents a snapshot in time and may not reflect future conditions.</i>			
	Yes	No	N/A
Recreation			
R1. Types of recreation, levels of recreational use, and types and extent of recreation infrastructure are consistent with the park's identity statement.	X		
R2. Trail density is consistent with the park's Landscape Designation(s). (See <i>Trails Guidelines and Best Practices Manual</i> (DCR 2019) for density thresholds.)	X		
R3. All authorized trail construction was performed in accordance with an approved Trail Proposal Form.			X
R4. Over 90% of the park's official trails network is classified as being in Fair or better condition.			X
R5. Recurring use by OHVs is restricted to authorized trails.*		X	
R6. There is a high level of compliance with dog leash regulations and policies.*		X	
R7. Athletic fields are free of recreation-caused impacts (e.g., bare spots) to turf.*			X
R8. Water-based recreation is consistent with: "Uses Attained" designation as identified by Mass DEP in its most current list of integrated waters (e.g., DEP 2021); DPH fish consumption advisories; and/or water quality testing at waterfront areas.			X
R9. Recreation facilities are located outside of areas subject to flooding, storm surge, or sea-level rise.	X		
Sustainable Forest Management			
F1. Forestry activities are consistent with Landscape Designation and associated forestry guidelines.	X		
F2. Forestry activities are consistent with current Forest Resource Management Plan.			X
F3. Tree cutting is performed in accordance with an approved cutting plan, if required under the Massachusetts Forest Cutting Practices Act (M.G.L. Ch. 132, Sections 40–46).			X

* As assessed by property manager.

Priority recommendations for Berkley State Forest. All recommendations are of equal importance.

Category	Recommendation	Implementation^a
Natural Resources	Increase the presence of park operations staff to discourage dumping and other depreciative activities.	Park Operations
Recreation	Create an official, maintained trail, in accordance with DCR's trails guidelines and best practices manual (DCR 2019), to allow visitors to explore the forest.	Park Operations
Recreation	Establish a DCR web page for Berkley State Forest.	Office of External Affairs and Partnerships
Recreation	Develop and Install a Welcome Wayside panel.	Interpretive Services, Park Operations

a. The lead party responsible for implementation is identified in bold.
