

HOMEOWNERS

APPLYING PESTICIDES

IDENTIFY THE PEST

Properly identify the pest so that you can select the best product(s) to combat the issue. If you are unable to do this then Hire A Professional.

CHOOSE WISELY

Select products that are specific to the pest and application location. Consider products that are non-toxic, low-toxic, have a short residual, and/or repellent to pollinators to minimize risk. If you need assistance, then Hire a Professional.

READ THE LABEL

Read and follow the label instructions for the product you select. Remember The Label is the Law!

APPLY CORRECTLY

Apply the product according to the label and do not allow the product to drift to other areas outside the intended treatment area.

BEE AWARE

Be aware of your surroundings to ensure that your application is applied correctly and does not drift into non-target areas with potential to impact to pollinators.

HIRE A PROFESSIONAL

Consider hiring a properly licensed pest control professional to perform applications and establish a management plan for your home and yard.
