Commissioner Patrick Woodcock
MA

Dear Commissioner Woodcock,

Thank you for your hard work in implementing the 2021 Climate Roadmap Law, and for the opportunity to submit public input on the Stretch Energy Code, one of the 2021 law's most important provisions.

The climate cannot afford to wait any longer for fossil-free construction. Any structure built today with gas or oil systems will need to be retrofitted before 2050 if we're going to meet our statewide net-zero goal, at great future expense.

Please do not kick this can down the road any further. Add a provision to your new building code that allows a city or town to require fossil-fuel free construction. Our most forward-thinking cities and towns are demanding it, and I stand with them.

Once you allow cities and towns to ban fossil fuels in new construction, I will be pushing to make sure my town opts into that provision of the building code. It is this type of state and local partnership that is needed if we are going to meet our climate goals.

With 33years as a General Contractor and Green Builder, and having completed numbers net-zero new residences for my customers, it is obvious that all-electric low-load homes are not only essential for our climate but the most financially rewarding residences for the owners.

The details and methods required to build ultra low load all electric homes are not difficult or overly complicated, but in fact are essential skills for builders to master in todays market.

Sincerely,
Richard Karsten

We anticipate your assistance in furthering the passage of the Stretch Energy Code as the regulations may play a significant role in the future reduction of fossil fuels to heat the typically aging housing stock, particularly in our rural Berkshire hill towns and villages. We may look "charming," but burn one heck of a great deal of oil and gas to get through the winter!

Thank you for your hard work in implementing the 2021 Climate Roadmap Law, and for the opportunity to submit public input on the Stretch Energy Code, one of the 2021 law's most important provisions.

The climate cannot afford to wait any longer for fossil-free construction. Any structure built today with gas or oil systems will need to be retrofitted before 2050 if we're going to meet our statewide net-zero goal, at great future expense.

Please do not kick this can down the road any further. Add a provision to your new building code that allows a city or town to require fossil-fuel free construction. Our most forward-thinking cities and towns are demanding it, and I stand with them.

We need government to set rules that encourage towns and industry to do what's right for the greater good. Thank you.

Sincerely,

Ms. Tricia Crockett

Home builders almost always take the path of least resistance when planning their structures. It is only through legislation that real progress can be made to change habits and expectations. I'd certainly support fossil-free construction in my town, although it will be a long battle against assumptions and prejudices. Please do your part to help make these changes possible.

Thank you.

The climate cannot afford to wait any longer for fossil-free construction. Any structure built today with gas or oil systems will need to be retrofitted before 2050 if we're going to meet our statewide net-zero goal, at great future expense.

Please do not kick this can down the road any further. Add a provision to your new building code that allows a city or town to require fossil-fuel free construction. Our most forward-thinking cities and towns are demanding it, and I stand with them.

Once you allow cities and towns to ban fossil fuels in new construction, I will be pushing to make sure my town opts into that provision of the building code. It is this type of state and local partnership that is needed if we are going to meet our climate goals.

Sincerely,

Mr. John Wallace

It has been very disheartening to see my town with it's 'infill policy' approving the building of multiple dwellings without regard to climate change! Multiple dwellings on lots where once a single home existed.

Developers making big bucks with No Concerns For The Future of Our Environment.
