Subject: We Need a Real Net-Zero Stretch Energy Code!

CAUTION: This email originated from a sender outside of the Commonwealth of Massachusetts mail system. Do not click on links or open attachments unless you recognize the sender and know the content is safe.

Commissioner, Department of Energy Resources Patrick Woodcock,

I'm writing today as a concerned Massachusetts resident about the shortcomings in the proposed stretch energy code. We are in the midst of a climate emergency that requires ending dependence on fossil fuels. We need a code that moves Massachusetts to net-zero quickly. Our survival is at stake!

In agreement with Senators Creem and Barrett, I am urging you to take the following specific actions:

1. Change the proposed stretch energy code to allow municipalities to mandate all-electric new construction.
2. Define a "net-zero building" such that each building is required to have net-zero emissions.
3. Put into writing the key features of the legislatively mandated "net-zero building performance standards" now so that legislators and the public can review and comments on them.
4. Seek genuine public input by holding additional public hearings after you revise your proposal and making sure that these hearings are more spread out in time to allow for public discussion.

Both the 2021 Climate Act and the urgent need to combat climate change call for a true net-zero stretch energy code. I am calling on you to make the substantial revisions to your proposed stretch energy code to make it truly net zero.

Sincerely,

Louis Kruger

Subject: URGENT CALL for a Net-Zero Stretch Energy Code that meets 2030 targets!

To: Secretary Kathleen A. Theoharides and DOER

----- Forwarded message -----

URGENT CALL for a Net-Zero Stretch Energy Code that meets 2030 targets!

COMMISSIONER, DEPARTMENT OF ENERGY RESOURCES PATRICK WOODCOCK,

I'm writing today as a concerned Massachusetts resident about the shortcomings in the proposed stretch energy code.

We are in the midst of a climate emergency that requires ending dependence on fossil fuels. We need a code that moves Massachusetts to net-zero quickly. Our survival is at stake!

In agreement with Senators Creem and Barrett, I am urging you to take the following specific actions:

1. Allow municipalities to mandate all-electric new construction and adaptive re-use and major renovation projects in a truly revised stretch energy code that will get us to 2030 targets.
2. Define a "net-zero building" such that each building is required to have net-zero emissions.
3. Put the key features of the legislatively mandated "net-zero building performance standards" into writing now, so that legislators and the public can review and comment.
4. Seek genuine input from MA residents. Hold additional public hearings after you revise your proposal and make these hearings more accessible in both format and time-of-day to allow for public input.

Both the 2021 Climate Act and the urgent need to combat climate change call for a true net-zero stretch energy code. I am calling on you to make the substantial revisions to your proposed stretch energy code to make it possible for Massachusetts to meet its 2030 emissions targets.

Sincerely,

Commissioner, Department of Energy Resources Patrick Woodcock,

I agree with the proposals of Senators Creem and Barrett. Effective action against climate change should not be "slow-walked." Apparently even the Baker administration knows that its proposal is too shameful to withstand the light of day. Otherwise it would not have scheduled all the hearings in one week, including on a Friday evening. Shameful indeed.

Commissioner, Department of Energy Resources Patrick Woodcock,

I'm writing today as a concerned Massachusetts resident about the shortcomings in the proposed stretch energy code. We are in the midst of a climate emergency that requires ending dependence on fossil fuels. We need a code that moves Massachusetts to net-zero quickly. Our survival is at stake!

In agreement with Senators Creem and Barrett, I am urging you to take the following specific actions:

1. Change the proposed stretch energy code to allow municipalities to mandate all-electric new construction.
2. Define a "net-zero building" such that each building is required to have net-zero emissions.
3. Put into writing the key features of the legislatively mandated "net-zero building performance standards" now so that legislators and the public can review and comments on them.
4. Seek genuine public input by holding additional public hearings after you revise your proposal and making sure that these hearings are more spread out in time to allow for public discussion.

Both the 2021 Climate Act and the urgent need to combat climate change call for a true net-zero stretch energy code. I am calling on you to make the substantial revisions to your proposed stretch energy code to make it truly net zero.

