

Massachusetts Department of Conservation and Recreation
Division of Water Supply Protection, Office of Watershed Management
Forest Management Project Summary

Project Title: Lot 5308

DWSP Harvest Permit Number: 5308

DWSP Proposal ID: WA-23-242

DCR Forest Cutting Plan File Number: 134.42931.25

Site Information

Watershed: Wachusett

Town(s): Holden

Acres: 52

Nearest Road: Princeton Street

Natural Heritage Atlas overlap?: Yes

Public Drinking Water Supply Watershed?: Yes

Forest Types: Mixed oak, White pine, Northern Red Oak

ACEC?: No

Soils: Hinckley loamy sand, Merrimac loamy sand, various silt loams.

Wetland Resources: There's a narrow wetland associated with the Quinapoxet River.

Vernal Pools: There's a vernal pool near the previously mentioned narrow wetland.

Harvest Information

Harvest Start Date: 09/25/2024

Harvest End Date: 12/14/2028

Number of Wetland Crossings: Two

Number of Stream Crossings: One

Best Management Practices Applied

Stream Crossings: This is the culverted crossing of Bear Brook on the old railroad bed.

Filter Strips: There's a variable-width filter strip associated with Bear Brook and the Quinapoxet River. No trees are being cut in either filter strip.

Wetland Crossings: Both wetland crossings will utilize swamp mats.

Harvesting in Wetlands: None

DWSP Forester supervising this harvest

Name: Greg Buzzell

Forester License #: 025

Phone #: 774-261-1841

Email: greg.buzzell@mass.gov

NARRATIVES

General Description/Forest Composition/History:

This area is divided in two by a wetland that extends south from the Quinapoxet River. The larger western part is dominated by oaks. In the higher and drier parts, red oak, black oak, red maple and white oak predominate in the overstory with patches of mountain laurel, lowbush blueberry, hazelnut and witch-hazel in the understory. Where it's lower and a bit damper, red oak dominates the overstory with a witch-hazel, hazelnut, mountain laurel and maple-leaved viburnum shrub layer. In the mixed hardwood stand at the toe of the slope abutting the Quinapoxet River there is red oak, red maple and yellow birch in the overstory with scattered sugar maples. On the west-facing slope immediately adjacent to Bear Brook there are a few hemlocks and hobblebush and striped maple in the understory.

There is evidence of past logging only in the western half of this western portion which was purchased in 1997. There are very old stumps and multi-stemmed red maples only in the higher drier area adjacent to the aqueduct right-of-way. Otherwise, there are single-stemmed red oaks of good to excellent quality throughout this area. There are some very old looking white oaks at the top of a slope that have barbed wire in them.

The smaller eastern part of this sale area is dominated by white pines in the overstory that were planted in 1919. There's a group of large white oaks in the middle of this area that have an open-growth form indicating that they pre-date the planting of the pines. The understory shrub layer is comprised of hazelnut, witch-hazel, mountain laurel and maple-leaved viburnum. The mountain laurel is very thick on the west-facing slope near the wetland.

There is excellent advance regeneration throughout this entire sale area but particularly in the eastern portion under the white pine stand. It's almost entirely comprised of hardwood species especially red oak, red maple, white oak, yellow birch and black cherry. In the western part, it's made up of red maple, red oak, white pine and American chestnut.

The age structure of this working unit is currently as follows: 0%, 0-20 years old; 0%, 21-40 years, 0%, 41-60 years; 9%, 61-80 years; 14%, 81-100 years and 77%, >100 years old. A narrow band of mixed oak forest near the base of the hill at the confluence of Bear Brook and the Quinapoxet River originated in about 1880 making it about 144 years old.

Site Selection:

The ideal watershed protection forest is one which best serves the function of the land as a producer of high quality drinking water in both short- and long-term. This forest must be vigorous and diverse in tree species and ages, be actively accumulating biomass and actively regenerating. Such a forest will be ideally suited to be resilient to and quickly recover from small- and large-scale disturbances such as diseases, insect infestations, ice storms and hurricanes.

Silvicultural Objectives:

With the excellent and diverse understory of saplings that are well suited to this site, a new age class will be created in this forest. This will be accomplished through the removal of the overstory in patches that range in size from 0.75 acres to 2 acres and total 11.8 acres. Given the species composition of the regeneration, this new age class will have a similar diversity to the overstory although the relative amounts of each species will change especially with there being less white pine.

Cultural Resources:

The Quinapoxet Mills was located on the north side of Mill St. and it gave this former village of Holden the name Quinapoxet. There is a borrow pit in the side of the hill at the west end of where the dam was located. There is another borrow pit immediately adjacent to Mill Street just on the west side of the Quinapoxet River bridge.

Wildlife/Rare or Endangered Species:

NHESP has determined that certain state-listed sensitive species or habitats may exist within the lot proposal area. To protect them from unnecessary disturbance, detailed information regarding affected species and their locations is not included in this report. DWSP will coordinate with NHESP and follow recommendations to protect these species during the proposed activity.

Landowner Signature

The most important information on a cutting plan is the Landowner's objective, as this will determine which trees will be harvested and which will remain; this decision will also determine the future condition of the forest for decades to come. After having read the Massachusetts Forest Cutting Plan Information Sheet on page one, indicate your objective by checking the appropriate box below.

LT - Long-term Forest Management

Planned management of the forest to achieve one or more of the following objectives: produce immediate and maximize long-term income, enhance wildlife habitat, improve recreational opportunities, protect soil and water quality, or produce forest specialty products.

ST - Short-term Harvest

Harvest of trees with the main intention of producing short-term income with minimal consideration given to improving the future forest condition, which often results in a forest dominated by poor quality and low value species.

I (we) have read the Massachusetts Cutting Plan Information Sheet, and am aware of my (our) management options.

I (we) hereby certify that I (we) have the legal authority to carry out the operation described above.

I (we) certify that I (we) have notified the Conservation Commission in the town in which the operation is to take place and the abutters of record within two hundred feet of the area to be harvested.

I (we) understand that the volumes and values (Ch61 only) in this plan have not been independently verified by the service forester upon approval and will report final values and volumes to the Director or his/her agent if the final figures differ from those reported.

Landowner: DCR/DWSP/DWM

Wachusett/Sudbury

Town: W. Boylston

File Number: 134.42931.25

Use only if further explanation is required of information on pages one or two or if "other" was used in any category.

BMPs	<p><u>SC-1 is an existing culverted crossing on the abandoned railroad bed which is now a forest road and rail trail.</u></p> <p><u>WC-1 is the narrow outflow from a large seep. It will be bridged.</u></p> <p><u>WC-2 will be crossed with swamp mats.</u></p>
Silviculture	<p><u>In order to release advance regeneration, 10 openings in the overstory are being created, covering 11.8 acres. These openings range from 0.75 acre to 2 acres in size with an average of 0.9 acres. They are well distributed throughout the area taking advantage of the advance regeneration comprised of white pine, oaks, and other hardwoods.</u></p>
Object	<p><u>The objective of this operation is to diversify the age structure of the forest by removing the overstory in patches thereby releasing the advance regeneration. The current age structure is limited with an insufficient component of young forest.</u></p>
Other	<p><u>Haul roads have been flagged.</u></p> <p><u>No trees are being cut in ST-4.</u></p> <p><u>Trees are only being cut within the 10 overstory removal patches and of course, as needed at the landing and along haul roads.</u></p> <p><u>Portions of the sale area are within NHESP Priority Habitats of Rare Species polygon PH 1337.</u></p>
