Mar 17, 2022

Commissioner Patrick Woodcock
MA

Dear Commissioner Woodcock,

Thank you for your hard work in implementing the 2021 Climate Roadmap Law, and for the opportunity to submit public input on the Stretch Energy Code, one of the 2021 law's most important provisions.

The climate cannot afford to wait any longer for fossil-free construction. Any structure built today with gas or oil systems will need to be retrofitted before 2050 if we're going to meet our statewide net-zero goal, at great future expense.

Please do not kick this can down the road any further. Add a provision to your new building code that allows a city or town to require fossil-fuel free construction. Our most forward-thinking cities and towns are demanding it, and I stand with them.

Once you allow cities and towns to ban fossil fuels in new construction, I will be pushing to make sure my town opts into that provision of the building code. It is this type of state and local partnership that is needed if we are going to meet our climate goals.

Sincerely,

Ms. Susan Hale

Please do not kick this can down the road any further. Add a provision to your new building code that allows a city or town to require fossil-fuel free construction. Our most forward-thinking cities and towns are demanding it, and I stand with them.

As a scientist I have observed climate change firsthand and have seen how it has already severely altered the environment we live in and depend on for our drinking water & food, and for nature in general.

The state has to take the lead and help towns to become carbon neutral.

Housing & businesses are one of the major contributors to greenhouse gases. The state should go further by funding retrofitting of existing buildings. The crisis is now, the time to act is now!

Sincerely,

Walter Kittredge

There is great interest among people I know to have their community adopt bans in fossil fuels in new construction, once cities and towns are allowed to opt into that provision of the building code.

It is not only what is needed if we are going to meet our climate goals, but it saves money, especially when taking into account the cost savings of reducing the costs of climate change.

Mar 15, 2022

Commissioner Patrick Woodcock
MA

Dear Commissioner Woodcock,

Thank you for your hard work in implementing the 2021 Climate Roadmap Law, and for the opportunity to submit public input on the Stretch Energy Code, one of the 2021 law's most important provisions.

The climate cannot afford to wait any longer for fossil-free construction. Any structure built today with gas or oil systems will need to be retrofitted before 2050 if we're going to meet our statewide net-zero goal, at great future expense.

Please do not kick this can down the road any further. Add a provision to your new building code that allows a city or town to require fossil-fuel free construction. Our most forward-thinking cities and towns are demanding it, and I stand with them.

The construction industry in Massachusetts will not on its own move to new and innovative housing construction. Allowing towns to set building codes to drive change will help it to happen.

Sincerely,

Mr. Thomas Kelly

I'm signing onto to this message that I read about on the Mass Audubon website. I agree with them! Let's not water down the steps we need to take to ensure an ecological future for my kids, your kids, their kids, and their kids, etc etc into perpetuity. The like Indians (Navajo I think?) said, all decisions need to consider the impact on the seventh generation to follow. Let's do it! Thank you, PETER, Watertown, MA.