Sincerely, Adam Reeves (Roslindale)

Subject: Revisit and Revise the Net-Zero Stretch Energy Code

CAUTION: This email originated from a sender outside of the Commonwealth of Massachusetts mail system. Do not click on links or open attachments unless you recognize the sender and know the content is safe.

Commissioner, Department of Energy Resources Patrick Woodcock,

As a teacher, I work with young people every day. I want them to have a future. The Net-zero stretch code, as written, does not actually promise net-zero buildings.

Senators Creem and Barrett have alerted Commonwealth residents to the flaws in the code as currently written. Please make the following changes:

1. Municipalities must be allowed to mandate all-electric new construction.
2. A “net-zero building” must defined as having net-zero emissions.
3. Key features of the legislatively-mandated “net-zero building performance standards” must be specified in writing so that legislators and the public can review and comment on the standard.
4. Please hold additional public hearings after you revise your proposal. The hearings to allow for public discussishould be timed to allow adequate participation and discussion.

I am concerned that DOER has failed to produce what the legislature and the climate emergency require: a net-zero stretch energy code.

Sincerely,

Mary Jane Else

Subject: We Need a Real Net-Zero Stretch Energy Code! Now please!

CAUTION: This email originated from a sender outside of the Commonwealth of Massachusetts mail system. Do not click on links or open attachments unless you recognize the sender and know the content is safe.

Commissioner, Department of Energy Resources Patrick Woodcock,

I'm writing today as a concerned Massachusetts resident about the shortcomings in the proposed stretch energy code. We are in the midst of a climate emergency that requires ending dependence on fossil fuels. We need a code that moves Massachusetts to net-zero quickly. Our survival is at stake!

In agreement with Senators Creem and Barrett, I am urging you to take the following specific actions:

1. Change the proposed stretch energy code to allow municipalities to mandate all-electric new construction.
2. Define a "net-zero building" such that each building is required to have net-zero emissions.
3. Put into writing the key features of the legislatively mandated "net-zero building performance standards" now so that legislators and the public can review and comments on them.
4. Seek genuine public input by holding additional public hearings after you revise your proposal and making sure that these hearings are more spread out in time to allow for public discussion.

Both the 2021 Climate Act and the urgent need to combat climate change call for a true net-zero stretch energy code. I am calling on you to make the substantial revisions to your proposed stretch energy code to make it truly net zero.

Sincerely,

Robert Heinzman

Commissioner, Department of Energy Resources Patrick Woodcock,

Dear Commissioner Woodcock,

I am writing to urge you to strengthen the stretch code to make it possible for cities like Brookline to require new buildings to be net-zero carbon ready. I realize our electric generation production needs to be turned more to renewable sources before anything is really net-zero if it's on the grid, but hopefully, that will be happening sooner than later. In the meantime, we need to build out new construction that is heavily insulated and where heating, cooling, and cooking are done electrically.

As a mother and grandmother, I am very concerned about the future health of our planet. I want a world in which future generations can live on comparative peace and comfort. I see the ramping up of the climate emergency every year and no concerted government response to stop it. It will take every town, state, and country working together to avert catastrophe.

In agreement with Senators Creem and Barrett, I am urging you to take the following specific actions:

1. Change the proposed stretch energy code to allow municipalities to mandate all-electric new construction.
2. Define a "net-zero building" such that each building is required to have net-zero emissions.
3. Put into writing the key features of the legislatively mandated "net-zero building performance standards" now so that legislators and the public can review and comment on them.

Commissioner, Department of Energy Resources Patrick Woodcock,

I am a citizen deeply concerned by the death and destruction of the Russian war in Ukraine fought with oil/natural gas/mining wealth. The drilling, mining, and fracking that poison the air, water, land/trees/plants/ food supply, fish, animals and human beings. I see the fires, flooding, landslides, droughts, storms, famine, suffering, poverty for so much of the world. Please be the political voice for sanity and lead with the responsibility for seven generations to come as Native Americans teach! I'm writing today as a concerned Massachusetts resident about the shortcomings in the proposed stretch energy code. The recent update from the IPCC makes it more than abundantly clear that we are in the midst of a CLIMATE CATASTROPHE and that we can no longer afford half measures or less to mitigate - forget about reversing - this trend. This proposed code gives our state a straightforward way to have a major impact on home energy costs and impacts. It would put

the interests of Massachusetts citizens and the Planet ahead of the profits of the building industry, for a change.

