

**Massachusetts Department of Conservation and Recreation  
Division of Water Supply Protection, Office of Watershed Management  
*Forest Management Project Summary***

**Project Title:** Beaudin Lot  
DWSP Harvest Permit Number: 3164  
DWSP Proposal ID: PR-19-18  
DCR Forest Cutting Plan File Number: 204-23723-20

***Site Information***

Watershed: Quabbin  
Town(s): New Salem  
Acres: 74  
Nearest Road: Route 202, Cooleyville Rd. (Gate 17)  
Natural Heritage Atlas overlap?: No  
Public Drinking Water Supply Watershed?: Yes  
Forest Types: White Pine, Red Pine and Mixed Oak  
Area of Critical Environmental Concern (ACEC)?: No  
Soils: Canton-Chatfield-Hollis complex, Montauk fine sandy loam  
Wetland Resources: No  
Vernal Pools: No

***Harvest Information***

Harvest Start Date: March 25, 2020  
Harvest End Date: June 30, 2020  
Number of Wetland Crossings: 0  
Number of Stream Crossings: 0

***Best Management Practices Applied***

Stream Crossings: Not Applicable  
Filter Strips: One variable width  
Wetland Crossings: Not Applicable  
Harvesting in Wetlands: Not Applicable

***DWSP Forester supervising this harvest***

Name: Derek Beard  
Forester License number: 14  
Phone number: 617-780-0631  
Email: derek.beard@mass.gov

## **Narrative**

### ***General Description/Forest Composition/History***

The project heads west from Gate 17 Rd. (Cooleyville Rd.) over a height of land to an inoperable west facing slope. The area is bounded by Pelham Rd to the south and Atkinson Hollow Rd to the north.

High canopy white pine is the dominate forest cover. Quality varies with aspect, although taller, east facing pine has a wider range of quality then west facing timber. The east face is also very close to gate 17 Rd; an old thoroughfare dotted with cellar holes whose past inhabitants modified/enriched/tilled the soil for crop production. Generally white pine growing on higher quality sites develops fast and attracts weeviling (insect that kills terminal leader) which greatly effects tree form (lumber potential). In addition to being mixed in with the east facing white pine, there is a 4 acre sawtimber size red pine plantation. Beginning in the late 2000s a portion of the plantation started to succumb to red rot (*Heterobasidion annosum*); a common fungus that afflicts dense softwood stands. More recently there has also been mortality from red pine scale. In addition to red pine are small inclusions of sugar maple and aspen. The sugar maple area is a sugar bush; a grove of maple trees that are tapped for sap to produce maple syrup.

From east to west, associated hardwoods are white ash, maples, black birch, cherry and red oak; and transition to mixed oak (red, black, white and scarlet) black birch, red maple and hickory. A 1997 early stage shelterwood harvest triggered what is now mostly a black birch sapling layer. Unfortunately, most of the white pine regeneration was shaded out by overstory and faster growing birch regeneration; Furthermore, most of the hemlock regeneration has been mortally browsed.

Invasive species such as Barberry and Asiatic Bittersweet radiate west (a few hundred feet) from gate 17 road. Control of sorts, particularly post-harvest, will be critical to successful regeneration of native species.

### ***Site Selection***

The primary goal of the watershed forest management program is to create and maintain a forest that provides high quality drinking water to current and future users. In order to achieve this, DWSP has determined that the forest should contain a diversity of species in various stages of development (seedlings through large legacy trees). In addition, the forest should be vigorous; actively growing and regenerating. Forest in this condition is ideally suited to be resilient to and quickly recover from small to large scale disturbances such as disease, insect infestation, ice storms and hurricanes.

### ***Silvicultural Objectives***

The multi-pronged goal includes: One - salvage the remaining red pine; two – release/initiate a quantifiable regeneration layer and three improve the overall quality of the white pine overstory.

This will be accomplished by removing all live red pine along with lower quality white pine (11 acres); along with seven well distributed openings encompassing a total of nine acres. Openings range between 1 and 1.6 acres in size.

***Cultural Resources***

Right along the 17 road are a cellar hole and several barn foundations. Up slope from one of the barn foundations is a field stone lined well. Along with the cellar holes/barn foundations are numerous stone walls, a legacy of land's agrarian past.

***Rare or Endangered Species***

According to the latest edition of the MA Natural Heritage & Endanger Species Atlas, the project does not overlap with any estimated or critical habitat area.

Landowner

**Landowner Signature**

The most important information on a cutting plan is the Landowner's objective, as this will determine which trees will be harvested and which will remain; this decision will also determine the future condition of the forest for decades to come. After having read the Massachusetts Forest Cutting Plan Information Sheet on page one, indicate your objective by checking the appropriate box below.

