# Black Earth Compost

Syed Dong  
Regional Operations  
Former Groton Foreman

---

Before grant

Turned windrow

No suction in receiving building

Trenches in building just for liquid capture

Feedstocks

An aerial photograph of a large-scale organic waste management facility. On the left, a large white cylindrical silo stands next to a smaller white tank and various pipes. To the right of the silo is a large, dark brown rectangular pile of organic material, possibly compost or manure, with several people standing nearby. In the top right corner, a row of green and blue plastic containers is visible. The ground is a mix of dirt and sparse vegetation.

Higher control of odor  
Faster Breakdown  
Increase volume

Opportunities: organics bans, culture shift  
Challenges: space, funding, AD