Both the 2021 Climate Act and the urgent need to combat climate change call for a true net-zero stretch energy code. I am calling on you to make the substantial revisions to your proposed stretch energy code to make it truly net zero.

Commissioner, Department of Energy Resources Patrick Woodcock,

I'm writing today as a concerned Massachusetts resident about the shortcomings in the proposed stretch energy code. We are in the midst of a climate emergency that requires ending dependence on fossil fuels. We need a code that moves Massachusetts to net-zero quickly. Our survival is at stake!

In agreement with Senators Creem and Barrett, I am urging you to take the following specific actions:

1. Change the proposed stretch energy code to allow municipalities to mandate all-electric new construction.
2. Define a "net-zero building" such that each building is required to have net-zero emissions.
3. Put into writing the key features of the legislatively mandated "net-zero building performance standards" now so that legislators and the public can review and comments on them.
4. Seek genuine public input by holding additional public hearings after you revise your proposal and making sure that these hearings are more spread out in time to allow for public discussion.

Both the 2021 Climate Act and the urgent need to combat climate change call for a true net-zero stretch energy code. I am calling on you to make the substantial revisions to your proposed stretch energy code to make it truly net zero.

Sincerely,

Cheyenne Robair

Commissioner, Department of Energy Resources Patrick Woodcock,

I'm writing today as a concerned Massachusetts resident--a retiree from the state university system--about the shortcomings in the proposed stretch energy code. We are in the midst of a climate emergency that requires ending dependence on fossil fuels. We need a code that moves Massachusetts to net-zero quickly. I am going to be OK in my lifetime but I am concerned about my kids and grandkids, decades from now.

I agree with communication you recently received from Senators Creem and Barrett. Please take the following actions:

1. Change the proposed stretch energy code to allow municipalities to mandate all-electric new construction.
2. Define a "net-zero building" such that each building is required to have net-zero emissions.
3. Put into writing the key features of the legislatively mandated "net-zero building performance standards" now so that legislators and the public can review and comments on them.

Commissioner, Department of Energy Resources Patrick Woodcock,

I'm writing today as a concerned Massachusetts resident about the shortcomings in the proposed stretch energy code. We are in the midst of a climate emergency that requires ending dependence on fossil fuels. We need a code that moves Massachusetts to net-zero quickly. Stand with science: Our survival is at stake!

In agreement with Senators Creem and Barrett, I am urging you to take the following specific actions:

1. Change the proposed stretch energy code to allow municipalities to mandate all-electric new construction.
2. Define a "net-zero building" such that each building is required to have net-zero emissions.
3. Put into writing the key features of the legislatively mandated "net-zero building performance standards" now so that legislators and the public can review and comments on them.
4. Seek genuine public input by holding additional public hearings after you revise your proposal and making sure that these hearings are more spread out in time to allow for public discussion.

Both the 2021 Climate Act and the urgent need to combat climate change call for a true net-zero stretch energy code. I am calling on you to make the substantial revisions to your proposed stretch energy code to make it truly net zero.

Sincerely,
Sarah Vandewalle, Everett

Commissioner, Department of Energy Resources Patrick Woodcock,

The climate crisis is real and taking place all around us. We don't have time. We have to stop burning fossil fuels yesterday, considering the time lags built into the warming cycle. Let's not build more stock for the next hundred years that will continue how we've done it for the last 100 years, before we knew what was coming.. The possibility of green electric is real, gas or oil can never be.

In agreement with Senators Creem and Barrett, I am urging you to take the following specific actions:

1. Change the proposed stretch energy code to allow municipalities to mandate all-electric new construction.
