TIPS FOR SAVING WATER
When in Drought or Not – Please Do Your Part!

1. LIMIT LAWN WATERING, ESPECIALLY DURING A DROUGHT
   Lawns naturally go dormant during dry conditions. They’ll revive when conditions improve.
   - If you are in a region at Drought Level 3, Critical Drought (Severe Drought Conditions) or Drought Level 4, Emergency Drought: Do not water your lawn.
   - If you are in a region at Drought Level 2, Significant Drought (Moderate to Severe Drought): Limit watering to hand-held only or drip irrigation. Water after 5PM or before 9AM to avoid evaporative losses.
   - If you are in a region at Drought Level 1, Mild Drought (Abnormally Dry Conditions): Limit watering to 1 day per week at most. Water after 5PM or before 9AM.

2. MINIMIZE LANDSCAPE WATER NEEDS THROUGH WATER-SMART LANDSCAPING PRINCIPLES
   - Maintain healthy soils (a minimum of 6-inches in depth, where possible).
   - Choose native plants or plants and turf that need less water.
   - Use mulch to reduce evaporation and moderate soil temperature.
   - Leave grass clippings on lawn to shade and return nutrients to soil.

3. MINIMIZE YOUR USE OF WATER OUTDOORS
   - Sweep driveways, walks, patios, and other outdoor areas with a broom rather than hosing them off.
   - Wash vehicles using a bucket and sponge, employing a hose with a shut-off nozzle for rinse only, or, if available, use a commercial car wash that recycles water (most do).
   - Cover swimming pools when not in use to prevent evaporation.

1 Certain water uses are not subject to mandatory restrictions, such as water used: for health or safety reasons; for the production of food and fiber; for the maintenance of livestock; to meet the core functions of a business (for example, irrigation by plant nurseries as necessary to maintain stock).
