OUTDATED SOFTWARE AND OPERATING SYSTEMS CAN MAKE YOUR SYSTEM VULNERABLE TO CYBERATTACKS

BEST PRACTICES FOR SOFTWARE UPDATES

Keep your system hardware, software and operating system up-to-date
Updates often contain important security components which protect your system from viruses and hackers.

Keep automatic software updates enabled whenever possible
This will ensure that software updates are installed as quickly as possible.

Never install unknown or unsolicited software on your computer
Always visit vendor sites directly rather than clicking on advertisements or email links.

Anti-Malware Protection
Install the latest version of anti-malware protection. Routinely run a complete scan of your system to check for any malware infections.

Firewalls
Always keep the desktop firewall ON.

Avoid software updates while using untrusted networks.