**LT - Long-term Forest Management**

Planned management of the forest to achieve one or more of the following objectives: produce immediate and maximize long-term income, enhance wildlife habitat, improve recreational opportunities, protect soil and water quality, or produce forest specialty products.

**ST - Short-term Harvest**

Harvest of trees with the main intention of producing short-term income with minimal consideration given to improving the future forest condition, which often results in a forest dominated by poor quality and low value species.

I (we) have read the Massachusetts Cutting Plan Information Sheet, and am aware of my (our) management options.

I (we) hereby certify that I (we) have the legal authority to carry out the operation described above.

I (we) certify that I (we) have notified the Conservation Commission in the town in which the operation is to take place and the abutters of record within two hundred feet of the area to be harvested.

I (we) understand that the volumes in this plan have not been independently verified by the service forester

upon approval and will report final values and volumes to the Director or his/her agent if the final figures differ from those reported.

BMIPs

Use this Section to provide further explanation or if Other (OT) was used in any category in the Best Management Practices Section on Page 3.

Twenty acres of the 74 acre area are being treated. Seven openings encompass a total of nine acres. Openings range between 1 and 1.6 acres in size. All openings have live tree retention as well as live and dead snags (valuable wildlife habitat). The remaining treatment area (11 acres) is mainly dedicated to salvaging dying red pine; a secondary focus in this area is thinning poor quality white pine. Harvest stands are marked with blue paint and skid roads are marked with orange paint.

Designation of Trees

Use this Section to describe the types of trees to be harvested and/or retained if Other (OT) was used for "Designation of Trees" in the Stand Treatment Section on page 4. Additional narrative description may be added on a separate page.

Stand No.	Describe Trees to be Cut			Describe Trees to be Left			% BA/AC	
	Species	Size	Quality	Species	Size	Quality	Cut	Left

Regeneration & Future Condition

Use this Section to describe how Chapter 132 requirements will be met if a non standard system (HG, DL, or OT) was used for the "Type of Cut" in the Cutting Standards Section on page 4.

