I am interested in a Pneumatic home elevator, however it is not currently allowed in Mass. Massachusetts apparently follows a very outdated elevator code, the AMSE A17.1 version 2004.

The Pneumatic elevator complies under a newer code AMSE A17.1 version 2007. Although this elevator has proven to be a safe, economically priced solution for many homeowners throughout the United States and Internationally, the Massachusetts Department of Public Safety apparently refuses to allow this product to be installed in Massachusetts.

Over 7,000 similar units have been installed with no accidents reported. Our neighboring states such as Rhode Island, Connecticut and New Hampshire allow this product.

Can you advise when Massachusetts plans to adopt the updated 2007 AMSE version ?

Thanks !
