Mar 10, 2022

Commissioner Patrick Woodcock
MA

Dear Commissioner Woodcock,

Thank you for your hard work in implementing the 2021 Climate Roadmap Law, and for the opportunity to submit public input on the Stretch Energy Code, one of the 2021 law's most important provisions.

The climate cannot afford to wait any longer for fossil-free construction. Any structure built today with gas or oil systems will need to be retrofitted before 2050 if we're going to meet our statewide net-zero goal, at great future expense.

Please do not kick this can down the road any further. Add a provision to your new building code that allows a city or town to require fossil-fuel free construction. Our most forward-thinking cities and towns are demanding it, and I stand with them.

Once you allow cities and towns to ban fossil fuels in new construction, I will be pushing to make sure my town opts into that provision of the building code. It is this type of state and local partnership that is needed if we are going to meet our climate goals.

Sincerely,

Ms. Annette Pfannebecker

MA

Dear Commissioner Woodcock,

Thank you for your hard work in implementing the 2021 Climate Roadmap Law, and for the opportunity to submit public input on the Stretch Energy Code, one of the 2021 law's most important provisions.

The climate cannot afford to wait any longer for fossil-free construction. Any structure built today with gas or oil systems will need to be retrofitted before 2050 if we're going to meet our statewide net-zero goal, at great future expense.

Please do not kick this can down the road any further. Add a provision to your new building code that allows a city or town to require fossil-fuel free construction. Our most forward-thinking cities and towns are demanding it, and I stand with them.

Once you allow cities and towns to ban fossil fuels in new construction, I will be pushing to make sure my town opts into that provision of the building code. It is this type of state and local partnership that is needed if we are going to meet our climate goals.

Sincerely,

Mr. Christopher Cullen

Dear Commissioner Woodcock,

Thank you for your hard work in implementing the 2021 Climate Roadmap Law, and for the opportunity to submit public input on the Stretch Energy Code, one of the 2021 law's most important provisions.

The climate cannot afford to wait any longer for fossil-free construction. Any structure built today with gas or oil systems will need to be retrofitted before 2050 if we're going to meet our statewide net-zero goal, at great future expense.

Please do not kick this can down the road any further. Add a provision to your new building code that allows a city or town to require fossil-fuel free construction. Our most forward-thinking cities and towns are demanding it, and I stand with them.

I'm involved in local advocacy with Mothers Out Front in Somerville, where residents and electeds are eagerly discussing reducing methane gas dependence in our city. Once you allow cities and towns to ban fossil fuels in new construction, we can push to opt into that provision of the building code. It is this type of state and local partnership that is needed if we are going to meet our climate goals.

PS: Because it's timely, I'll also note that rising costs of oil and natural gas due to sanctions on Russia are much in the news.

Electrification is the right thing to do, not only for the climate, but for energy independence and fighting inflation of fuel prices.

Sincerely,

Ms. Maggie Benthall

Commissioner Patrick Woodcock
MA

Dear Commissioner Woodcock,

Thank you for your hard work in implementing the 2021 Climate Roadmap Law, and for the opportunity to submit public input on the Stretch Energy Code, one of the 2021 law's most important provisions.

The climate cannot afford to wait any longer for fossil-free construction. Any structure built today with gas or oil systems will need to be retrofitted before 2050 if we're going to meet our statewide net-zero goal, at great future expense.

Please do not kick this can down the road any further. Add a provision to your new building code that allows a city or town to require fossil-fuel free construction. Our most forward-thinking cities and towns are demanding it, and I stand with them.

Once you allow cities and towns to ban fossil fuels in new construction, I will be pushing to make sure my town opts into that provision of the building code. It is this type of state and local partnership that is needed if we are going to meet our climate goals.

Sincerely,

Mr. Andres Calvo

It's so important that we allow cities and towns to enforce green standards in construction. This is good for consumers who benefit from renewable energies in their homes, and good for all of us to slow climate change. When possible, I will advocate to my local government to ensure Worcester opts into these provisions of the building code. We need to work together to meet our climate goals.

The climate cannot afford to wait any longer for fossil-free construction. Any structure built today with gas or oil systems will need to be retrofitted before 2050 if we're going to meet our statewide net-zero goal, at great future expense.

Please do not kick this can down the road any further. Add a provision to your new building code that allows a city or town to require fossil-fuel free construction. Our most forward-thinking cities and towns are demanding it, and I stand with them.

Once you allow cities and towns to ban fossil fuels in new construction, I will be pushing to make sure my town opts into that provision of the building code. It is this type of state and local partnership that is needed if we are going to meet our climate goals.

Sincerely,

Mrs. Lindi Higgins

Mar 10, 2022

Commissioner Patrick Woodcock
MA

Dear Commissioner Woodcock,

Thank you for your hard work in implementing the 2021 Climate Roadmap Law, and for the opportunity to submit public input on the Stretch Energy Code, one of the 2021 law's most important provisions.

The climate cannot afford to wait any longer for fossil-free construction. Any structure built today with gas or oil systems will need to be retrofitted before 2050 if we're going to meet our statewide net-zero goal, at great future expense.

Please do not kick this can down the road any further. Add a provision to your new building code that allows a city or town to require fossil-fuel free construction. Our most forward-thinking cities and towns are demanding it, and I stand with them.

Once you allow cities and towns to ban fossil fuels in new construction, I will be pushing to make sure my town opts into that provision of the building code. It is this type of state and local partnership that is needed if we are going to meet our climate goals.

If the latest UN climate report doesn't spur you to the understanding and action needed NOW...well, I don't know what else to say. Our great state should be a leader in local goals to switch to cleaner, healthier, more climate resilient construction.

Thank you for your work and support.

J. Grigg