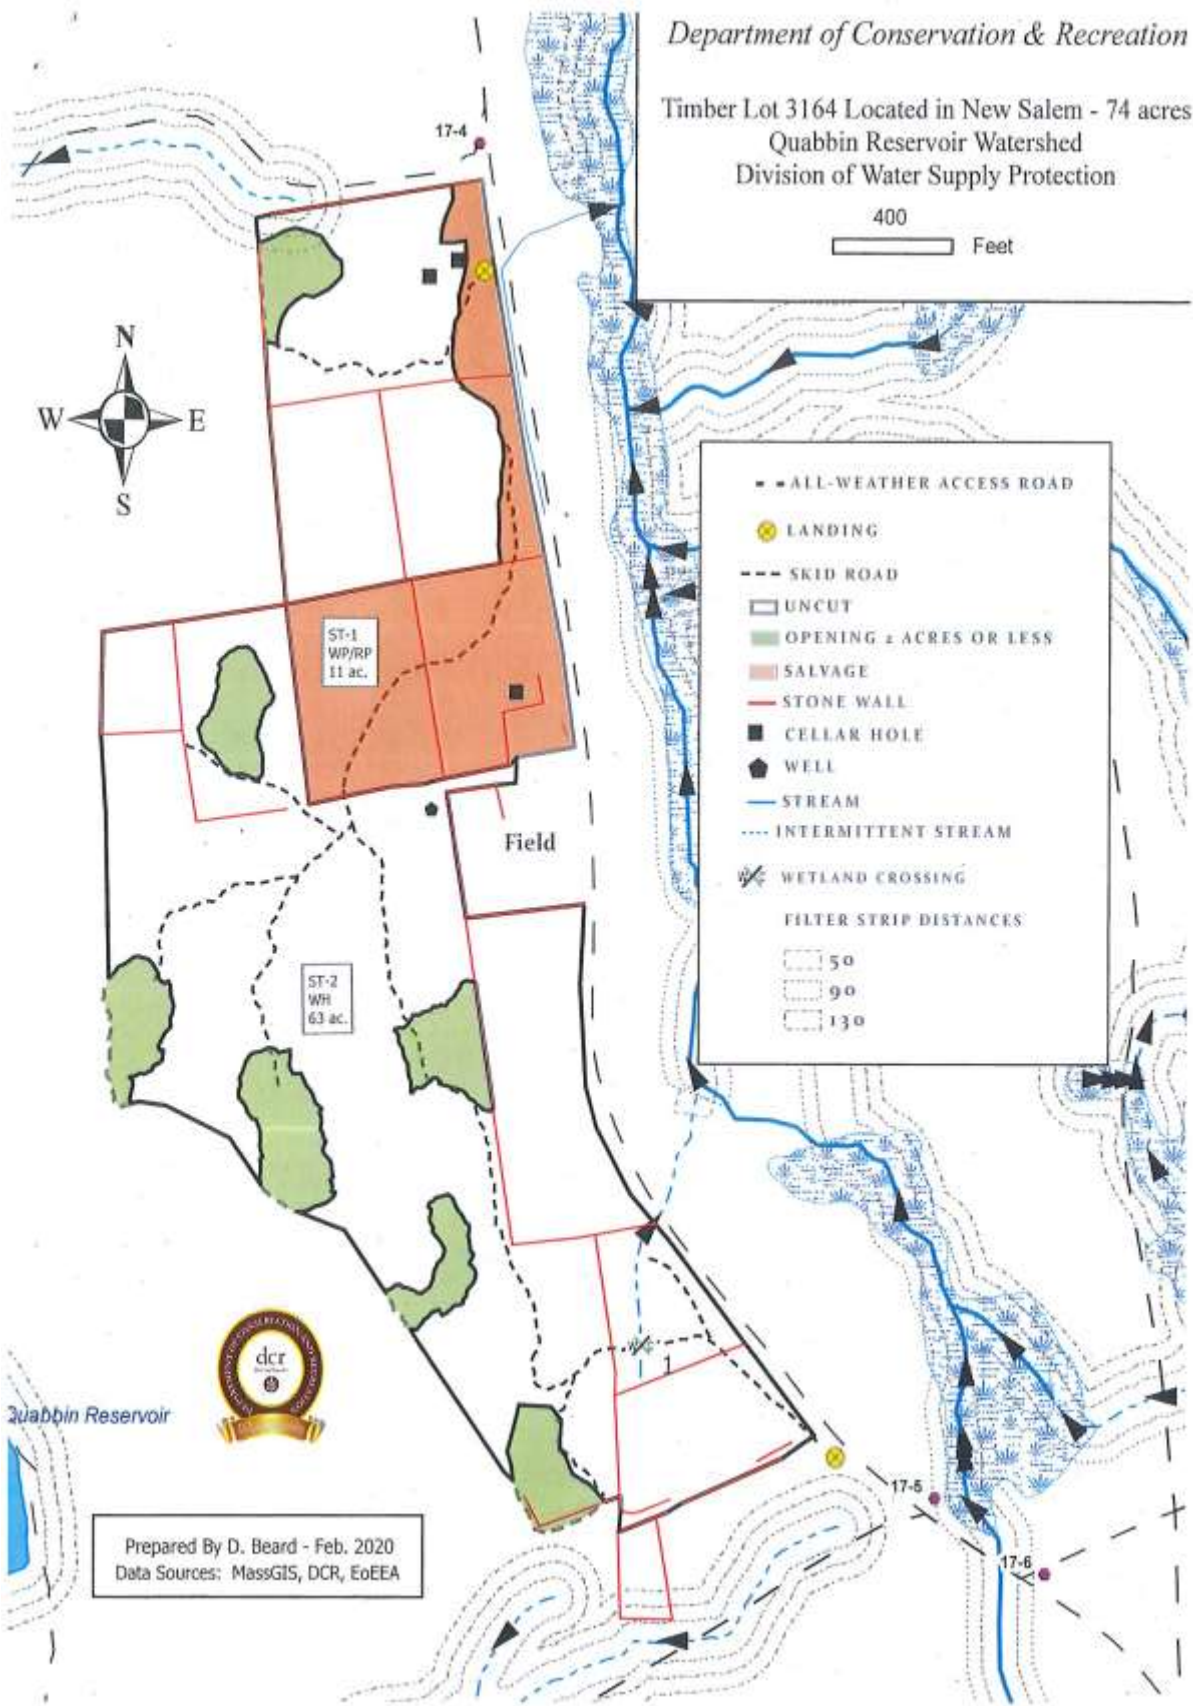

Stand No.	Source of Regeneration (ex. AD, SE )	How will Regeneration be obtained/protected? If using AD - Describe the species present and how the regeneration will be protected If using SE - Describe the source of the seed and the number of seed trees/acre
-----------	---	--

Stand No.	Desired Future Condition Describe what the stand is expected to look like five years from the harvest, including the condition of the overstory & understory
